Introduction

In this second issue, a revision has been made of the first preliminary list issued in March 1978 of publications and papers concerned with the analysis of structural changes in developed countries as these relate to increased trade with developing countries and to other socio-economic factors. New titles are marked with an asterik. The titles are shown in the original language, an English translation being given in brackets if necessary. The titles are grouped under the following headings:

1. Analyses and projections of structural changes in individual developed countries
2. Regional and global analyses and projections of production, trade and employment
3. Sectoral studies, including technological forecasts
4. General adjustment and trade policy issues
5. Methodological papers

The list remains of necessity incomplete. However, it will be regularly updated and sent to institutes and individuals active in this field. Any additional information on related material and suggestions regarding form and dissemination of the bibliography would be highly appreciated. Please forward your comments to: Mr. Herman Muegge, Industrial Development Officer, Global and Conceptual Studies Section, ICIS, UNIDO, P.O. Box 707, A-1011 Vienna, Austria.
