Santiago, Chile

1/ The views and opinions expressed in this paper are those of the author and do not necessarily reflect the views of the Secretariat of UNIDO. This document has been reproduced without formal editing.

We regret that some of the pages in the microfiche copy of this report may not be up to the proper legibility standards, even though the best possible copy was used for preparing the master fiche.

1.0. INTRODUCTION

The great variety of types of economic activity in forestry has led to its exclusion from official or sectoral statistical data. It was only investigated when national industrial census was carried out. The lack of a sector - forestry model was the main problem. In 1971 with the national economy organized into industrial sectors and the development of a national forestry statistical system, a systematic and scientific study of this activity began.

There exist in this field a great number of small and medium size industries (2.000 approximately) of relatively high national importance. The technological level and the capital investment per production unit is relatively small. The work is carried out with a large installed capacity unutilized, even in times of high production levels. Production fluctuates, there being a tendency to increase in the long term.

Working conditions are dangerous with poor hygiene conditions. The work requires great physical effort, it demands highly skilled and experienced workers. The levels of personal income are lowest in the forestry manufacturing industries.

The above pertains to the furniture industry. Before going into more details of the status of this industry, Table 1 gives some idea of the national possibilities as far as forest products are concerned. These figures are valid for 1971 and relate to the main forestry economic activities.

- TABLE 1.- Physical sector: production per item of forestry economic activity (1971)

Items	Units	Production 1971
- PULP AND PAPER		
- Mechanical pulp	Metric tons	112.530
- Chemical pulp	Metric tons	284.960
- News print	Metric tons	101.660
- Paper and card board for printing, stationery and packaging	Metric tons	226.920
- Wall paper	Rolls	906.244
- PANELS		
- Veneers	m ²	1.570.000
- Fibre board	Metric tons	19.000
- Particle board	Metric tons	15.000
- Plywood	m ³	10.450
- Wood for matches	Board feet	4.930.000
- Sawnwood	Board feet	700.000.000
- Planed, moulded and grooved and tongued wood	Board feet	400.000.000
- Prefabricated houses	m ²	-

2.0. CLIMATE

Chile is a long strip of land running from north to south between 17° and 30° latitude. Its altitude varies from sea level to 7.000 m. in the mountains. Hence all types of climatic conditions can be found. Temperatures vary from 20°C all year round in Arica to - 8°C in winter in Puerto Arenas. Mean relative humidity varies from 30 - 80 % depending on the region. The average moisture content fluctuates between 8 % (Tal-Tal) to 18% (south region). For heated spaces 10 - 14% average moisture

content is accepted, regarding the type of sawing).

This means that depending on the location of the industry

the sawing may be:

3.6. TIMBER AND CARBONIZATION OF WOOD IN INDUSTRY.

Most timbers used in industry are native timbers. Some of them are: Linque (*Podocarpus* - *lliapa*); Brull (*Pithecellobium* - *precora*); Laurel (*Laurelia sempervirens*); Cidre (*Psilophyllum* - *desbreyi*); Alerce (*Fitzroya* - *rodriguezii*); Araucaria (*Araucaria* - *imbricata*) and Pino Blanque (*Pinus* - *radiata*) which is a lower quality raw material coming from plantations.

The country does not import timber.

As far as drying is concerned, present capacity is:

Drying capacity.

Nº of plants	Province	Charge capacity (board - feet)	Dry capacity board-feet/day	Av. capacity board-feet/day
3	Valparaíso	15.000	1.408.3	352.700
25	Santiago	937.200	60.733.3	17.343.320
1	O'Higgins	10.000	500.0	125.000
1	Zalda	3.000	1.000.0	
2	Maule	191.000	15.952.3	20.238.000
6	Concepción	605.000	120.000.0	47.500.000
1	Aracena	30.000	0.571.4	2.142.000
2	Maule	12.000	1.300.0	340.000
1	Bío-Bío	10.000	24.333.0	6.083.250
2	Cautín	10.000	3.053.0	913.250
3	Valdivia	15.000	3.040.0	960.000
1	Oscorno	20.000	800.0	200.000
3	Llanquihue	21.000	810.0	210.000
TOTAL		2.795.200	122.631.3	105.658.450

It is estimated that there is a

Other materials examples are wool fibres, acrylic fibres, hide and aboriginal. Of the synthetic materials: synthetic leather and plastic foam have been introduced. The employment of expanded polyethylene on the frames of seating furniture is still in the experimental stage.

3.3. LABOUR

According to 1967 census, this industry employs 12,564 workers, which is approximately 3 % of the total labour force. In the forestry sector 60 % of these are in Santiago.

31.03 % of the workers are managers or their relatives,
6.28 % are administrative employees and
71.00 % are production workers.

In far as training is concerned, it is estimated that 70 % of the workers have not received systematic training, they have learned their skills directly in the shop floor. The usual system is: apprentice - assistant - skilled worker, starting at primary school level. This is a long period of time, ten years or more.

For the engineers and technicians, their professional training is essentially that of a university or technical school but they do not have a furniture manufacturing background as there is no such training.

In the country there is an organisation INACAP (National Training Institute) which has a furniture course which may be completed in one year.

5.0. FURNITURE FACTORIES

(Analysis based on industrial census 1967)

There are 1,819 furniture factories in Chile, 1,359 of which are located in the Santiago metropolitan area. Of these 90.34 % are small industries.

Industries by Number of Workers:

	Nº OF INDUSTRIES	%
1 - 4 workers	1.359	74,7
5 - 9 workers	275	15,1
10-19 workers	116	6,3
20-49 workers	69	3,7
	<hr/>	
	1.819	

5.1. LOCATION.- These industries are concentrated mainly in Santiago with lesser concentrations in Valparaiso and Concepcion.

Distribution by Province:

Province	Nº of Industries	Workers
Tarapaca	45	275
Antofagasta	54	339
Atacama	18	75
Coquimbo	62	231
Aconcagua	32	91
Valparaiso	175	962
Santiago	879	7.570
O'Higgins	36	98
Colchagua	50	173
Curicó	24	70
Talca	31	75
Maula	26	56
Linares	35	82
Ñuble	48	196
Concepción	91	572
Arauco	13	30
Bío-Bío	33	89

Province	Nº of Industries	Workers
Malleco	46	379
Cautín	59	296
Valdivia	40	282
Osorno	33	197
Llanquihue	34	193
Chiloé	20	52
Aysén	11	26
Magallanes	36	137
	1.931	12.564

5.2. MACHINES.- The distribution of the most common wood machines is as follows.

Spindle moulder	591 machines
Circular saw	1.025 machines
Band saw	570 machines
Sander	512 machines
Planer	357 machines
Double planer	185 machines

There are no available data relating to more specialized machines; such as finger jointers, moulders, presses, jig saws, sash stickers, etc.

The following table classifies machines by types and years of use.

Type	% of machines			
	1 - 5	6 - 10	11 - 20	more than 20
Spindle moulder	33 %	4 %	36 %	10 %
Circular saws	15 %	8 %	49 %	8 %
Band saws	7 %	7 %	47 %	27 %
Sanders	19 %	11 %	30 %	28 %
Planer	13 %	9 %	39 %	26 %
Double Planer	21 %	5 %	47 %	21 %

From the table it can be seen that the machinery is old, though in the last years there has been a tendency to renew the machines (see column 3, 1961).

It is estimated
in nearly all
cases that the machinery is

In general the techniques in use are traditional with very little mechanisation.

See table 11.

5.0. MARKETING

Most enterprises sell their products direct to the customers through their own sales outlets or direct contacts with other enterprises or organisations.

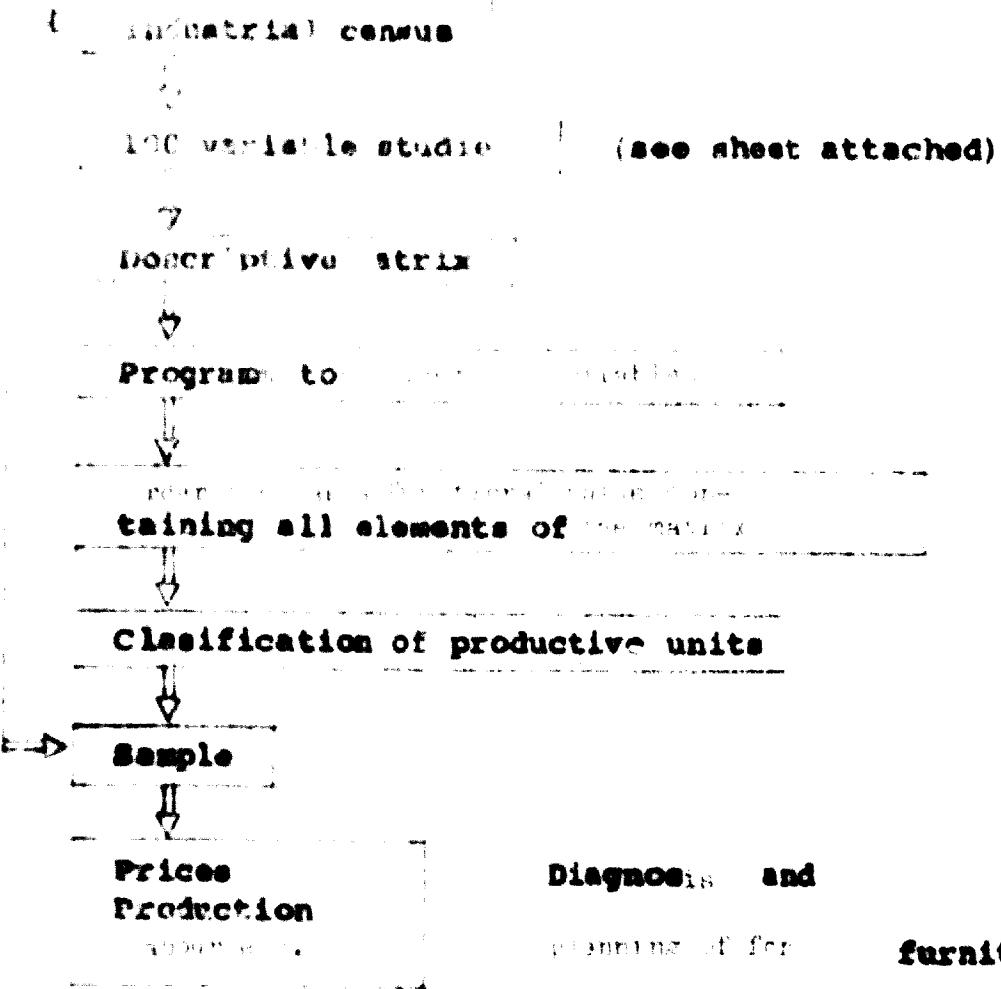

Exports are very scarce.

7.0. FUTURE DEVELOPMENT in FURNITURE INDUSTRY

The future development of this activity is very closely connected with the establishment of a nationalized industrial complex in Santiago, Valparaiso or Concepcion and the gathering of sufficient data for this manufacture. At the last available data obtained in 1967 manufacturing industry census.

The Forestry Institute through its statistical section is currently endeavouring to develop a systematic analysis model for the furniture manufacture. This will take into account the availability of different materials, labour and capital resources.

This systematic analysis will have to be completed in the near future.

From the productive units of the furniture industry:

- 1.- Home furniture
- 2.- Office furniture
- 3.- Kitchen furniture
- 4.- Children's furniture
- 5.- Industrial furniture
- 6.- Furniture for machines and equipment
- 7.- Special furniture
