INDUSTRIAL DEVELOPMENT ABSTRACTS

Introduction

Industrial Development Abstracts (IDA) has two basic purposes. The first is to provide, especially for the developing countries, a specialized but easy-to-use guide to documentation, much of it unpublished, concerning the industrialization of the developing countries. (The substantive range is from industrialization in its broadest sense to the most technical aspects.) The second objective is to fill the gap in the indexes published by the organizations of the UN family, and thus promote efforts to attain a more complete documentation of economic development.

It is recognized that it is becoming more difficult for industrial engineers, managers and research personnel to keep up with the tremendous flow of new literature on their subjects. This applies especially to the unpublished material. *IDA*, with its computer-stored information available for machine retrieval and for the production of specialized bibliographies, hopes to help keep this flow under control.

IDA indexes and abstracts the following types of UNIDO documents. (1) Printed publications of UNIDO, i.e. major studies and reports, recurrent publications and series, and selected articles from *Industrial Research and Development News (IRDN)* and *Industrialization and Productivity Bulletin*; (2) documents submitted to the Industrial Development Board; (3) documents of expert working groups, workshops and seminars; (4) internal studies and reports; (5) information series; (6) technical assistance reports, including feasibility studies, project reports etc., and (7) answers to questions handled by UNIDO's Industrial Inquiry Service. When capacity becomes available, *IDA* will include selected unpublished material produced outside UNIDO and of interest to those concerned with the industrialization of developing countries.

IDA consists of two parts: (1) a subject index: and (2) a bibliographical list which gives the abstracts in the order in which they were processed for the computer. The terms used in the abstracts, which make up the subject index, are taken from the *UNIDO List of Descriptors*. Worksheets are prepared manually and are then converted to machine-readable form. This input is processed by computer to permit printing-out of the abstracts and machine-retrieval of information.

The information processing system used is referred to as "INDIS" (Industrial Information System). It is patterned largely after the ISIS system developed by the International Labour Office (ILO), and is thus compatible with many of the indexing systems adopted by organizations within the UN family and outside. This compatibility will permit rapid exchange of

information and is in line with the goals indicated in Chapter Six of the *Study of the Capacity of the United Nations Development System, Vol. II*¹.

It is intended to put each indexed document on microfiche and to make copies of these available for a nominal fee.

Free copies of the abstracts are available for limited circulation. Requests for consideration in this connexion should be addressed to:

RESUMES D'ETUDES SUR LE DEVELOPPEMENT INDUSTRIEL

Introduction

Les *Resumés d'études sur le développement industriel (Industrial Development Abstracts – IDA)* ont essentiellement deux raisons d'être. La première est de fournir, à l'intention plus particulièrement des pays en voie de développement, un guide spécialisé mais pratique de la documentation, en grande partie non publiée, concernant l'industrialisation des pays en voie de développement. (Les documents résumés traitent de tous les aspects de l'industrialisation, des plus généraux aux plus techniques.) La seconde est de combler les lacunes des index publiés par les organismes des Nations Unies et de participer ainsi aux efforts déployés pour établir une documentation plus complète dans le domaine du développement économique.

Il est indéniable que les ingénieurs, les cadres de gestion et le personnel de recherche de l'industrie éprouvent de plus en plus de difficultés à se tenir au courant de l'énorme masse de documentation nouvelle sur les questions qui les intéressent. C'est là une constatation qui s'impose davantage encore dans le cas des documents non publiés. Le système des résumés d'études sur le développement industriel, qui permet de récupérer des informations enregistrées sur ordinateur et de les utiliser notamment pour établir des bibliographies spécialisées, devrait contribuer à rendre plus aisément utilisable cette masse de documents et de publications.

On trouvera indexés et résumés dans les IDA les types suivants de documents de l'ONUDI: 1) les publications de l'ONUDI qui comprennent les études et les rapports essentiels, les publications périodiques et les publications en série ainsi que certains articles du *Bulletin de la recherche et du développement industriels (BRDI)* et du *Bulletin intitulé Industrialisation et Productivité*; 2) les documents soumis au Conseil du développement industriel; 3) les documents préparés pour des réunions d'experts, des journées d'études ou des cycles d'études; 4) les études et rapports de caractère interne; 5) les séries de documents d'information; 6) les rapports concernant l'assistance technique: études de faisabilité, rapports sur les projets, etc.; et 7) les réponses données par le Service de renseignements industriels de l'ONUDI aux questions qui lui sont posées. Si l'on en a les moyens, on indexera et résumera aussi dans les IDA certains documents non publiés émanant d'autres organismes que l'ONUDI et présentant de l'intérêt pour ceux qui s'occupent de l'industrialisation des pays en voie de développement.

Le système des IDA comprend deux parties: 1) un index par sujet; 2) une liste bibliographique des résumés dans l'ordre où ils ont été préparés pour l'ordinateur. Les termes utilisés dans les résumés, et à partir desquels est établi l'index par sujet, sont empruntés à la *Liste des descripteurs de l'ONUDI*. Les

fiches sont d'abord établies à la main, puis traduites en langage machine. L'ordinateur traite ces données de façon à permettre l'impression des résumés et la récupération des informations.

Le système de traitement de l'information utilisé a reçu le nom d'Industrial Information System (Système d'information industrielle), abrégé en INDIS. Il a été conçu en grande partie d'après le système ISIS mis au point par le Bureau international du Travail (BIT), ce qui le rend compatible avec beaucoup de systèmes d'indexation adoptés par les organismes des Nations Unies et d'autres organismes. Cette compatibilité permettra l'échange rapide des informations et elle est conforme aux objectifs définis au chapitre VI de *l'Etude de la capacité du système des Nations Unies pour le développement*, vol. II¹.

Chacun des documents indexés doit être microfilmé et des copies de ces microfiches pourront être fournies contre versement d'une redevance modique.

Des copies des résumés peuvent être communiquées gratuitement en nombre limité. Les demandes les concernant doivent être envoyées à l'adresse suivante:

РЕФЕРАТИВНЫЙ ЖУРНАЛ ПО ПРОМЫШЛЕННОМУ РАЗВИТИЮ

Введение

Реферативный журнал по промышленному развитию (РЖПР) имеет две основные цели. Во-первых, он должен служить, в особенности для развивающихся стран, специализированным, но легко доступным ключом к часто неопубликованной документации, касающейся индустриализации развивающихся стран. (По своему содержанию он охватывает широкий круг вопросов от индустриализации в ее самом широком смысле до наиболее конкретных технических аспектов). Во-вторых, он должен служить для заполнения пробелов в различных справочных указателях, публикуемых организациями системы ООН, и тем самым содействовать достижению более полной документации по вопросам экономического развития.

Общеизвестно, что производственникам, руководящему персоналу и научным работникам становится все труднее и труднее справляться с громадным притоком новой литературы по интересующим их вопросам. Это прежде всего касается неопубликованных материалов. Нужно надеяться, что *реферативный журнал*, благодаря хранящейся в счетно-решающих устройствах информации, обеспечивающей возможность ее автоматических поисков и опубликования в виде специализированных библиографий, поможет справляться с таким потоком информации.

Реферативный журнал индексирует и реферировать следующие виды документации ЮНИДО: 1) печатные публикации ЮНИДО, т.е. основные исследования и доклады, периодические публикации и серии и отдельные статьи из журналов "*Новости промышленных исследований и развития*" и "*Бюллетень индустриализации и производительности труда*"; 2) документы, представляемые Совету по промышленному развитию; 3) документы рабочих групп экспертов, курсов и семинаров; 4) внутриорганизационные исследования и доклады; 5) информационные серии; 6) доклады по вопросам технической помощи, включая исследования экономической целесообразности, доклады по проектам и т.д. и 7) ответы на вопросы, задаваемые Службой информирования ЮНИДО по запросам развивающихся стран. По мере высвобождения места *реферативный журнал* будет включать отдельные неопубликованные материалы,

разработанные вне ЮНИДО и представляющие интерес для тех, кто занимается вопросами индустриализации развивающихся стран.

Реферативный журнал состоит из двух частей: 1) предметный указатель; и 2) библиографический указатель, в котором приводятся аннотации документов в том порядке, в котором они были обработаны для счетно-решающего устройства. Ключевые выражения, используемые в аннотациях и служащие для составления предметного указателя, позаимствованы из *Перечня дескрипторов ЮНИДО*. Рабочие карточки подготавливаются вручную и затем преобразуются в перфокарты, пригодные для чтения счетно-решающим устройством. Вводные данные обрабатываются счетно-решающим устройством, что позволяет осуществлять публикацию аннотаций и автоматические поиски информации.

Применяемая система обработки информации получила название "ИНДИС" (система промышленной информации). Она создана главным образом по типу системы ИСИС, разработанной Международным бюро труда (МБТ), и тем самым она согласована со многими системами индексирования, принятыми различными организациями как в рамках системы ООН, так и вне ее. Эта согласованность позволит осуществлять быстрый обмен информацией и находится в соответствии с целями, указанными в главе шесть Исследования способности системы развития Организации Объединенных Наций, том II¹.

Предполагается переснимать все индексированные документы на микрокарты, копии которых будут предоставляться по минимальной цене.

Небольшое число аннотаций может рассылаться бесплатно. В этой связи заявки на их получение следует направлять по адресу:

EXTRACTOS DE DESARROLLO INDUSTRIAL

Introducción

Industrial Development Abstracts (IDA) tiene dos finalidades principales. La primera es proporcionar, principalmente a los países en desarrollo, una guía especializada fácilmente manejable de documentación —en su mayor parte inédita— sobre la industrialización de los países en desarrollo. (La gama de materias va desde la industrialización en el sentido más amplio hasta sus aspectos más técnicos.) La segunda finalidad es colmar las lagunas que existen entre los índices que publican las organizaciones del sistema de las Naciones Unidas y promover así actividades que permitan disponer de una documentación más completa sobre el desarrollo económico.

De sobra es conocida la creciente dificultad que supone para los ingenieros, los directivos y el personal de investigación mantenerse al día de la formidable corriente de nuevas publicaciones relativas a sus respectivas especialidades. Esto es sobre todo aplicable al material inédito. *IDA* espera poder ayudar a encauzar esta corriente mediante el almacenamiento en computadora de información —mecánicamente recuperable— para la preparación de bibliografías especializadas.

IDA clasifica y resume los siguientes tipos de documentos de la ONUDI. 1) Publicaciones impresas, es decir, estudios e informes principales, colecciones y publicaciones periódicas y artículos seleccionados de *Noticias sobre Investigación y Desarrollo Industriales (NIDI)* y del *Boletín de Industrialización y Productividad*; 2) documentos presentados a la Junta de Desarrollo Industrial; 3) documentos de grupo de expertos, reuniones de trabajo y seminarios; 4) informes y estudios internos; 5) series informativas; 6) informes de asistencia técnica, incluidos los estudios de viabilidad, los informes sobre proyectos, etc., y 7) respuestas a consultas tramitadas por el Servicio de Consultas Industriales de la ONUDI. Cuando se disponga de mayor capacidad, *IDA* incluirá material inédito seleccionado producido fuera de la ONUDI que sea de interés para quienes se ocupen de la industrialización de los países en desarrollo.

IDA consta de dos partes: 1) un índice de temas y 2) una lista bibliográfica que presenta los extractos en el orden en que han sido preparados para la computadora. Los términos utilizados en los extractos, que constituyen el índice de materias, están tomados de la *UNIDO List of Descriptors*. Las hojas de trabajo se preparan manualmente y se les da luego la forma adecuada para que la computadora pueda leerlas. Estos datos de entrada se elaboran por computadora para permitir la impresión de los extractos y la recuperación mecánica de la información.

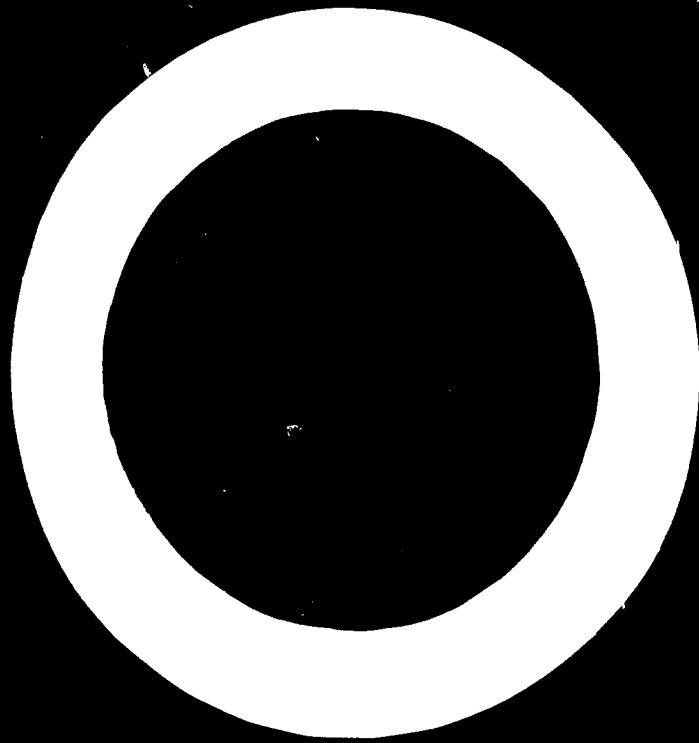

Este sistema de elaboración de la información se denomina "INDIS" (Sistema de Información Industrial). En gran parte sigue la pauta del sistema ISIS desarrollado por la Oficina Internacional del Trabajo (OIT), razón por la cual es compatible con muchos de los sistemas de índices adoptados tanto por las organizaciones del sistema de las Naciones Unidas como por otras organizaciones externas. Esta compatibilidad permite un rápido intercambio de información y está en armonía con los objetivos señalados en el capítulo 6 del *Estudio sobre la Capacidad del Sistema de las Naciones Unidas para el Desarrollo*, Vol. II¹.

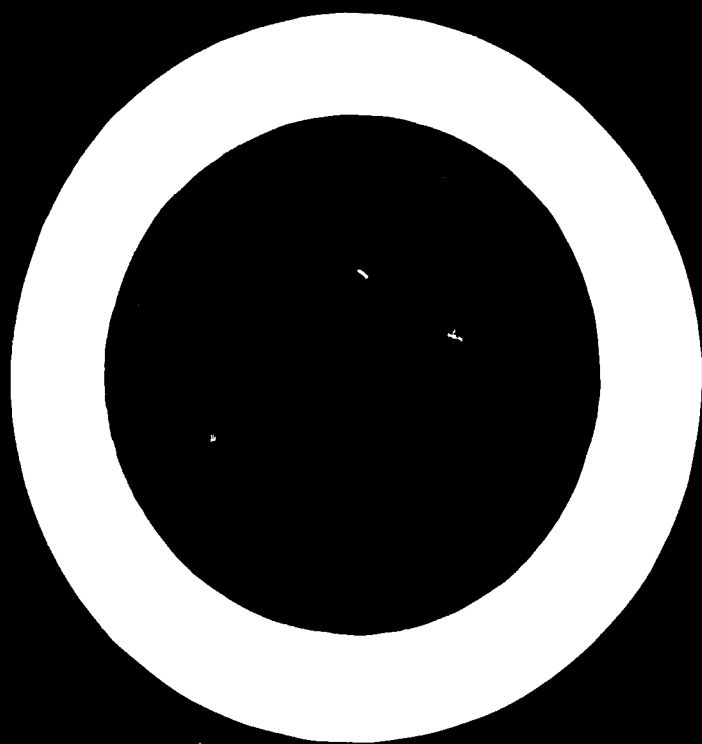

Se tiene en proyecto reproducir en microficha cada documento incluido en el índice y sacar copias de ella para su venta a un precio simbólico.

Se dispone de ejemplares gratuitos de los extractos para su distribución limitada. A este respecto las solicitudes deberán enviarse a:
