### Introduction.

The Eegional Training Workshop on the Application of the successfor Evaluation of Sational Industrial Investment In the was being Cairo from 2 to 15 lebruary 15 h. It was opensored with Sinamord Jointly by UNIDO and the Industrial Development Centre for Arac States (IDCAS). The proparations for the workshop were started in Larch 1975 by the then Industrial Programming Section of the Industrial Policies and Programming Division of UNIDO and by the Economic Live for CIDCAG.

The objective of the workshop was to trail serior Arab planners and project evaluators in the application of the Marca, when the conditions prevailing in Arab countries. This was the first of a series of workshops to be held at regional, subregional annuational levels in this area to train nationals from different Arab countries in the application of the Marcal.

The training methods used at the workshop were adjusted to suit the diverse theoretical and practical tackgrounds of the participants. The working language was English. All participants has a working knowledge of English.

### I. Organization of the Workshop

#### Agenda

The workshop was officially opened at 9.30 on 2 February 1976. Opening statements were made on behalf of IDCAS by Mr. Azzabi, Acting Director General, and on behalf of UNIDO by Mr. Angelov, International Centre for Industrial Studies.

The training programme consisted of sessions held daily, except Friday, from 9.30 to 14.30. All lectures were delivered in English. The work programme is enclosed as Annex 1.

Dr. I. H. Abdel Rahman, Minister of Planning in Egypt and former Executive Director of UNIDO, visited the workshop on 12 February. After hearing some of the lecturing and discussion, he gave a speech emphasizing two main points: first, the importance of pre-investment evaluation of industrial projects and the useful role of the Manual in providing an operational approach for such analysis and second, the utmost importance of better utilization of existing resources and production capacities in

eveloping rountries and the need for carrying out post investment evaluation of the performance of existing undustrial establishments.

The closury session was held on 14 February 1476. It was invicted to a evaluation of the workshop by the participants. The closing statement was made by Mr. America on tehalf of ThIDO and .DCAS.

## Farticia.ts

The workshop was less, ned for 2" participants from Expt, Sulmi, Lilya, Syria and Iraq. A list of participants is provided in America.

All participants were university graduates, approximately helf of them with a ingree in economics and half in engineering. They all had basic knowledge and practical experience in project evaluation. For some of the participants this was the first apportunity to study in a systematic way the procedures and techniques of evaluation of an investment project.

## The training Programme

The training programme was based on the Manual for Evaluation of National Industrial Investment Projects in Arab Countries. The Suin topics taught at the work topics taught at the work topics taught at the work topics.

- 1. Planning at national, sectoral and project levels;
- Interrelationship between project preparation and project evaluation;
- 3. Basic information needed for project evaluation;
- 4. Evaluation of the commercial profitability of an investment project
  - 4.1. Investment profitability analysis: simple rate of return, pay-back period, net present value, internal rate of return;
  - 4.2. Financial analysis: liquidity analysis, capital structure analysis.
- 5. Evaluation of the national profitability of an investment projects
  - 5.1. Price adjustments
  - 5.2. Value added basic oriterion of national profitability

- 5.3. Application of the value added criterion for evaluation of new investment projects, modernisation/expansion projects, industrial complexes
- 5.4. Additional indices: employment eff: t, distribution effect, net foreign exchange effect, idla casacity effect, international competitiveness
- 5.5. Supplementary considerations
- 5.6. National parameters: social rate of discount, adjusted rate of fereign exchange
- E. Evaluation of commercial and national profitability under uncertainty:
  - 6.1. Brook-even analysis
  - 6.2. Sensitivity analysis
  - 6.3. Probability analysis

In addition to this, two case studies were presented and solved a case study on an integrated cotton spinning and weaving textile
mill and a case study on a urea fertilizer plant. The two case studies
demonstrated the application of the methodology of the Manual on actual
investment projects taken from the area.

Three main documents were handed over to each participants

- Nanual for Evaluation of National Industrial Investment
  Projects in Arab Countries;
- Case Study on an Integrated Cotton Spinning and Weaving Nill;
- Case Study on Urea Fertilizer Plant.

The following lecturers contributed to the workshops

- 1. Mr. N. Ostrowski (Poland)
- 2. Rr. J. Bendekovic (Yugoslavia)
- 3. Nime S. Nontesser (Reppt)
- 4. Mr. N. Aremedi (Reppt)
- 5. Mr. A. S. Ehalil (Reppt)
- 6. Rr. I. Angelow (UNIDO)

# Evaluation and Recommendations

As stated above, the training was the main objective of the workshop. It should be stated however that the to the very interesting discussions which teveloped throughout the two weeks, the meeting appeared in many instances to be more a seminar than a training workshop. Consequently, some questions, comments, observations of the participants were useful enough to be considered for in orporation in the handal turing the final editing. Therefore, the objective of the workshop was achieved and even surpassed. The workshop turned out to be another successful testing of the validity of the Manual to the prevailing conditions in the Arab region.

Following practice established in previous UNIDO/IDCAS workshops, a questionnaire was distributed among the participants to be completed and submitted to the Chairman at the end of the workshop. At this workshop it was even more important to analyze the views of the participants since this was the first time the teaching programme was based entirely on the Manual for Evaluation of hational Industrial Projects in Arab Countries. This was the first direct contact between the Manual and the people who will be using it. In order to provide the best possible conditions for the participants to be objective and frank in answering the questions, they were asked not to put their names on the completed questionnaire. The following is a summary of their

- 1. What he you think about the furation of the workshop?

  Eighty per cent of the participants considered it to be short. The rest found it suitable.
- 2. Which of the Workshop documents did you study?

  All participants except three said they had read the

  Manual. Almost all of them read the textile case study and most the

  urea case study.

3. Which benefits did you gain from the Workshop? To what extent could you apply in your work the knowledge acquired at the Workshop?

With no exception oil post sipports answered very positively to this question. Some extracts are provided below:

- "I have learned new practical methods for evaluation of projects from the point of view of commercial and national profitability";
- "I can apply commercial profitability analysis and national profitability analysis in preparation and evaluation of development projects";
- "The knowledge acquired can be applied and will be applied in my work";
- "I have learned much from 'he workshop. I could use in my office this Manual to a large extent";
- "From the workshop I dil gain many benefits as I got acquainted with the Hanual which I will try to apply in my future work as a planner at the national and regional levels";
- "I gained important knowledge about project evaluation, because I think this fanual comprises I incipal methods of evaluation and I think I can apply them in my work";
- "It increased my knowledge about commercial profitability and national profitability in a practical way. I shall apply most of this knowledge during my work";
- "I gained much benefits because at my work I have to study and evaluate projects of Arab and foreign investments. One of the main points of this Namual is national profitability and particularly the value added generated by a project. From this workshop I learned many things about project evaluation".
- etc.

4. Which parts of the Workshop you enjoyed most and why?

(commercial profitability, national profitability,
corrtainty analysis, ca : studies)

All participants reported that they enjoyed commercial profitability and the case studies; eight-five per cent enjoyed national profitability analysis; sixty per cent of the participants enjoyed equally all parts of the workshop programme.

5. Which parts of the Workshop you did not enjoy and why? (commercial profitability, national profitability, uncertainty analysis, case studies)

Seven participants did not enjoy the lectures on uncertainty analysis because it needs much computational work. One of them felt that uncertainty analysis is not so important. Three participants did not enjoy the case studies.

- 6. What do you recommend for future IDCAS/UNDIO joint afforts in the field of project evaluation in the Arab region in general and in your country in particular?

  The participants put forward the following main recommendations:
  - a) to hold more training workshops on the application of the Kanual at subregional and particularly at national level. The duration of these workshops should be extended. The views on the duration vary from three weeks to two months:
  - b) to prepare a Manual for Evaluation of Regional Investment Projects in the Arab Area, including joint venture projects;
  - c) to prepare a Nanual for Post Investment Evaluation of existing establishments since all countries face the problems resulting from understilisation of evailable industrial capacities:
  - d) to develop the methodology of the Manual no that it can be applied to agriculture and the services sector.

7. What is your opinion about the Arab Manual for Project

Designation? Have you got any recommendations for
improving the Manual?

The main recommendations were the following:

- a) The Manual should be translated and published in Arabic. It should be sent by IDUAS to all Arab countries for application:
- b) Uncertainty analysis should be simplified;
- c) Application of the Manual should be extended to different industrial sectors by elaborating case studies on crude oil extracting, mining industry, petrochemical complex, agro-industrial complex, modernization/expansion project;
- d) Attached to the Manual should be discounting tables with instructions for their use, glossary of basic terms used, other instructions which may be of use to the project evaluator.

The participants' opinion about the Manual was very positive. This can be seen from the following extracts:

- "The Arab Manual for Project Evaluation is severing corry aspect of evaluation. That makes it fore useful and valuable. It is really what the Arab States need for their planned development."
- "My opinion on this Nanual is very useful".
- "My opinion is that the Manual gives us a simple practical scientific method for project evaluation for both Commercial and National Profitability. It would help us to set priorities for our new industrial projects in order to select the best."
- "It is very good Namual, and I think that the discussion during the workshop will enrich it."
- "A mile starts with the first step. The Manual is a good start."

- "It is a gcc i step n, the way of evaluation of industrial projects."
- "I am in the view that the Manual is reasonalle, acceptable and suits the requirements of all countries in spite of the marked difference in their industrial structure."
- "I think this hanual is a good manual which takes in consideration most cases that may happen in Arab countries and also it may be used for special cases which we may face in practice."
- "It is really good."
- "It provides a useful tool in the evaluation of projects. Its contents cover the information needed by the evaluators."
- "The Manual is written in a simple approach, specially the commercial part."
- etc.
