4. Management information UCPI
5. Management info, Radiola-Toshiba Philippines, Inc.
6. Management information, World-Wide Paper Mills Inc, Baler Plant
7. Management information, Aircon Incorporated
8. Three-day program for on-the-spot consultation
9. The Productivity and Development Center; Seminar on Work Study, List of Participants
10. A short Talk to the Work Study Seminars on Value Analysis
11. Philippino Counterparts during Expert's visits to some local companies
12. On-the-Spot Plant Guidance Projects
13. UCPI on-the-job training
14. Value Analysis, conducted by Mr. Pentti Söderlin at Radiola-Toshiba Philippines, Inc. - Oct. 29 - 31, 1970
15. WPMI - BALER, Problem: How to shorten shutdown time
16. Aircon Incorporated: On-the-job training
17. Seminar on Value Analysis November 11 to 14, 1970  
List of Participants
18. Seminar outline
19. V.A. Seminar Material
20. Value Analysis Seminar Projects

**THE PURPOSE OF THE REPORT**

The subject of the report is to describe:

- the project as stated
- the practical execution
- the recommendations made for future activities

THE PROJECT AS STATED

The purpose of the project was to provide "Expert Advice on Industrial Management - Value Analysis".

Contract No. 70/61, paragraph 1.02, contains the following information:

The Contractor's expert, in consultation with the Philippine's Productivity and Development Center in Manila, shall:

- a) Conduct a seminar on value analysis with a major objective of attaining a product service that would provide the highest value and quality commensurate to the specific need and price paid by the consumer or user.
- b) Give short-talks to selected groups on value analysis, cost reduction and other related topics.
- c) Conduct a consulting service and on-the-spot plant guidance to some selected local enterprises.

### THE PRACTICAL EXECUTION

The project can be divided into four stages:

#### 1. Preparatory

After arriving in Manila a month ahead of the expected schedule of the Philippines's Productivity and Development Center (PDC) the first task was to plan the field activities. The schedule is in annex 1. Due to the short notice of expert's arrival four companies were selected for the on-the-spot consulting service from a total number of 44 "Productivity cell" members of the PDC. The practical arrangements to use these companies as pilot plants for promoting interest into Value Analysis was handled by PDC. The list of the companies selected is in annex 2.

#### 2. Management information and short talks on Value Analysis and other cost reduction techniques

The procedure in the selected companies was twofold: First: To inform the management of the Value Analysis concept, their responsibility involvement and expected profits. Further to tell them where it fits in, and to illustrate experience from various fields of business by viewgraphs and slides. Second: To select some pilot project(s) for practical introduction of Value Analysis in the company. The topics for management information are in annex 3. The participants of the Management information are in annexes 4-7. The 3-day program used in these companies is in annex 8.

Separate short talks on Value Analysis were given to a Work Study Seminar, the list of participants is in annex 9 and the topics in annex 10.

In addition Value Analysis was the main topic during visits to:

1. Asian Institute of Management
2. Philippines Council of Management
3. Management Development Institutes Association

3. Consultant service an on-the-spot plant guidance to some selected local enterprises

The on-the-spot plant guidance was given

- to guide the actual project work in the company
- to give guidance to the local PDC consultants in doing V.A. work (see annex 11).
- to gain some savings applying V.A. under consultant advice to specific products, processes, services or problems.

After orientation and management information of Value Analysis the next step was to find some potential objectives for Value Analysis exercise.

From the proposed objectives the following were selected for respective companies as stated in annex 12.

The procedure during the on-the-job training is as follows:

1. Objective Finding
2. Fact Finding
3. Problem Finding
4. Idea Finding
5. Solution Finding
6. Acceptance Finding

During the plant visits, however, it was not always possible, due to the short visiting time, to find the necessary facts where information was not available.

In the various plants the approaches were as described in annexes 13, 14, 15 and 16. As a result from these exercises it was possible to propose to the companies savings worth total P 127,550/annually or \$ 20,400/annually.

#### 4. Value Analysis Basic Workshop Seminar

The main purpose of the project was to conduct a seminar on Value Analysis. The fact that Asian Productivity Organization had planned this seminar for November 23 to November 27 caused extra arrangements to inform especially those foreign participants about the advanced schedule. However, it was possible to conduct the seminar on November 11 to November 14 with total 36 participants of which 4 were foreigners. The list of participants is in annex 17.

The purpose of a Basic Workshop Seminar is to:

- Teach the V.A. philosophy and methodology
- Give experience in applying V.A. principals in real projects
- Promote creative thinking
- Create teamwork attitude
- Encourage a new way of thinking

The duration of the seminar was four days and was divided between lectures and practical work. The seminar outline is in annex 18.

For the seminar participants a Value Analysis Seminar Book consisting of 32 pages and a Value Analysis Work Book of 29 pages plus some additional material mainly checklist were handed out as scated in annex 19.

During the seminar the topics were illustrated by case studies both foreign and local (by Mr. Mario Cabanero, who acted as assistant during the seminar). For practical team work the seminar participants were divided into 6 teams and a project for each team had been prepared.

A practical illustration of seminar projects is in annex 20. As a result the teams could propose savings worth total P 77,530 - P 89,290 annually or US\$ 12,400 - 14,300 annually if we exclude the project of teams Nos. 5 and 6, which has been realized beforehand and used as a V.A. exercise only.

### RECOMMENDATIONS

Considering the short assignment time and experience gained before from similar tasks the following actions are recommended:

1. Provide additional expert advice to follow-up the project started, (1-2 months within 6-8 months). Task: First to visit on-the-spot plants and to ensure the progress and if necessary to promote V.A. activities. Second: To conduct additional V.A. seminar.
2. When starting new Value Analysis programs the following procedure is recommended in installing Value Analysis into the company.

#### Program phases

- |   |                               |
|---|-------------------------------|
| 1. Orientation                              | First visit                   |
| 2. Value Analysis Basic<br>Workshop seminar | Second visit                  |
| 3. Follow-up and organizing<br>V.A.         | Third, fourth and fifth visit |

It is advisable to concentrate one company at the time. These visits 2-3 weeks each should be spread over 6-12 months calendar time.

3. If possible arrange similar training projects to other Asian countries as requested by the seminar participants

- Mr. Bahram Sadri

Head of Industrial Engineering Department  
Industrial Management Institute  
437, Takhte Jamshid Ave, Iran  
and

- Mr. Lam Koon-Wai

Management/Technology Trainer  
Hongkong Productivity Center  
Gloucester Building, Hongkong  
and

- Mr. Bok Hynn Yoon

Managing Director

Korea Productivity Center, 10, 2-Ka, Pildong, Seoul, Korea

### SUMMARY

The primary task to:

- Conduct a seminar on Value Analysis
- Give short talks on Value Analysis
- Conduct a consulting service and on-the-spot plant guidance

has been completed.

The field activities have resulted in some companies in saving proposals worth total US\$ 32,800 - 34,700 and due to the seminar and short-talks further interest in Value Analysis has been promoted. Further during the assignment some local counterparts from various organizations have received training during plant visits thus ensuring multiply effect from the expert's visit.

Considering the fact that labour costs in developing countries are generally very low the major cost factor in industry being material and overhead cost, the local counterparts and the managements of the visited companies were convinced about the new approach of Value Analysis which enables to attack the total product cost thus benefiting them best.

SELECTED COMPANIES FOR THE CONSULTANT SERVICE AND ON-THE-SPOT  
PLANT GUIDANCE

1. Union Carbide, Battery Plant, Mandalyong, Rizal  
Turnover P 100 mill  
Personnel 600  
Products: Dry-sell batteries:  
    D-size  
    C-size  
    AA-size  
Total capacity 500.000 batteries/day  
Plant area 10 ha  
Established 1955
  
2. Radiola-Toshiba, Philippines Inc., Mandalyong, Rizal  
Turnover P 11,8 mill  
Personnel 709  
Products: Transistor radios, Radio-Phono Combinations  
    T.T. Receivers  
    Electrical parts and components  
Established 1961, joint venture with Toshiba 1968
  
3. World Wide Paper Mills  
Personnel 142  
Turnover P 7,2 mill  
Products: Boxboard standards caliber Nos:  
    15, 16, 18, 20, 22, 24, 26, 28, 30, 32  
Plant area 3 ha  
Established 1954
  
4. Aircon Inc.  
Personnel 400  
Turnover P 37 mill  
Products: Aircond. TV-sets radiosets  
Plant area 20 ha  
Established 1963

MANAGEMENT INFORMATION TOPICS

1. Introduction: VA/VE What it is?
  - An organized study
  - A team effort of all departments
  - A dynamic program
  - A planned discipline
  - A realistic method for increasing profits
2. Why Value Analysis work?
3. Total value engineering effectiveness
  - influence on other factors than cost reduction
  - improvement factors
  - factors leading to changes
4. Relating Value Analysis on other IE techniques
5. Expected results from V.A. activities
6. The right way to initiate V.A.
  - organize effort
  - get management backing
  - select V.A. coordinators
  - set up schedules
  - develop systems and procedures
  - rank projects
  - verify the value improvement
7. Discussion  
V.A. and our company

Cabicting, E.P.  
Claridad, R.C.  
Sison, E.N.  
Sumicad ) ISSI  
Santiano )  
Santos, Ady PDS

Project: No. 7 Reduction of scrap of electrodes

Description: In the manufacturing process of batteries a fairly large number electrodes are currently scrapped due to various reasons. The waste represents worth P 360.000 annually.

Function analysis (what happens during the process)

1. Remove electrode (from crate-tray)
2. Transport tray
3. Feed stamper
4. Dispense electrode
5. Push electrode (into bobbin)
6. Transport bobbin
7. Tray bobbin
8. Transport bobbin
9. Cook bobbin etc.

The waste occurs during functions 1.-7.

Information

For further study the various types of scrap have to be studied. For that purpose the following statistics are needed:

Scrap of electrodes due to

1. Titled electrode
2. Off-centered electrode
3. Slanted bottom
4. Cracked bobbin
5. Chipped top/bottom (bobbin)
6. Pulled top (bobbin)
7. Chipped electrode
8. Broken electrode
9. Finned top/bottom (bobbin)
10. Short/tall bobbin

Because this information was not available, the further study of this project was delated.

Project No. 1 Punch Tooling

Description: As a result from increasing the capacity of extruding of cans 20%, the tool life has decreased from 200.000 cans to 70.000-100.000 cans. Saving potential if tool life can be increased to 150.000 cans P 40.000-50.000 annually.

Problem finding

The following might be reasons for short tool life:

- overheating due to increased speed
- misalignment
- callop misfeeding
- offsize collar
- inproper lubrication

The team decided after careful consideration that the main reason is overheating.

Idea finding

How to avoid overheating?

1. Use air cooling
2. Use water cooling
3. Ventilation of area
4. Use downtime for cooling
5. Change tool material
6. Change tool lubricant
7. Replace the tool tip
8. Slow down
9. Use sleeve around male
10. Use cooling tube
11. Stop preheating of callop
12. Replace male for rest
13. Cool the body of machine
14. Apply wax more often
15. Overheat the callop

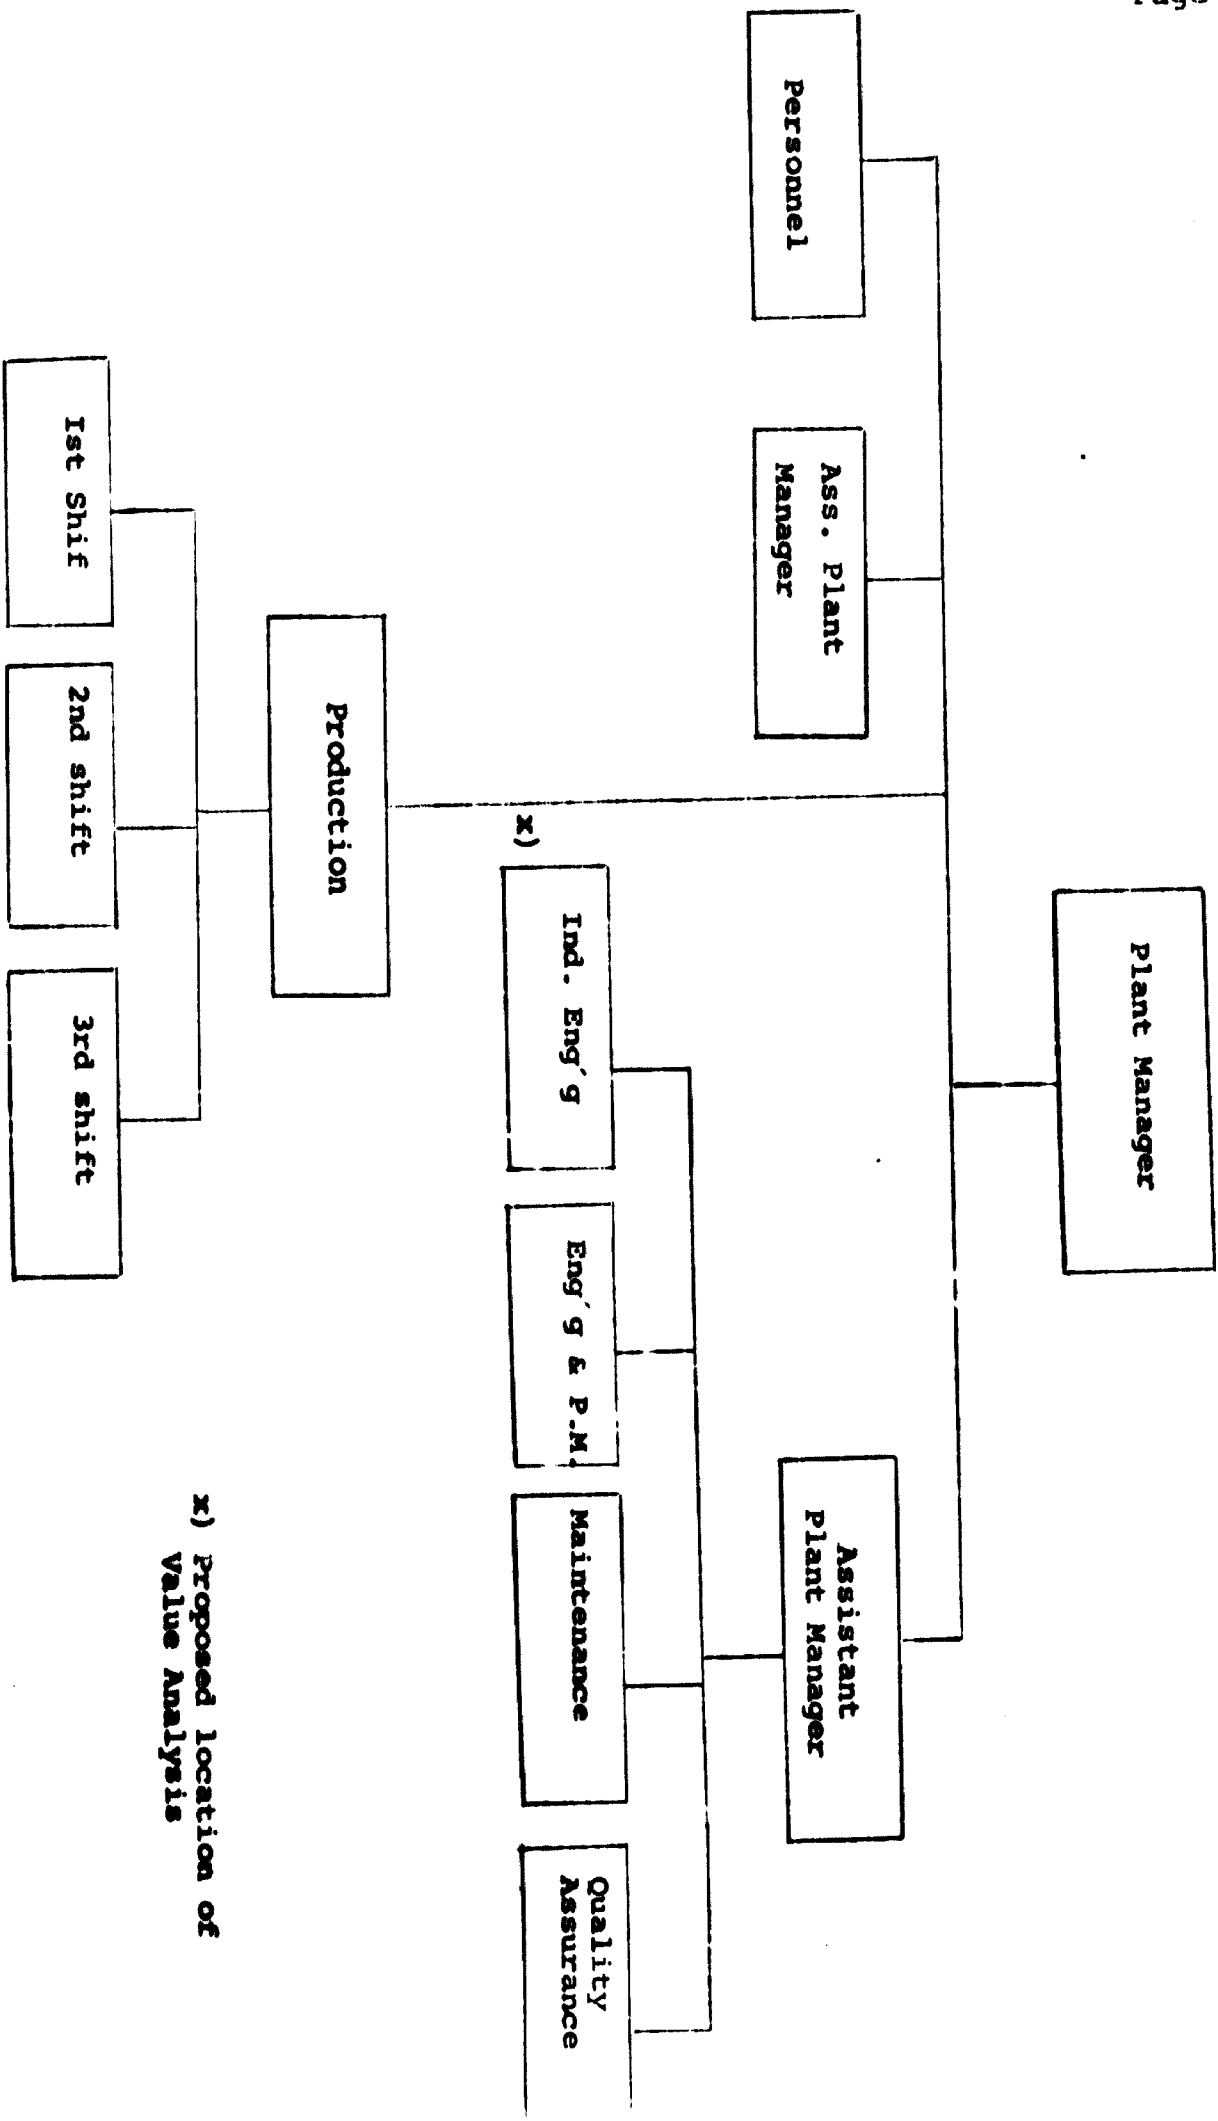

Solution finding

The following suggestions were forwarded for acceptance:

- Get aircooling device to test if pressure air cooling prolongs tool life
- Insulate preheating device to avoid excessive heat
- Chrom plating for punch male

Savings: No verified savings can be recorded before tests have been made.

IDEA No. 6 - P6.10

Good features	Bad features	How to overcome
• Cheaper	: less attractive	
• Local	: Needs Singer approval	
• Easier to mount	: Poor grip	: Save only P4.00
• Fewer parts	: Poor quality	
• No countersink in cabinet		

IDEA No. 27 - P4

Good features	Bad features	How to overcome
• Cheaper		
• Local	• Less durable	
• Easier to mount	• Grip slippery when wet	• Shape washer
• Fewer parts		
• No countersinking		
• Less bargaining		
• Equal to previous in appearance		

Expected savings

Cost of original handle assy.	- P11.83
Cost of recommended type	- <u>6.10</u>
Difference	- P 5.73
Estimated volume per year	- 4800 units
$P5.73 \times 4800 = P27,504.00$	

STEPS FOR IMPLEMENTATION

- 1) Prepare sample
- 2) Get Singer approval
- 3) Check inventory
- 4) Check outstanding orders
- 5) Prepare cabinet modification drawings
- 6) Conduct tests
- 7) Set-up quality control standards

BATTERY COMPARTMENT

Cost Breakdown

1) Battery net covers	- 2 pcs.	- Imported	-	14.82
2) Battery tubes	- 4 pcs.	- Locally purchased	-	10.54
3) Battery markers	- 2 pcs.	- Local Fab.	-	10.04
4) 3/8 x 6 screws	- 8 pcs.	- Imported	-	10.16
5) 3/8 Nuts	- 8 pcs.	- "	-	10.15
6) Terminal lugs	- 4 pcs.	- Local Fab.	-	10.15
7) Flatwashers	- 5 pcs.	- Locally purchased	-	10.07
8) 2.7 x 13 Cross-recessed screws	4 pcs.	- Imp.	-	<u>10.14</u>

**P9.51**

Functions:

- A 1) Gives esteem
- A 2) Provides access
- B 3) Holds batteries
- A 4) Aligns batteries
- A 5) Connects batteries
- A 6) Anchors cabinet
- A 7) Gives information
- A 8) Gives weight
- A 9) Resists corrosion
- A 10) Takes space
- A 11) Balances weight
- A 12) Easy removal

NET COVER ASSY.

- A 1) Provides connection
- B 2) Provides access
- A 3) Gives esteem
- A 4) Locks batteries
- A 5) Requires alignment wood
- A 6) Anchors cabinet
- A 7) Provides insulation
- A 8) Provides individual access
- A 9) Extends space
- A 10) Increases servicing

Basic Function: Provides Access

- 1) Swinging door - P1.45
- 2) Screw caps
- 3) Window type (sliding) - P1.50
- 4) Hood cover with screws - 10.40 or 10.50
- 5) Drawer type
- 6) Change access - P0.70
- 7) Zipper type - P1.20
- 8) Sliding door - P1.45
- 9) Curtain type - P1.00
- 10) Push type

Basic Function: Provides Access (cont'd)

- 11) Lock type door
- 12) String type
- 13) Hooks
- 14) Automatic lock
- 15) Button type
- 16) Snap-On type
- 17) Adhesive type
- 18) Use adhesive tape
- 19) Suction type
- 20) Flip cover plus tape
- 21) Use glue with cover - P0.25
- 22) Strap
- 23) Pressure type - metal
- 24) Pressure type - plastic cap
- 25) Rubber type
- 26) Pin Ball machine type
- 27) Individual circular swinger
- 28) Pivot clamp
- 29) Magnetic type
- 30) Lazy tong hinge type
- 31) Duffle bag type - P0.15

DAFFLE BAG

Good features	Bad features	How to overcome
• Cheap	• Difficult to replace	• Make it colorful
• Easy to manufacture	• Not attractive	
• Easy to secure	• Needs approval of client	• Reduce sales value
• Less parts	• Reduces sales value	
	• Requires extra electrical connections	
	• Hard to use	
	• Not durable	

WOODEN COVER WITH DIFFERENT FASTENING METALS - P0.50

Good features	Bad features	How to overcome
• Cheap	• Requires approval	• Negotiations
• Durable	• Less attractive	• Put deco plate
• Easier servicing	• Needs cabinet redesign	
• Secure		
• Local	• Looks cheap	
• Saves space	• Requires tool	• Not frequent anyway

EXPECTED SAVINGS

Cost of original type	-	P9.51
Cost of proposed type	-	<u>P0.50</u>
Difference	-	P9.01

$$P9.01 \times 4800 = P43,248.00$$

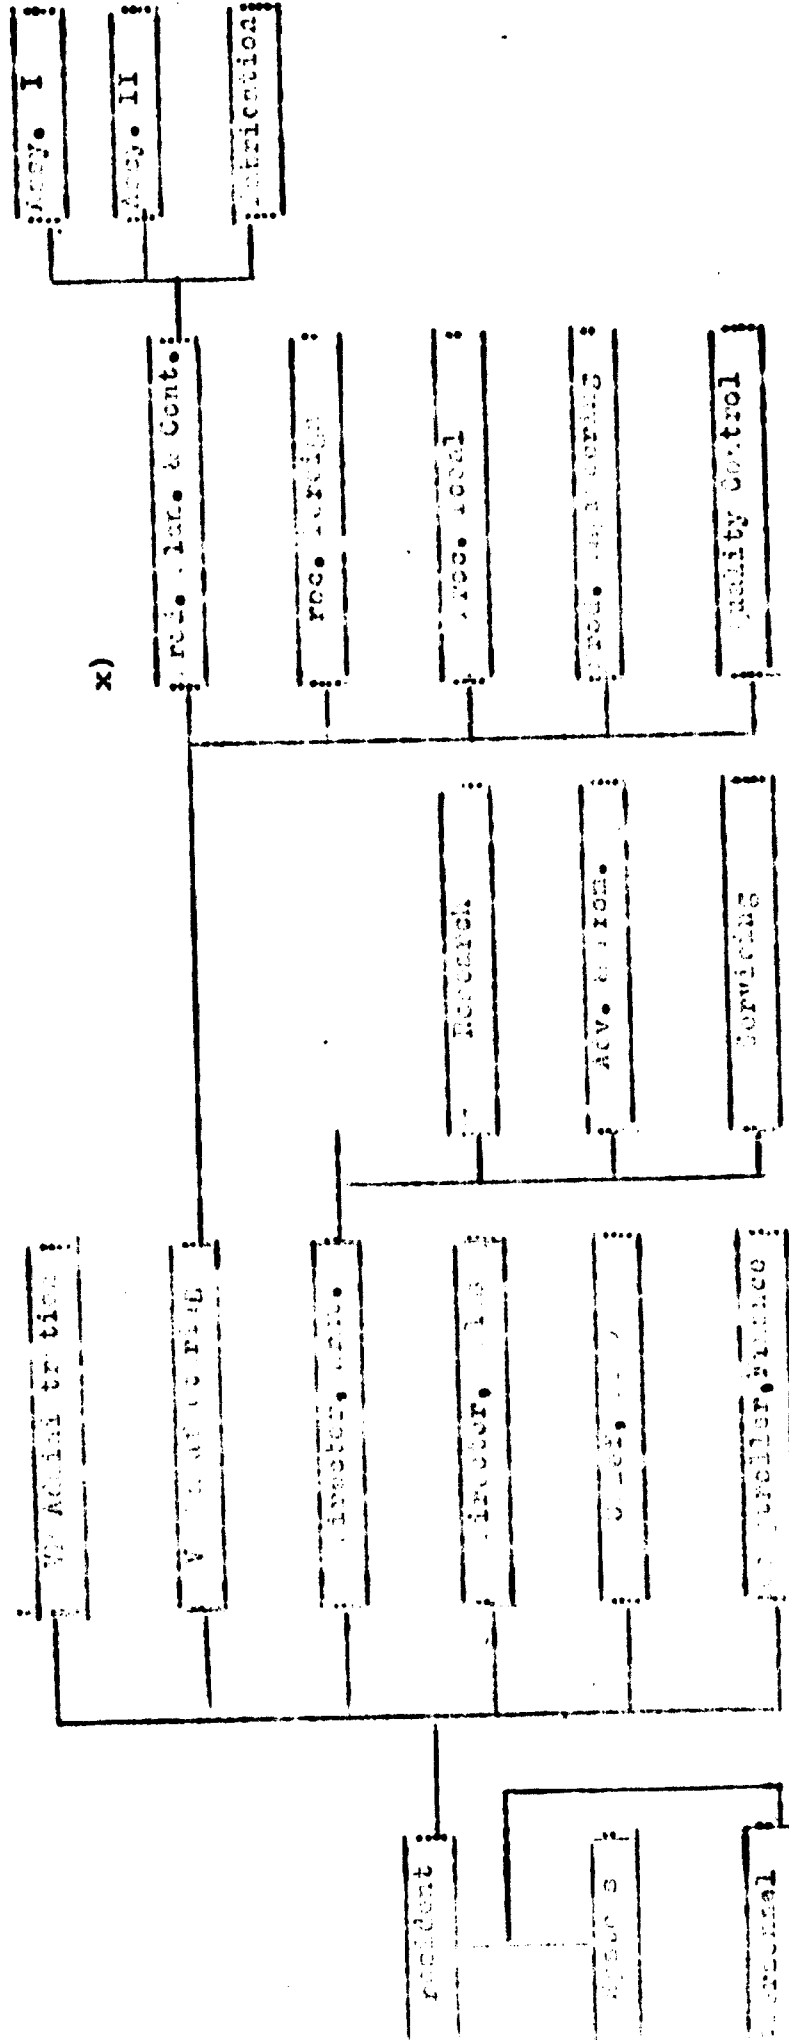

TOTAL SAVINGS FOR THE SS-410 MODEL - P27,504 + P43,248 = P70,752

EE:fgm

ORGANIZATION SCHEME OF RADIOLA-TOSHIBA PHILIPPINES INC.

x) Value Analyst

WPMI - BALER

PROBLEM: How to shorten shutdown time.

<u>IDEAS (Speculative)</u>	<u>SAVINGS</u>
1. Do cleaning in place.	7 x 15 minutes.
2. Replace with 4 spares.	3 x 15 minutes.
3. Use additional men to install long felt.	30 minutes.
4. Use pattern or guide to remove and install.	?
5. Use special felts to reduce frequency of shutdown as a result of less dogging.	?
6. Use two cranes.	30 minutes.
7. Use 4 cleaning tanks and add boom type crane.	90 minutes.

EVALUATION OF POSSIBLE SAVINGS

IDEA #1

Time Saved = 7 x 15 = 105 minutes  
 Savings = 1.75 x 48 times x P500.00 = P42,000.00/year

Method:

- a) Use high pressure water for box.
- b) Introduce acid solution in the box.
- c) Introduce steam.
- d) Clean, the usual manner manually.
- e) Drain and flush.

IDEA #2

Time Saved = 3 x 15 = 45 minutes  
 Savings = 0.75 x 48 x P500.00 = P18,000.00/year  
 Cost of 4 Cylinders = P88,000.00  
 Expected Life = 5 years  
 Amortization = P17,600.00/year

VFB/\*cdm

Idea #3

Savings = P12,000/year - (gross)

Cost of add'l. labor (for shutdown only) = P600/year/man

Net Savings = P10,200.00

Idea #4

Requires study to design facility.  
Long term project.

Idea #5

Requires consultation with vendor.  
Long term project.

Projected Savings = 1/3 of shutdown frequency =  
P40,000 potential savings.

Idea #6

Gross Savings = P12,000/year

Cost of equipment = P2,000 (rough estimate).

Net Savings = P10,000/year (on the first year).

Idea #7

Gross Savings = P36,000/year.

Additional Costs:

a)	Boom type crane (estimate)	=	P4,000.00
b)	Additional cleaning boxes (2)		1,000.00
c)	Additional labor (6 persons)		3,600.000
			<u>P8,600.00</u>

First Year Savings = P27,400.00

SUMMARY OF SAVINGS:

The following ideas are feasible:

SHORT TERM

(1)	Idea #3	-	P10,200.00
(2)	Idea #6	-	10,000.00
(3)	Idea #7	-	27,400.00
	Combination of #1 and #3	=	P37,600.00
	Required Investment	=	P 5,000.00

LONG TERM

(1)	Idea #4	-	?
(2)	Idea #5	-	P40,000.00 (potential)

Assumptions: a) 30% longer life (strength)  
b) 50% higher cost

Present felt costs = P72,000/year

Projected cost of improved felts =  $72,000 \left( \frac{1.5}{1.3} \right) = P84,000$

Required add'l. investment = P12,000/year

Potential net savings = P28,000/year

Conclusion:

Consult vendor as soon as possible for revision of felt design to meet assumptions.

SUMMARY

1. Prepare plans to implement short term projects  
savings - P37,600.00.
2. If nylon felts can be designed, make trial run.  
Potential - P28,000.00.

PROJECTED TOTAL SAVINGS OF COMBINATION = P65,600.00.

Silvestre David	Assistant Prod.Mgr
Leoncid Punzalan	Supervisor
Narciso Menodza	-"-
Ady Santos	PDC
Antonio M. Sison	"

**Information****Airmaster ACH-10-E5/Fedder ACB-12**

	<b>Airmaster Cost P</b>	<b>Fedder Cost P</b>
Motor with fans	112,50	113,00
Compressor	480,-	480,-
Condensor	77,-	67,-
Evaporator	55,-	55,33
Condensor shroud	7,-	3,50
Evaporator cover	4,-	6,-
Bottom pan	16,50	15,-
Volute Assy	5,-	5,-
Cabinet Assy	27,50	25,-
Decorative front	60,-	61,-

**Project: Condensor ring**  
P 1,36/each  
10 000 pcs/ann.  
P 13 600/ann.

**Material 1.29**

**Labour +**

**OH**      0.07  
            1.36

Function:

- S Protects motor
- B Guides Airflow
- S Fastens to shroud
- S Resists corrosion
- (S Gives strength)
- S Resists heat

Speculation: Guides Airflow

- 0.85 1 Use steel + paint
- 2 Use plastic
- 3 Use glass
- 4 Use wood
- 5 Use asbestos
- 6 Use molded fibre glass
- + 7 Draw one piece
- 8 Increase depth of shroud
- 1,00 9 Use thinner gage al
- ? 10 Use tin plate
- + 11 Faster with screws
- + 12 Draw deeper less al
- + 13 Spotweld steel ring
- 14 Use boxboard ring
- 15 Use gun metal
- 16 Use zinc
- 1,23 17 Use GI (galvanized iron)

EVALUATION

1. Steel ring, spot welded + painted  
in flat position  
- painted round

**PLANNING**

**Idea:** Steel ring, 3 grooves, thinner gage (30),  
same fastening, painted  
Savings P 5500/annually

**Steps to implement:**

- Test grooving
- Get approval of mngt
- Sequence of operation
- Put Alfredo Severino to the job
- Precise saving calculations

**Project:** Condensor

**Idea:** Use same condensor in airmaster as in feeders

**Total saving P 30 000/annually**

**Steps to implement:**

- Test condensor
- Get approval

**Project:** Compressor Suction Line Tube

**Idea:** Use same coil as in feeders

**Total saving P 5700/ann.**

**Steps to implement:**

- Test tube
- Get approval
- Release change notice

**Total all change proposals:**

**P 41,200/annually**

SEMINAR OUTLINE

I. INTRODUCTION TO VALUE ANALYSIS

- A. Definition of Value Analysis
- B. History and Development of Value Analysis
- C. Reasons for Unnecessary Cost
- D. The Meaning of "Value"

II. TECHNIQUES OF VALUE ANALYSIS

- A. Problem Solving Techniques
- B. The V.A. Method or Job Plan
- C. The Functional Approach
- D. Team Project Work Formulation

III. EVALUATION OF FUNCTION, COST AND WORTH

- A. Cost Analysis
- B. Function/Cost Analysis Techniques
- C. Creative Ability
- D. The Part Approach
- E. Using the Right Costs
- F. Project Work

IV. MEASURING THE EFFECTIVENESS OF THE VALUE ANALYSIS PROGRAM

- A. Organizing & Controlling V.A.
- B. Selecting Projects
- C. Completion of Projects
- D. Presentation of Conclusions
- E. Review of V.A. Proposals and the Formulation of Alternative Proposals

## V.A. SEMINAR MATERIAL

**Front Cabinet Assembly of Room Air-Conditioner**

Covers air conditioning units and decorates the front of the room air-conditioner.

Present: The decorative front cover is made of vinyl film overlaid on aluminum plate. "Airmaster" sign made of Ni Plated Bronze.

Proposal (a): Decorative front cover made of plastic with embossed "Airmaster" sign.

Proposal (b): Decorative front cover made of plywood with "Airmaster" sign made of plastic.

Product Name: Radiola "Playmate" Radio-Phonograph Set

Product Purpose: To provide entertainment & information

Product Description: (blank)

To change Imported Plastic Turntable Base to Locally Injected Plastic Turntable Base.

PROPOSED COST

PROPOSED SAVINGS

Materials	\$ 1.50
Labor	1.00
Overhead	7.50

\$ 15.00/pc (Imported)	Total	\$ 10.00/pc (Locally Injected)
------------------------	-------	--------------------------------

Unit Saving	\$ 5.00
Incidental Saving	.66

Annually per year	6,000 sets
-------------------	------------

\* In using a locally injected base, it was found that it is possible to eliminate some nuts, mtg. brackets, washers, & screws thus increasing the unit saving from \$ 5.00 to \$ 5.66.

ADDITIONAL SAVING	\$ 33,900.00
-------------------	--------------

Cost of change	No change in design
----------------	---------------------

Savings in first year	No change in design
-----------------------	---------------------

SW 8623 - BRUSH FUNNEL ASSY. for SAKER III & IV

SAC Machine Shop P 72.- 1000 pcs P 72,000

- ① for clamping bottle during cleaning operation.
- ② Guides brush
- ③ Guide top end of bottle

Operational Information

- \* The brush funnel assembly is a six part made of non-ferrous metal which clamps the bottle during the brushing operation

\* Parts

- ① Brushing
- ② Funnel
- ③ Funnel cap
- ④ Brass stem guide
- ⑤ Funnel Nut
- ⑥ Spring

Investigated by: **Team No. 526** Date: **November 12-13, 1970**

Name of Project: FIVE GALLON PAIL

Objectives: TO MARKET OIL IN FIVE GALLON LOTS

Proposed by: (Name and address of the proposer)

BEFORE

AFTER

The proposal is a closed type pail, i.e., to construct the top similar to the bottom and to use smaller handle (similar to the handle in Kenyan can) to be placed at top. Filling shall be through the spout hole. Attachment of spout and spout hole crimping shall be after filling.
