Since market information has been obtained only through much work and effort, results have been included in the Appendix in considerable detail.

For similar reasons some aspects concerning materials and services have also been appended.

Technological calculations and data which are necessary for the interpretation of this prefeasibility study have been presented in this Appendix.

ALL DATA FURNISHED BY STADLER HURTER ENGINEERING SERVICES IS THE PROPERTY OF STADLER HURTER AND IS SUBJECT TO CHANGE AT ANY TIME WITHOUT NOTICE. IT IS FURNISHED ONLY IN CONNECTION WITH THE SPECIFIC SERVICE CONTRACTED FOR AND IS NOT TO BE USED FOR ANY OTHER PURPOSE. STADLER HURTER ENGINEERING SERVICES WILL BE RESPONSIBLE ONLY FOR THE WORK DONE BY IT.

AX. MARKET INFORMATION

AX.1 Import and Export Data

(a) General

During the analysis of paper imports from 1958 to 1969, it can be noted that import of the different types of paper, exception made of newsprint, shows a relatively distorted information, especially for 1967 and 1969, where writing paper imports decrease and "Other Papers" increases. This shows the convenience of gathering the different types in order to have a more consistent general idea.

In this way, imports are relatively reduced only in 1968, while in the other periods, restrictions which have taken place in certain moments, have had no major influence on imports and satisfaction of demand.

Eventual existence of market-regulating stocks must be taken into account. This would result in a new balance point of the market through prices.

It is possible to suppose that this process appeared in those cases when there were significant increases in the rate of exchange, which would temporarily affect imports.

(b) Imports

Agreements

For all item NAB 48.00.00.00, 80% of FOB value is calculated at 5. - \$/u\$. Remaining 20% of FOB plus freight

and insurance is calculated according to financial market quotation of the date of the operation.

FOB value includes consular fees. In case of payment of interests, they are paid as above (80 and 20%). There is no previous deposit nor previous payment.

Operation can be taken by letter credit, document, etc., but there are restrictions with respect to payment terms. When original payment date is modified, or when payment is delayed for more than 5 days after maturity date, Central Bank must authorize the operation.

Payment conditions are regulated by Telephonic Despatch # 2522 of 22/X/71. The remaining regulations correspond to Circular RC 409, RC 414 and RC 419.

Printing paper with water lines

- 5% on CIF value (Decree # 2524/70)
- without previous deposit
- 10% on CIF value (exception made of LAFTA countries)

Security paper for bank notes

- Free of charge (Decree # 1410/67)
- Without previous deposit

Bible paper with water lines for printing

- 5% on CIF value (Decree # 2524/70)
- without previous deposit
- 10% on CIF value, exception made of LAFTA countries

Illustration paper with water lines for printing

- 5% on CIF value (Decree # 2524/70)
- Without previous deposit
- 10% on CIF value, exception made of LAFTA countries

Other printing papers

- 100% on CIF value (Decree # 2524/70)
- 10% on CIF value, exception made of LAFTA countries

Kraft for sacks

- 100% on CIF value (Decree # 2524/70)
- without previous deposit
- 10% on CIF value exception made of LAFTA countries

Note: Law 19,327/71 created an import duty of 15%, which will be applied to merchandise from any origin, exception made of Uruguay, Paraguay, Bolivia and Ecuador (Decree # 5388).

- Import Freights

Freights for pulps are the following (average):

Scandinavian countries: 30 u\$s/T

USA - Canada: east coast: 36 u\$s/T; west coast: 40 u\$s/T

Chile: between 15 and 18 u\$a/T

- Import Insurance

For newsprint, against all risks (average):

8.10% Canada-USA-United Kingdom-France-Sweden-Finland-Norway

10.80% Australia

7.02% Brazil

6.20% Japan

- Import Routes

Transportation must be done in classified ships of

no more than 20 years, according to regulations in force.
Insurance company must be Argentine.

Most imports are through Buenos Aires port. Zarate is also used, and there is a Government warehouse used by the companies of that region in order to regulate production/consumption ratio.

With respect to imports from Chile, they also arrive in ships. Land imports are limited and only in special circumstances.

Source: Inquiries in different companies.

(c) Exports

Although total exports decreased during 1968 in a 6.8%, mainly due to decreased shipments of meat and corn, Argentina had a good place in the market. Non traditional products exports improved in a 33%, increasing their participation in total exports, from 12% to 18.4%. A little part of this increase corresponds to the first shipments of offset paper.

Paper production installations began only in 1965, using bagasse as raw material. First shipment was made in 1967, and consisted of 10 T exported to Paraguay. In 1968, 1600 T of offset paper were shipped to USA, 315 T to Ecuador, 250 T to Paraguay, 35 T to Peru and a sample of 6 T to Bolivia. But real exports begin only in 1969, with a 5,100 T shipment to USA, representing more than u\$s 1,000,000.

According to information from the producers and exporters, although the opening of new export markets demanded great efforts, the increasing domestic demand modified the company's exporting policy, in order to cover local market demand. Efforts made have lost, in consequence, their effectivity, as they have had no continuity.

(d) Agreements

Item NAB 48.00.00.00 is regulated by Decree # 5062/71. 40% of FOB value is calculated at financial rate of exchange; 60% of FOB value at commercial rate of exchange.

Circular RC#363 establishes that terms can be freely agreed by the interested parties; operations need no banking approval.

Items NAB 48.01.00.00 to NAB 48.17.00.00 and NAB 48.18.00.00, and from 48.19.00.00 to 48.21.00.00 are contemplated in Decree # 3255/71 which establishes tax reimbursements for non traditional exports, of 10% on:

- FOB value when export is carried out on foreign transportation and with foreign insurance;
- CI value when insurance is contracted in the country;
- C and F value when transportation media are Argentine;
- CIF value when both transportation and insurance are Argentine.

3.3.3. Installed Capacity and Expansion of Installed Capacity

A very important observation must be taken into account which considering installed capacity tables, in order to avoid mistakes. This refers to following chapters, too:

CONADE says that, "... the great versatility of equipment complicates determination of installed capacity by type of paper. There are plants which normally produce a wide range of types and qualities with the same equipment. Due to this fact, any division of installed capacity by type of paper would be arbitrary, and could give a distorted impression of local paper industry situation in some of its aspects". (CONADE - "Diagnosis and Projections of Paper and Cellulosic Pulps used in its Production" - Industry and Mining Sector - 1965).

With reference to unused capacity, the equipment is in general in condition to be started-up without great technical problems.

The situation of closed plants is different. In many cases, it is not probable that they could be started-up again. These have not been considered in the corresponding tables, unless the probability of opening them is good. This is the case of Celulosa Bell-Ville, in Córdoba.

Ledesma S.A. intends to expand their production capacity. Their plant is located in Jujuy. Expansion is foreseen for 1972 in 5,000 T/yr of different papers, especially printing.

In 1965 Ledesma started a paper mill based on bagasse, which

had been used as fuel up to that time .

Ledesma produces presently 30,000 T/yr and their expansion program includes a minor improvement in 1972 - on the basis of the main equipment of the plant - which will increase their capacity to 35,000 T/yr. In 1976 a second continuous machine will be installed, having the same capacity as that presently in operation (this will double capacity of production for bagasse bleached cellulose, recuperation of reactives, etc), which will increase annual production to 70,000 T; with reference to projected market for printing and writing, in 1975 Ledesma will cover 30% of the same, especially in "Papel Ohrs" item.

Source: Present and Future Situation of Paper and Cellulose Industry in Jujuy - Provincial Government - September 1970

Celulosa Argentina S.A. estimate that in about seven years they would have invested 100/120 million dollars in their plants. In 1969 this company submitted important projects amounting to 65 million dollars, for expansion of capacities for their plants in Cap. Bermúdez (Sta. Fe), and Puerto Piray (Misiones), and installation of a new plant for cellulose production, in Puerto Piray also, and for increases in capacity of production of paper in Bernal and Zárate (Buenos Aires) plants.

ALL DATA FURNISHED BY STADLER HURTER ENGINEERING OFFICE IS THE PROPERTY OF STADLER HURTER AND IS SUBJECT TO RETURN AT ANY TIME UPON DEMAND. IT IS FURNISHED ONLY IN CONNECTION WITH THE ORIGINAL ASSIGNMENT AND CANNOT BE REPRODUCED, COPIED, LOANED OR USED FOR ANY PURPOSE DIRECTLY OR INDIRECTLY DETRIMENTAL TO THE INTERESTS OF STADLER HURTER. REPRODUCTION PERMITS WILL BE GRANTED.

There are no detailed statistics to give exact figures of consumption distribution, but according to per capita consumption and taking into account the main urban centers, we could establish the following relation:

- Federal Capital and Great Buenos Aires
- Córdoba
- Rosario
- Santa Fe
- Bahía Blanca - Mendoza - Mar del Plata
- Resistencia - Corrientes - Tucumán

The following observations have been made concerning the above production figures:

- (i) Installed capacities include other products, as shown in tables corresponding to these products.
- (ii) PAPELERA RIO CORONDA SRL increased their installed capacity, from 1969 to 1970, from 650 to 850 T.

ALL DATA FURNISHED BY STADLER JUVIER ENGINEERS & CONSULTANTS IS THE PROPERTY OF STADLER JUVIER AND IS SUBJECT TO REVIEW BY ANY THIRD PARTY WHOSE INTERESTS ARE AFFECTED BY THE RESULTS OF STADLER JUVIER ENGINEERS & CONSULTANTS WORK. CONSULTANTS WILL NOT BE RESPONSIBLE FOR THE RESULTS OF STADLER JUVIER ENGINEERS & CONSULTANTS WORK.

ALL DATA FURNISHED BY STADLER HURTER ENGINEERS CONSULTANTS IS THE PROPERTY OF STADLER HURTER AND IS SUBJECT TO RETURN AT ANY TIME UPON DEMAND. IT IS FORWARDED ONLY IN CONNECTION WITH SPECIFIC ENGINEERING PROJECTS AND IS NOT TO BE REPRODUCED OR TRANSMITTED IN ANY FORM OR BY ANY MEANS, ELECTRONIC OR MECHANICAL, INCLUDING PHOTOCOPYING, RECORDING, OR BY ANY INFORMATION STORAGE AND RETRIEVAL SYSTEM. PERMISSION TO REPRODUCE THIS DOCUMENT IN WHOLE OR IN PART MUST BE OBTAINED FROM STADLER HURTER ENGINEERS CONSULTANTS.

(iii) In CELULOSA JUJUY S.A. production, 1970, both Ciudadela plant and San Pedro plant are included (Total 7,878 T).

(iv) CELULOSA ARGENTINA Production for 1969 is 2,264 T.

Projected expansion programmes for the various plants producing tissue are as follows:

(i) PAPELERA MOSCON

Location of plant: General Pacheco - B.A.

Production to be faced: 3,000 T/yr

Note: In advanced study

(ii) PAPELERA MORON

Location of Plant: Moron - B.A.

Production to be added: 2,600 T/yr

Note: In production

Thus, for tissue, unused capacity is approximately 2,000 tons and expansion projects amount to approx. 5,500 T.

Marketing specifications for various tissues are as follows:

- Toilet paper

It is furnished in different types of packings, in parcels or boxes from 2 to 96 units. Specifications per unit:
Width: 108 mm.; Weight: 22/27 g/cm²; Length: 34, 48 and 74 mt.

- Paper napkin and towelling

There are no official specifications, size and presentation vary according to manufacturers.

Prices for various tissues vary as follows:

- Toilet paper: Mill price unit 74 mt. \$0.275/1.15 each

... ..

... .. Bill price \$ 0,2080

(c) Pulp

R-107A/P/7/9/1 - 107A-107A

The production of short fibre pulp is a significant part of the domestic market. Whiting 10% consists of two special pulps, which are imported. In view of the projection of the demand, the unused installed capacity and existing projects according to BIRA estimations, we do not feel there is any possibility of considering this production for the new mill, unless the production costs are much lower than those of pulps from other raw materials.

	1,850	units	of	40	kg(s)
	15,619,949	units	of	50	kg(s)
- <u>Jute</u>	2,210	units	of	60	kg(s)
	30,282	units	of	65	kg(s)
	7,121	units	of	68	kg(s)
	1,431,070	units	of	70	kg(s)
- <u>Cotton</u>	42,000	units	of	50	kg(s)
- <u>Polyester</u>	30,539	units	of	70	kg(s)

Source: Argentine Sugar Center 1970

50-kg Sacks

Net weight per unit	450 gr	common sugar
	540 gr	sugar for refinery
	470 gr	granular sugar

Paper sack weight varies according to the type of sugar, and it is due to the type of paper used.

- Domestic Trade: All sugar is commercialized in paper sacks, that of 450 gr. being the most common
- Foreign Trade: Jute sacks are used, as required by importers. They can be first or second hand, or have several uses. There is a trend to replace jute sacks by paper, but to the following reasons:

(1) Jute sack requires return, (2) thus, it represents higher costs, (3) paper sacks have a lower manufacturing cost.

Price for 50-kg Sugar Sack

Price was between 0.940 and 1.276 in 1971.

Price for 50-kg Jute Sugar Sack

During 1971 price was \$2.70, varying with dollar quotations.

Only Cruz Alta (Córdoba) sugarmill use this type of sack. (C.A.A.)

Selling prices for sack and wrapper in the various forms in which it is used are as follows:

Kraft for cement type sack - 500 units	2.66 to 2.95 \$/kg
Kraft for cement type sack - per roll	2.60
Kraft for wrapper	1.60
Bleached kraft for wrapper	2.10
Extra kraft for wrapper	1.95
Wrapper in rolls	2.10
Semipure kraft for sacks	2.20

Source: BIRA

(*) Estimated

The Provincial Government in Jujuy stated that expansion projects in their area included that of Celulosa Jujuy S.A. who plan to increase production by 6,000 tons per year in 1970, 15,000 tons per year in 1971, 30,000 tons per year in 1972 with 45,000 tons per year in 1975.

According to BIRA, Schcolnik S.A. project a corrugating medium production of 30,000 T/yr. The project is presently being studied by the authorities. Zucamor S.A. is implementing an expansion of 12,000 T/yr, and Celulosa Bell Ville is planning opening their inactive plant, with a 6,000 T/yr. production. According to the same source, Papelera Misiones S.A. are planning a 35,000 T/yr kraft corrugating medium production, which is estimated to start-up in 1973.

The following companies produce corrugating medium using

bagasse as raw material:

- CELULOSA ARGENTINA S.A. (Tucumán); they use:
 - 32 T bagasse pulp from bleached cane
 - 1,449 T bagasse pulp from unbleached cane

These pulps are prepared in the plant, using 5,481,441 kg of bagasse (1970 data)

- CIA. AZUCARERA DEL NORTE S.A. (Leales Sugarmill); they use:
 - 1,884 tons of bagasse pulp from unbleached cane (1969) and 2,746 T of bagasse pulp from unbleached cane (1970)

This pulp is prepared in their plant, using 10,812,000 kg of bagasse in 1969 and 13,731,200 kg in 1970 (50% moisture)

- CIA. PAPELERA DEL NORTE DE SANTA FE; they use:
 - 6,572 tons of bagasse pulp from unbleached cane, 1969 and 3,017 T in 1970

They prepare this pulp in their plant, using 8,116,000 kg of bagasse (1969) and 3,453,109 kg in 1970.

Linerboard and corrugating medium production is used almost completely for corrugated boxes manufacture. Consumption reached about 250,000,000 units in 1968 (approx. 22,000,000 boxes per month).

In 1969 production increased to 24,760,000 boxes approximately, and in 1970 about 26,400,000 boxes. Main manufacturers are those who also produce linerboard and corrugating medium (Schcolnik, Zucamor, Celulosa Argentina,

ALL DATA FURNISHED BY STADLER HURTER ENGINEERS CONSULTANTS IS THE PROPERTY OF STADLER HURTER AND IS SUBJECT TO REVIEW BY THE CLIENTS. IT IS FORWARDED ONLY IN CONNECTION WITH SPECIFIC ENG. SERVICES AND CANNOT BE REPRODUCED, COPIED, LOANED OR USED FOR ANY PURPOSES WITHOUT THE WRITTEN PERMISSION OF STADLER HURTER ENGINEERS CONSULTANTS.

ALL DATA FURNISHED BY STADLER, HURTER ENGINEERS OFFICES IS THE PROPERTY OF STADLER, HURTER AND IS SUBJECT TO REVIEW AT ANY TIME UPON REQUEST BY THE CUSTOMER. IT IS UNDERSTOOD THAT NO REPRODUCTION OR TRANSMISSION OF ANY INFORMATION CONTAINED HEREIN IS TO BE MADE WITHOUT THE WRITTEN PERMISSION OF STADLER, HURTER ENGINEERS. CONSULTANTS. LIMITED LIABILITY COMPANY. (REPRODUCTION PERMITTED BY THE PERU GOVERNMENT.)

etc.). There are no imports. High import duties prevent use of imported boxes, and no change is foreseen in this policy.

The average weight per box is 450/500 grams. Wood box price is \$a3.70 and corrugated boxes for export are about \$a3.60.

It is practically impossible to obtain prices since most packing manufacturers produce linerboard and corrugating medium and are not willing to furnish data.

With respect to those selling their products, they vary technical characteristics according to purchase orders. Marketing policies fix prices (sometimes they are lower than costs, due to industrial or management policies).

As guiding information, the following were average selling prices during the last months of 1971:

- Corrugating Medium	Grey paper	\$a 0.87 to 0.93	/kg
	from bagasse	\$ 0.90	/kg
	from corn	\$ 0.965	/kg
- Linerboard	Third class	\$ 0.95	/kg
	Second class	\$ 1.55	/kg
	First class	\$ 2.00	/kg

There are practically no exports and imports to or from LAFTA countries. Figures mentioned under linerboard divided by 2 - give approximate total exports of Peru. The same could be said of installed capacity, unused capacity and projects. In all cases, half of the given amounts give an approximate idea of the

corrugating medium situation. Thus, production figures are equivalent to consumption for both products.

With respect to corrugating medium, imports in 1970 were 7.5 tons from Venezuela and 60.7 tons from Mexico.

Peru exported 49 tons in 1960, 18 tons in 1961, 166 tons in 1963, amounting to 20,000 dollars. There are no more exports up to 1966 (last data available).

In all LAFTA countries there are unused capacities of production. Chile which increased their production threefold in 5 years to 14,000 tons in 1967 had an installed capacity of 16,000 tons at that time. There are no expansion projects (up to 1970).

In 1967, Brazil - second producer - had an unused capacity of about 20,000 tons. But there are new plans under study and/or implementation to increase installed capacity to about 160,000 T/yr in 1975.

In 1966, Mexico - first producer - had an unused capacity of about 67,000 T. But there are projects to increase total installed capacity to 211,000 tons in 1970.

Paraguay, where no linerboard is produced, has an installed capacity of 1,700 tons. In Peru there was an unused capacity of about 13,000 tons in 1964, the year latest figures were available. And up to 1970 foreseen growth is about 800 T. In 1966 Uruguay had an unused capacity of 1,300 T. There are no expansion plans - up to 1970. Venezuela had in 1966, an unused

capacity of 12,000 T. Increase for 1970, however, does not reach 1,000 T.

(f) Particle Board

According to evolution of consumption and expansion projects already approved, there seems to be no possibility to replace wood particle boards, unless manufacturing costs are much lower.

With respect to use of particle boards for framings - according to information from Argentine Construction Board - replacing white South American pine imported from Brazil was not considered feasible by any of the studies carried out, due to technical and pricing reasons.

(g) Hardboard

There is only one mill in the country, which manufactures this product (FIPLASTO SACI), located at Ramallo, B.A., in 1949. They used, as raw material, "caña de Castilla", but due to the continuous increases in costs, they decided to use eucalyptus wood from the Delts of the Paraná River.

According to the SNF, in reference to the hardboard market, a slow evolution of this mill is observed, with a significant recess in 1964. Up to 1965, the production was absorbed by the domestic market. Since 1965, there has been difficulties to place the product in the country, due to the strong competition of particle-board. This fact provokes exports.

And, on the other hand, there is an intent of diversifying the uses of hardboard opening new possibilities: drilled boards; use of phenolic resins to increase

ALL DATA FURNISHED BY STADLER, HURTER ENGINEERING OFFICES IS THE PROPERTY OF STADLER, HURTER AND IS SUBJECT TO RETURN AT ANY TIME UPON DEMAND. impermeability and facilitate their use outdoors; different finishing of surfaces, leather imitation, etc.

The low consumption of insulating boards, and the fact that imported products are strongly placed in the market, and at the beginning of a very important competition of plastic products, show that, on one side, the development of a national industry has been impossible and, on the other hand, it is not economically feasible to install another mill for these products.

No substantial increase of hardboard consumption is foreseen, according to the historical projection of consumption and a still greater reduction in the next years due to other factors (increase of particle board, introduction of new products in the market). If we add to all this, the expansion of FIPLASTO plant, it is clear that the installation of a new hardboard mill is impossible.

There are no imports.

During a long time, there were only sporadic exports, having no importance, to Bolivia, Peru and Paraguay. After FIPLASTO expansion, and after some previous market studies, it is expected to export to USA and ports of the Atlantic Ocean.

Linerboard	<u>2,686,300</u>
Total	\$ ^a 4,169,700

BX.4 Bagasse Requirements and Costs

(a) General

Cost of bagasse includes the following:

1. Fuel replacement value: Calculated according to the generally accepted ratio of 1 ton of oil = 3 tons of O.D. bagasse.

Actual calorific value of bagasse at 50% H₂O = 1,825

Cal./Kg. with variation of 45 Cal./Kg./1% moisture.

Calorific value of oil 10,300 Cal./Kg.

Natural gas 9,300 Cal./m³

Bagasse replacement equivalent 3,434 Cal./Kg. O.D.
(at 50% H₂O)

ALL DATA FURNISHED BY STADLER MODEL ENGINEERS, CONSULTANTS IS THE PROPERTY OF STADLER MODEL ENGINEERS, CONSULTANTS AND IS SUBJECT TO REVIEW AT ANY TIME UPON DEMAND. IT IS FURNISHED ONLY TO THE CLIENT AND IS NOT TO BE REPRODUCED OR TRANSMITTED IN ANY FORM OR BY ANY MEANS, ELECTRONIC OR MECHANICAL, INCLUDING PHOTOCOPYING, RECORDING, OR BY ANY INFORMATION STORAGE AND RETRIEVAL SYSTEM. STADLER MODEL ENGINEERS, CONSULTANTS ACCEPTS NO LIABILITY FOR ANY ERRORS OR OMISSIONS. STADLER MODEL ENGINEERS, CONSULTANTS IS NOT RESPONSIBLE FOR ANY DAMAGE TO PERSONS OR PROPERTY ARISING FROM THE USE OF THE INFORMATION CONTAINED HEREIN.

2. Labour costs for bagasse handling and preparation include loading on trucks or conveyors.
3. Power cost for depithing, conveying, etc.
4. Maintenance for depithers, conveyors, etc.
5. Transportation to the pulp mill (assuming trucking to be by contract)
6. All cost figures in pesos Lev 18,188 except as noted.

Note: Capital costs of equipment are not included.

(b) Model I Corrugating Medium - 166 MTD A.D. for 340 Days/Yr.

Total moist depithed bagasse to pulp mill = 83,960 ODMT/Year

This amount includes washing losses, storage losses of approximately 10% of bagasse stored plus the required amount of depithed and washed bagasse to the digesters.

No. Days of Bagasse Deliveries

Crushing season - 82 days/year at 6 days/week

Rate of daily deliveries at 21 hours per day $\frac{1023.9 \text{ ODMTD}}{48.8 \text{ ODMT/H}}$

Washing rate at 7 days/week at 95 days/year 883.79 ODMT/D

Fuel Replacement Value

3 ODMT bagasse = 1 MT oil = 1,107.5 m³ natural gas

Tons of oil required to replace 83,960 ODMT bagasse = 27,987

= m³ of natural gas 30,995,603 m³/year

ALL DATA FURNISHED BY STADLER, HURTER ENGINEERING OFFICES IS THE PROPERTY OF STADLER, HURTER AND IS SUBJECT TO RETURN AT ANY TIME UPON DEMAND. IT IS FURNISHED ONLY IN CONNECTION WITH THE ENGINEERING ASSIGNMENTS AND CANNOT BE REPRODUCED, COPIED, LOANED OR USED FOR ANY PURPOSE DIRECTLY OR INDIRECTLY DETRIMENTAL TO THE INTERESTS OF STADLER, HURTER ENGINEERING OFFICES.

*Average monthly flow required (12 months) = 2,582,967 m³/month

Assuming that all bagasse will be taken from one sugar

mill only:

First	900,000 m ³ /month	73,451.4 Pes.
Next	1,682,967 m ³ /month	128,073.8 Pes.
		201,525.5 Pes./mo.

2,418,302 pesos/year = 28.80 pesos/ODMT

Replacement fuel value - Pesos 28.80/O.D. ton

*Note: Total gas will be required during ingenio operating period only but for conservative cost figure, average flow over 12 months has been used.

Labour Cost

Daily rate at 82 days/year = 83.960 MT/.82 = 1023.9 ODMT of accepted bagasse.

No. of moist depithers 3 large

Labour required 1 operator

1 helper

Daily rates Operator \$20.72/day + 60% = \$33.152/day

Helper \$18.40/day + 60% = \$29.44/day

No. net operating days in Concepcion sugar mill 82 days/year

No. gross operating days in Concepcion sugar mill 90 days/year

90 x 33.152 = \$2,983.68

90 x 29.44 = \$2,649.60

Total cost/shift for 90 days = \$5,633.28

To allow for shift differential and overtime, assume

3.5 men per shift job at 3.5 shifts per day =

$$3.5 \times 5633.28 = 19,716.48$$

$$\text{Overhead (20\% \dagger)} \quad \underline{3,940.52}$$

Total cost for season \$^a 23,657.00

Total O.D. tons of bagasse processed: 83,960 Tons

Labour cost - bagasse processing at the sugar mill per

ton O.D. bagasse = \$0.2818

Power Cost for Moist Depithing.

Connected Load :	Intake belt conveyor	20 HP
	Transfer conveyor	10 HP
	Distribution conveyor	20 HP
	Feeders	15 HP
	Depithers	750 HP
	Overflow Ret. (2)	20 HP
	Accepted conveyor	15 HP
	Pith conveyor (2)	<u>20 HP</u>
		870 HP = 650 KW

Power consumed: (0.8 load factor)

$$650 \times 24 \times 0.8 = 12,480 \text{ kwh/day}$$

Assuming 100 days operation:

$$\text{KWH per 26 day month} \quad 324,480$$

$$\text{KWH for extra 10 days} \quad 124,800$$

Stadler Hurter

Average Cost of Bagasse from all Ingenios

Bagasse from:

Ing. Concepcion	113,000 MT O.D./year	3,471,365
Ing. San Juan	32,100 MT O.D./year	1,364,216
Ing. San Pablo	59,100 MT O.D./year	2,676,545
Ing. Cruz Alta	24,300 MT O.D./year	1,156,003
Ing. La Florida	<u>12,740 MT O.D./year</u>	<u>749,855</u>
	241,240 MT O.D./year	9,417,984

Average cost = 39.040/MT O.D.

BX.5 Fuel Cost

(a) Model I (Corrugating Medium)

In order to produce the required amount of product the

following quantities of steam will be required:

137.8 ODMTD Slush pulp x 1.3 MT/T	=	179.14 MT
166 ADMTD Corrugating Medium x 4.0 MT/T	=	<u>664.00 MT</u>
Total steam/day		843.1 MT
Total steam/year		286.668 MT

Steam contains 610,000 Kg.Cal./Ton

Therefore, total kg.cal./year = 174.8×10^9

If boiler efficiency is 85% and natural gas has 9,300 Kg./Cal/m³

annual usage of natural gas becomes -

$$\frac{174.8 \times 10^9}{9,300 \times .85} = 22,112,500 \text{ m}^3$$

Average monthly consumption becomes $\frac{22,112,500}{12} = 1,842,708 \text{ m}^3$

Using tariffs in effect in May 1972 the average monthly gas

ALL DATA FURNISHED BY CLIENTS, SUBJECT TO VERIFICATION BY THE ENGINEERS AND CONSULTANTS. THE ENGINEERS AND CONSULTANTS ARE NOT RESPONSIBLE FOR THE ACCURACY OF THE DATA FURNISHED BY THE CLIENTS.

billing becomes:

For first 900,000 m³ cost \$^a 73,451.4
For remaining 942,708 m³ at 0.0761 cost 71,740.0

Cost per month \$^a 145,191.4

Cost per year \$^a1,742,300

(b) Model II (Linerboard)

In order to produce the required amount of finished product
the following quantities of steam will be required:

204.6 ODMTD Slush pulp x 1.5 MT/T = 306 MT
330 ADMTD Linerboard x 4.0 MT/T = 1,320 MT
Total steam/day = 1,626 MT
Total steam/year = 552.840 MT

Since steam contains 610 kg.cal/ton, 85% boiler efficiency
and natural gas contains 9,300 kg.cal./m³, the amount of
natural gas to be used by the plant will become

$$\frac{610,000 \times 552.840}{9,300 \times 0.85} = 42,660,600 \text{ m}^3/\text{year}$$
$$= 3,555,050 \text{ m}^3/\text{month}$$

Using tariffs in effect in May 1972 the average monthly gas

billing becomes:

For first 3,000,000 m³ cost \$^a 233,261.4
For remaining 555,050 at 0.0742 cost 41,184.7

Cost per month \$^a 274,446.1

Cost per year \$^a3,293,400.0

ALL DATA FURNISHED BY STADLER HURTER ENGINEERS CONSULTANTS IS THE PROPERTY OF STADLER HURTER AND IS SUBJECT TO REVIEW BY THE MEMBERS OF STADLER HURTER ENGINEERS CONSULTANTS.
