Introduction

1. The present document on the programme of Special Industrial Services forms part of the Report on 1968 Activities of UNIDO as an addendum to document ID/B/43.^{1/} In addition to the 1968 activities under this programme, it contains an account of the development of the programme including its financial status, the foreseeable trends within 1969 and the anticipated evolution and repercussions of the programme on the future activities of UNIDO. The SIS programme was established to provide added facilities and resources over and above the conventional technical assistance programmes. Experience has shown that the SIS programme represents a dynamic component of the operational activities of UNIDO. The present report aims at providing information on various aspects of the SIS programme in order to enable the Board to assess this programme, including the need for adequate resources to respond effectively to a wide range of requests associated with the development of industry.

I Development of the programme

2. Provisional administrative procedures were set up at the beginning of 1966 in collaboration with UNDP for the launching and implementation of the SIS programme. Arrangements were made with UNDP for the submission of requests, normally through the UNDP resident representatives in the field, but also directly to UNIDO. In either case, the arrangements provided for mutual consultations between UNIDO (during 1966, the Centre for Industrial Development) and UNDP. These arrangements are still in force and have proved to be satisfactory and efficient for the establishment, appraisal, financial programming and approval of projects.
3. The first official requests were received in March 1966 and by the end of that year the number of approved projects was 38, with a total value of \$500,000. During 1967, after the establishment of UNIDO, the value of approved projects increased to a cumulative total of about \$3 million.

^{1/} Information on the background of the establishment of the SIS programme is contained in the earlier reports of the Executive Director on the programme of Special Industrial Services (documents ID/B/7 of 15 March 1967 and ID/B/22/Add.1 of 26 February 1968; see also document A/60/10/Rev.1 of 27 October 1965, "Organizational arrangements for industrial development and provision of additional financing on a voluntary basis for operational activities").

4. During 1968, the number of projects approved and those under processing reached a cumulative total value of about \$6.4 million. The evolution of the programme during the first years of its existence corresponded to initial expectations; thus 1966 can be considered as the "building-up" period after which the size of the programme increased rapidly throughout 1967 and 1968. The following tables show the development of the programme since 1966.

Table 1

Summary of requests and projects from the inception of the SIS programme to 31 December 1968 (yearly figures)

	<u>Number of requests submitted to UNIDO</u>	<u>Number of approved projects</u>	<u>Number of projects started during the year</u>
1966	77	38	26
1967	248	140	47
1968	<u>237</u>	<u>157</u>	<u>133</u>
Total	<u>562</u>	<u>335</u>	<u>206^{a/}</u>

a/ Of which 168 were completed.

Table 1a

Status of the SIS programme by regions as of 31 December 1968

	<u>Number of projects approved (cumulative figures)</u>	<u>Number of projects completed or under implementation (cumulative figures)</u>
Africa	146	86
The Americas	59	35
Asia/Far East	74	51
Europe/Middle East	39	29
Interregional	<u>5</u>	<u>5</u>
Total	<u>323^{a/}</u>	<u>206</u>

a/ Thirty-two approved projects were subsequently cancelled at the request of the Governments which accounts for the difference between this figure and the cumulative figure of 323 projects in table 1.

Details on the above table appear in the annex to this document.

5. After the processing and approval of requests, there is an inevitable time lag because of the delays in recruitment and appointment of experts. This lag, which was particularly pronounced in the early phases of the programme, was substantially reduced by the end of 1968 as a result of various measures referred to in subsequent paragraphs of this document.

II Financial aspects

6. Document ID/B/7 presented to the first session of the Industrial Development Board, described the arrangements which were made at that time for setting up the SIS Trust Fund. It may be worthwhile however to recall the following three aspects of the Programme.

- (a) It was established exclusively for industrial development activities in view of the special needs existing in this field;
- (b) The arrangements for the administration of the Fund were aimed at providing a large degree of flexibility to ensure rapid action on the implementation of the projects;
- (c) The Fund was to be financed from voluntary contributions.

7. Table 2 shows the status of contributions or pledges by contributing Governments as of 31 December 1968.

Table 2
Contributions to the SIS Trust Fund as of
31 December 1968

<u>Country</u>	<u>Date of plodge</u>	<u>US dollars</u>
Netherlands	6.12.1965	833,333
United Kingdom	20.12.1965	840,101
United States	18. 1.1966	2,000,000
Sweden	20. 1.1966	500,484
Federal Republic of Germany	16. 8.1966	1,000,000
Netherlands	6.10.1966	833,333
Federal Republic of Germany	25.11.1966	1,000,000
Belgium	22.12.1967	200,000
Finland	22.12.1967	50,000
Japan	18. 3.1968	150,000
Federal Republic of Germany	4.12.1968	1,000,000
Total		8,407,251

8. The value of projects approved from the inception of the programme to 31 December 1968 amounted to \$4,768,485; the total obligations incurred amount to \$2,076,783.

9. Table 3 below shows the financial status of the SIS programme at the end of 1968.

Table 3
Financial status of the SIS programme at the end of 1968
(in US dollars)

	<u>Commitments</u>	<u>Resources</u>
Pledges		8,407,251
Overhead costs	833,152	
Value of the approved programme	4,768,485	
Value of projects approved by UNIDO and referred to UNDP for concurrence	1,127,500	
Estimated cost of new requests in the pipeline being processed by UNIDO	<u>600,000</u>	
Total	7,329,137	8,407,251
Balance	1,078,114	

III Activities under the SIS programme during 1968

10. The assistance rendered under the SIS programme in 1968 and in the previous years, covered in part a wide range of services required by Governments for the implementation of projects in the manufacturing field until the necessary capital investment had been secured; in part, SIS assistance provided "trouble-shooting" services to manufacturing enterprises, and in other instances, assistance was urgently required on an ad hoc basis in matters concerning industrial development policies.

11. While in general the activities under the SIS programme require short-term missions, it was soon recognized by UNIDO and UNDP that in certain special cases longer term projects should also qualify for assistance when justified by urgency and lack of alternative financing. Accordingly, several projects of this nature were carried out in 1968.

12. Several of the Special Fund projects in the field of industry which have been either approved by UNDP in 1968 or submitted by Governments have been identified, developed and activated in their initial phases through SIS missions. The following examples may be cited:

- | | |
|----------------------|---|
| Bolivia | - Experimental Production Plant for Asbestos Processing, Cochabamba (BOL-20) * |
| Ghana | - Assistance to the Ghana Industrial Holding Corporation (GHA-28) |
| Libya | - Centre for Industrial Development (LIB-12) |
| Mauritius | - Industrial Promotion Centre |
| Pakistan | - Centre for the Organization and Development of the Jute Industry, Dacca (PAK-48) |
| Tunisia | - Centre for the Development of Prototype Tools (TUN-27) |
| United Arab Republic | - Demonstration Pesticides Production Plant, based on Chlorine and Bromine Resources (UAR-69) |
| United Arab Republic | - Central Textile Technology Development Centre (UAR-62) |

IV Over-all analysis of the development of the SIS programme

13. A number of exploratory missions undertaken in 1967 led to further assistance in 1968. In the same way, it is expected that the completion of a number of missions which were started in 1968 will have materialized in the form of further assistance in 1969 to the development of the industrial sector. The picture would be incomplete however if the analysis of the programme were made only for the activities in 1968. Thus, it was found appropriate to provide an analysis in a cumulative form from the inception of the programme, so as to give a more comprehensive picture of the development of the programme.

14. Tables 4, 5, and 6 below provide a breakdown of the different aspects of the SIS programme, in particular the nature of the projects requested, the various industrial fields in which such assistance was requested, the distribution of projects in the various geographical regions and other aspects related to the programme as a whole. Information is also provided on the state of implementation and on the proportion in which outside individual experts, staff members and consultant firms have contributed to the programme.

15. A comprehensive list of requests received and approved under the SIS programme since March 1966 appears in the annex where all projects are listed by regions and countries with indication of the status of implementation.

Table 3
Number of SIS-approved projects as of 31 December 1967, by
categories and regions

	<u>Africa</u>	<u>The Americas</u>	<u>Asia/ Far East</u>	<u>Europe/ Middle East</u>	<u>Inter- regional</u>	<u>Total</u>
<u>CATEGORY I</u>						
<u>Ad hoc</u> assignment of high-level experts whose services may be requested on relatively short notice to advise on specific questions related to the preparation and implementation of industrial projects.	48	17	20	10	-	95
<u>CATEGORY II</u>						
Assistance in the different stages of new manufacturing projects, particularly in respect of practical needs during the post-feasibility stage of the project, until appropriate financing is assured.	17	6	1	7	-	31
<u>CATEGORY III</u>						
Expert services on an intermittent basis to make specialists available for brief periods during the development of the project, whenever the need for the particular skill arises.	1	2	1	1	-	5
<u>CATEGORY IV</u>						
Co-operative attention of various specialists to industrial projects involving complex manufacturing techniques through <u>ad hoc</u> arrangements with specialized institutions or experienced consulting engineering organizations which are prepared to make their services available on short notice.	1	1	1	2	1	12

Table 4 (cont'd)

	<u>Africa</u>	<u>The Americas</u>	<u>Asia/ Far East</u>	<u>Europe/ Middle East</u>	<u>Inter- regional</u>	<u>Total</u>
<u>CATEGORY V</u>						
Bringing one or several national technicians to the source of specialized knowledge abroad either to obtain the required assistance or to learn the solution to technical problems as practised in industrialized areas from first-hand observation.		-	-	-	2	3
<u>CATEGORY VI</u>						
Support in solving specific problems, such as the need for technical documentation, computations of data of a particularly complex nature, laboratory analysis of a type not available locally, design work of a specialized nature, etc.		1	3	1	-	5
<u>CATEGORY VII</u>						
Confidential consultations at a high policy level on matters relating either to specific projects or industrial development policies and advice on industrial project promotion problems.	45	15	21	13	2	96
<u>CATEGORY VIII</u>						
Trouble-shooting assignments to solve such technical problems as arise in connexion with the operation of plants and machinery, flow of materials and quality control.	28	16	21	5	-	70
Total	<u>146</u>	<u>59</u>	<u>74</u>	<u>39</u>	<u>5</u>	<u>323</u>

V Results of SIS-assisted projects

16. Members of the Board have often requested information on the results of the SIS-assisted projects. This, of course, is of considerable importance for assessing the programme as a whole. The Executive Director finds it difficult to report on all the results obtained in specific projects in view of the fact that many, by their nature, are confidential. There is, however, ample evidence available, including communications from Governments and from resident representatives, that testifies to the usefulness and the positive results obtained under this programme. The following are some typical examples:

CHILE - The recommendations of an SIS mission with regard to various sectors of the metalworking industry in Chile led to the establishment of an engineering plant with a total investment between the Government and foreign partners of over \$20 million.

GHANA - As a result of an SIS mission started in 1967, the jute bag factory in Kumasi, which - at the time the SIS assistance started - was practically at a standstill, increased its production to 10 million bags annually. Fibre bags are of particular importance to Ghana for the export of cocoa crops.

JORDAN - In response to an urgent request from the Government of Jordan, UNIDO provided the services of a steel-rolling expert to assist in the initial operation of a newly established mill. The expert surveyed the installations and equipment of the 50,000 ton mill and prepared detailed recommendations on ways to increase output and reduce costs of the finished products and to diversify the mill's output.

KENYA - In 1968, a UNIDO vegetable oil technologist assisted the Government of Kenya in evaluating a feasibility study on the establishment of a castor oil factory and in bringing the proposed plant to the investment stage.

MAURITIUS - In 1968, a UNIDO expert assisted the Government of Mauritius in the evaluation of a feasibility study and of a proposal for the establishment of a textile mill. On the basis of the expert's recommendation, the construction of the textile mill is scheduled to start in 1969.

NIGERIA - In the course of a short assignment in Nigeria, an SIS expert made a survey of the market for iron and steel products. The Government considered the survey to be very useful for finalizing the plans for the establishment of the iron and steel industry.

SINGAPORE - As a result of the assistance of UNIDO in 1968 in the development of locks and other building hardware, the Singapore International Chamber of Commerce Economic Bulletin reported that "sophisticated combination padlocks are being manufactured here for the first time in Asia". The Economic Development Board invested \$1.5 million in the factory which is producing the padlocks at competitive prices for the world market.

THAILAND - Following the assistance provided in 1967 by a UNIDO expert in organizing and developing the sugar industry, the Government incorporated many of the expert's recommendations in a Sugar Act. The expert's advice contributed to the establishment of a Sugar Institute and a Sugar Advisory Board within the Ministry of Industry.

TUNISIA - Assistance provided by UNIDO to a major olive oil plant under the SIS programme was instrumental in 1968 in eliminating losses by introducing technical improvements which made the plant more efficient. The expert also made recommendations for the establishment of a factory using by-products which would considerably increase the profit of the enterprise.

17. It becomes apparent from these facts that the speed with which assistance can be provided is decisive as regards the results. Short achievement-oriented missions carried out by individual experts or consulting firms show positive results in the case of industry, mainly due to their speed and versatility which enable the Governments to undertake appropriate follow-up action without delay.

VI Improvements in obtaining services of experts and engineering consultants for SIS projects

18. As already mentioned in paragraph 5 of this document, an unavoidable time lag exists between the receipt of the request and the actual start of field operations. Factors contributing to this time lag are the time necessary for the examination of the project from the substantive and programming point of view, possible queries to and from the interested Government, formulation of the projects submitted to UNDP for concurrence and the process of recruitment of experts or consulting firms to carry out the project, including the necessary approvals by the Government. In the past, recruitment and appointment accounted for most of the time lag, which sometimes could extend to several months. Considerable improvement was made during 1968 by transferring the recruitment and contracting facilities from New York to Vienna. This improvement is obvious in the number of experts engaged on the SIS programme in 1967 and 1968; as shown in table 6, there were 63 experts in the field in 1967, a number which increased to 125 in 1968. Of equal importance were the arrangements made with many national committees concerned with the recruitment of field personnel and the contacts with consulting firms in the field of industry. An illustration of the improvements already made is the programme on industrial repair and maintenance, where it was possible to start field work in eleven countries only weeks after the Governments had requested assistance (details of this programme are described in document ID/B/43, para. 80-88).

VII The SIS Programme within the framework of the operational activities of UNIDO

19. It may be useful to look at the role of SIS within the framework of the operational activities of UNIDO. Apart from SIS, these activities are carried out under three programmes: UNDP/SF, UNDP/TA and the Regular Programme. As reported in document ID/B/43, the value of projects approved under these programmes in 1967 and 1968 were:

	<u>1967</u>	<u>1968</u>
	(in US\$)	
UNDP/SF	3,144,936	3,561,382 ^{2/}
UNDP/TA	1,887,500	3,073,100 ^{3/}
Regular Programme	1,049,000	991,400

VIII Observations

20. The following observations may be made at this time with regard to the SIS programme:

- (a) The developing countries are increasingly expressing the need for assistance in industry, which represents the most dynamic element in their development;
- (b) The SIS programme was evolved in response to the needs of industry for additional assistance over and above the conventional programmes of technical assistance. With the conventional resources, these needs are not adequately satisfied for a variety of reasons:
 - (i) The resources in other programmes are heavily committed for continuation of projects started in past years in other fields.
 - (ii) Although the new continuous programming procedures for the UNDP/TA have brought this programme more in line with the SIS procedure as regards requests for assistance, the established system of country targets and the long-term basis of the UNDP/TA programme deprive it of the flexibility required for a wide range of projects related to industrial development.

^{2/} Annual expenditure target.

^{3/} 1968 figure includes carry-over from 1967 and contingency allocations.

21. The SIS programme understandably took time to build up momentum but is now reaching the stage where it is capable of providing the type of service expected, if resources continue to be made available to this end. It now represents a most vital and effective part of the programme of operational activities of UNIDO. It has not only supplemented the limited funds at the disposal of the Organization from other sources and provided a suitable vehicle for satisfying the complex needs of industry, but has in many instances provided the leverage for significant projects of longer term duration under the Technical Assistance and the Special Fund components of UNDP. The existence, side by side, of the conventional programmes and the SIS is essential to ensure a dynamic development of the activities of UNIDO and to make an impact on the process of industrialization in developing countries.

22. The need for additional resources and operational flexibility in the industrial field has been amply confirmed by the resolution 1081 F (XXXIX) of the Economic and Social Council and by the report of the Secretary-General, referred to in footnote 1. All parties engaged in the field of development continue to attest to the continuing needs of developing countries for increased efforts and funds for the promotion of industry. The Administrator of UNDP has repeatedly expressed the hope for increased activity in technical assistance devoted to industry. At the last United Nations Pledging Conference on the UNDP, there was also widespread recognition by member states of the need to devote a substantial share of development aid to industry. This recognition was further underscored by the contributions made at the United Nations Pledging Conference for the UNIDO last December, with one major contribution specifically made for the SIS programme.

23. Suggestions have been advanced recently for the purpose of finding ways and means to ensure the continued financing of the programme, including the development within the United Nations Development Programme of an SIS type of assistance devoted specifically to industry.

ANNEX

LIST OF SIS PROJECTS APPROVED FROM THE INCEPTION
OF THE PROGRAMME TO 31 DECEMBER 1968, BY
REGIONS AND COUNTRIES

	<u>Project number</u>	<u>Project title</u>	<u>Earmarkings US\$</u>	<u>Status of implementation</u>
