Global Manufacturing Production
November 2023

**Global manufacturing**

Global index of manufacturing production

Index 2015 = 100

- 2021
- 2022
- 2023

- Year-over-year growth of global production, showing a gradual acceleration after months of stagnation.

**Regional performance**

Year-over-year growth rate of manufacturing production by region

Industrial production in China remained growing at a fast pace, while most other world regions faced output reductions.

**Sectoral trends**

Global index of manufacturing production by technology level

Sustained progress in higher-technology industries, while other industries struggled with a stagnant production:
- **Medium-high and high tech**: 4.2%
- Other manufacturing industries: -0.5%

Global performance of higher-tech industries

Recent performance of higher-tech industries showed volatility: **Other transport equipment** recorded the highest increase in monthly comparison, while **machinery** experienced another significant output drop.

**Note:** This report is based on seasonally-adjusted series of official indices of industrial production (IIPs). Data used to create the infographic can be downloaded [here](link). The full database of monthly IIPs can be accessed through the UNIDO Data Portal. Methodological details can be found in [this document](link).
