UNITED NATIONS DEVELOPMENT PROGRAMME

Project of the Government of the CENTRAL AFRICAN REPUBLIC

ORGANIZATION AND OPERATION OF ACRICULTURAL MACHINET AND EQUIPMENT REPAIR AND NAINTENANCE PACILITIES

PHASE I

PRE PACE

DRAFT PROJECT DOCUMENT CENTRAL ANTICAN REPUBLIC

This project document was drafted by UNIDO as a fellow up of the "inal Report of UNIDO Expert Marius Habert (CAT-013-B(S1S). It also takes into consideration UNIDO's recent experience in other African countries in the field of agricultural repair and maintenance, particularly the introduction and use of equipment financed from UNIDO/OTT resources.

It also reflects attention to the future needs of agriculture as influenced by recent drought in the region.

1. DECKROOMD AND SUPPORTING INFORMATION

A. Justification for the Project

In its development plans, the Government has placed emphasis on agricultural and rural development. The need has therefore become evident for the development of the agricultural machinery and implements sector. A UNIDO expert visited the country during December and January 1971/72. He recommended that assistance be given in the organization and operation of maintenance and repair facilities for agricultural machinery and implements in the form of mobile workshops equipment and experts as the priority activity.

Nobile workshops and equipment for stationary repair centres are being requested under the UNIDO General Trust Fund as well as 18 m/m of expertise under the SIS programme. This would constitute the first phase of the programme.

The duties of the experts would be

- To acquaint themselves with the Government's present programme and plans for establishing facilities for maintenance and repair;
- To analyse the existing facilities available (Government operated workshops and facilities offered by dealers);
- To investigate the existing facilities for the manufacture of spare parts;
- To assist in formulating a programme for the effective utilisation of mobile workshop units and other stationary workshops:
- To assist in formulating and organizing integrated maintenance and repair facilities;
- To recommend to the Government and to UNIDO the future line of action to realise the above programme;
- To assist in the establishment of a suitable local inventory of spare parts and distribution thereof;

- To assist in either repairing or scrapping of all presently inused equipment for spare parts;
- To establish a continuing fellowship and training programme.

The Government has established regional central workshops at Km 22. Eumbari, Grimari and Boukoko. The Government has requested approximately \$ 100.000 value of equipment under UNIDO General Trust Fund Resources, for possible deliver in 1974/1975. Expatriate expertise will be required at that time to assist in the installation and rational use of the equipment. To ensure rational use of various equipment and continued expansion and integration of the repair/maintenance activities into the Governments averall agricultural implements development programme, it will be desirable to provide continuing expertise for several years.

Major repair activities encountered are in the area of welding, and often revising and strengthening implement parts to suit local conditions of operations. These represent traditional premanufacturing activities and should be reenforced in the Phase I programme with a strong training programme in the technical aspects of welding and welded designs, especially as applied to local manufacture of spare parts.

The Government owns at least 120 tractors, approximately 30 % are in disrepair and out of action. Strong consideration should be given to maximizing there usage through better management and perhaps consolidation, as well as improved maintenance systems. Reconditioning and returning these tractors to full time service would be worth at least \$ 50.000 to the economy. Another possibility is a pilot demonstration tractor hiring scheme in conjunction with the Regional Workshop at Km 22.

These activities lend themselves well to an integrated programme of agricultural and rural development and will help to provide the industrial infrastructure necessary for the introduction of intermediate technologies at the village level.

The Government has included as the number two priority of the Country Programme (Reserve) organisation of facilities for the repair and maintenance of agricultural equipment. The covering budget envisions expenditures of \$ 95,000 (UNDP) and \$ 574,000 and \$ 145,000,000 F CFA. In order to allow earlier implementation we propose to decrease UNDP inputs to \$ 58,000 in 1974/75 accompanied by 23,400,000 F CAF in 1974/75. The balance of approximately \$ 40,000 (IPF) and 125,000,000 F to be initiated in 1976/77 as phase II with suitable redirection of activities as indicated by evaluation of phase I.

A balanced programme will be assured by augmenting the project with funds under UNIDO/OTP for equipment and training.

The proposed programme is needed to allow the Regional Workshops to rationally install and utilize additional equipment and provide the expanded services required for a rational agricultural, rural devolopment programme.

Institutional framework

The project will be initially attached to the Ministry of Agriculture and Regional Agricultural Base Km 22 near Bangui. Km 22 has the primary responsibility for coordinating repair activities and represents the Ministry of Agriculture throughout the Central African Republic with regional offices and staff. Buildings to the extent of approximately 1.300 square meters are available for Phase I activities.

The comments on the supporting personnel and facilities by the expert indicate a requirement for extensive training. The staff appears adequate in number to supply the immediate project counterpart requirements.

Provisions for Government follow-up

Phase I is considered to be a premanufacturing activity leading directly into Phase II.

Integrated Mechanization, Production and Marketing of Agricultural Tools and Implements

Its purpose is:

- 1) To increase local self-reliance in design, production, marketing and maintenance of agricultural tools and implements;
- 2) To contribute to an increase in agricultural productivity and rural living standard through wide availability of more and better tools and implements on favorable terms. The primary function is that of planning for a broad based development and upgrading of rural technologies. Adequate, decentralised repair and maintenance facilities serve as a vital procursus to such planning and development, and the execution of the

programme will generate continuing requirements for repair and maintenance services.

Other related activities

UNDP/UNIDC assistance is being provided on a continuing basis to the Government. The project will ultimately result in the introduction of quantities of new more sophisticated machinery and equipment. This will generate future requirements for expanded service activities in repair and maintenance. Close co-operation is proposed to maintain adequate repair facilities.

11. OBJECTIVES OF THE PROJECT

This project is a service project supplementing the production research and development activities of Ministry of Agriculture.

Long-range objectives

The activities of the Agricultural Research and Development Centres are meant to stimulate the production and diversification of agriculture in the country. A major portion of these activities is machanisation. There is at present a large requirement for expanded and decentralized repair facilities. This requirement can be expected to expand rapidly in the wake of the related developments mentioned above. Mechanisation should be accompanied by a broad based development of small rural industries for processing, marketing and production of agricultural commodities. The manpower development aspects of this project are nearly identical to those required for the development of intermediate rural industrial technologies. It will therefore be advantageous to establish the service infrastructure well in advance of the intermediate industrial development.

Immediate objectives

- 1) To supervise the installation of machinery and equipment at the regional workshop at Base Km 22;
- 2) To assist in start up of two mobile workshops and organise the backlog of repair requirements for the areas serviced;
- 3) To assist in the planning of an extension programme in repair and preventive maintenance, including preparation and dissemination of general repair manuals;
- 4) To assist in establishing better systems for stocking and delivering replacement parts for existing machinery and equipment;
- 5) To assist in training in the fabrication and repair of simple parts using local resources, particularly the techniques of welded design and substitution;
- 6) Provide assistance in design procurement and assembly/
 fabrication of repair units suitable for all districts in
 a manner as to conserve foreign exchange;
- 7) Assist in establishing a continuing training programme to assure that the objectives are reached and that future objectives can be met with local personnel.

No investment potential is foreseen for the project.

III. WORK PLAN

A. Description of Project Activities

- 1. Installation of machinery and equipment at Base Em 22.
- 2. Organisation of a training programme (including fellowships);
- 3. Publication and dissemination of appropriate repair manuals;
- 4. Establishing repair parts inventories and depote;
- 5. Design and development of various repair workshop kits;

- 6. Procurement, assumbly and disbursal of kits;
- 7. Design and development of a mobile training unit for assistance in local manufacture of implements and requireparts as well as organization of repair.
- 8. Organizing a fellowship training programme in repair and maintenance.

B. Timing of Project Activities

The activities of this project are sith the exception of loss continuous nature. They are also supplemental activities to other projects and will need to be responsive to their times. It is advantageous to prepare the repair and maintenance infrastructure in advance of the other development activities.

Preparation of sites and buildings at Fanturi, Grimari and Boukoko will be initiated during phase I of the programme. The preparation will be scheduled for completion by the low rement according to the plans to be prepared during phase I. The turn t date for initiation is September 1, 1974. The delivery of initial equipment is expected to be completed by October 1, 1974, and project activities to commence in October 1974. The training of two counterparts abroad for three months each will be carried out in early 1975. A midterm UNIDO staff evaluation mission of two weeks will be carried out in 1975. Certain special activities will be organized in early 1976 by means of short term consultants. (An example might be a pilot tractor hiring station attached to Bambari, see Appendix I).

The project is divided into we phases. During Phase I equipment (probably supplied under UNIDO/IP) will be installed it. Base En 22, which is the best developed and located of the Ministry of Agriculture's Development Centers. A comprehensive prototype repair, maintenance and training programme will be organised around these facilities with local mobile extension work included. Early in Phase I, a comprehensive mobile base maintenance center mounted on two agricultural tractor drawn trailers will be assembled and fabricated.

The exampment and capabilities will be identical to the stationary snop at Base Km &c. As soon as practical, the comprehensive mobile unit will start an extension, repair and training circuit. This will be the Phise II programme. Also during Phise II, another stationary repair cent r will be set up, implicating the Phase I prototype. It will be stringgially located so is to serve as a second part depot in conjunction with Km &c. The motile inits will continue to serve the existing decentralized lovernment Centers and private enterprises as remained.

Phase III which would be aquiping additional of the existing centers and establishing new centers and expanding mechanisation afforts.

Associate experts and fellows trained during Phase I and II would then be immediately available for smooth transition into a suitable new programme.

C. Description of Japp inputs

i. Assignment of international staff

(a) Project Manager

The expert is expected to organize, supervise, coordinate and participate in the activities of Base Km 22 weekshop. He will establish close working centacts with the verious programmes in agreendantrial development. The particular duties include organisation and supervision of the rational utilisation of repair and maintenance equipment at all the centers and the organisation and guidance of the work of short term experts, consultants and assectate experts. The post requires practical emerience in management of small repair and or light manufacturing workshops. He must be able to train local counterparts and set up appropriate book keeping, inventory controls and other systems. He should be skilled in solding techniques as applied to repair or light normifacturing. The duration of his assignment is eighteen menths beginning in September 1974.

(b) Associate experts

The associate experts will be expected to understude the project manager and assist in all phases of his duties. The secciate experts should have a degree or equivalent in Engineering (Mechanical, Industrial or Agricultural) and an interest in the problems of agro-industrial manufacturing development.

2. Provisions of sub-contractual services

The sub-contract services will be used to initiate and organize new programs activities requiring specific expertise not otherwise available locally. For example preparation of repair and maintenance bulletins; initiation of a palet tractor hiring scheme. Three man-months of consultancy will be required.

Consultants may be "berrowed" or extended from other local UNIDO projects. Consultancy will be scheduled faring the project on an ad hoc basis.

3. Training Provisions

Eight fellowships will be provided for three months each for training abroad. Pending the availability of muitable training sources, the training will take place according to the schedule shows in the bar chart. The fellowship holders will be selected from the local staff of the Ministry of Agriculture. This will be supplemented with on the job training conducted by the project manager, associate experts and consultants.

4. UNDP provided supplies and equipment

<u>Item</u>	Cost US\$	Delivery I	ate
(a) Copying machine (with spare parts)	500	Sept. 19	74
(b) Calculating machine (electrical printing, with spare parts)	500	*	**
(c) Drafting equipment (including table files and initial supplies)	700	January	1975
(d) Small blue print machine (initial paper and supplies)	3 0 0	11	11
(e) Books and periodicals	1.500	11	Ħ
Total	3.500		

D. Description of Government inputs

1. Prerequisites not applicable

2. Assignment of national staff

Initial training will be provided in operation of the mobile workshops during Phase I. These counterparts will be continued into Phase II and augmented to a total twelve full time counterpart trainces. The fellows will be selected from this group on the basis of performance.

5. Government-provided building, supplies and equipment

- (a) The initial project will be accommodated in Km 22

 premises near Bangoni. Workshops of approximately

 600 square meters will be made available for installation

 of equipment and are as repair centers.
- (b) The two mobils workshops and equipment will be initially attached to Km 22 and later intograted into the Phase II programme.
- (c) The Government will loan, for the duration of the project, three suitable tractors for use in the development of secondary mobile repair/demonstration units.

- (d) The Government will commit 300,000 CA francs for local purchase or import of equipment and materials for assembling their prototype repair/demonstration mobile workshop trailers. It is estimated that the trailers to be used in conjunction with existing tractors could be assembled locally for approximately \$2,500 each. These would be functionally equivalent to the USSR truck mounted units in use but less a mensive and better suited to the repair requirements and terrain of the remote areas.
- (e) The Government will commit 190,000 CA francs in operating funds for the project to be used for the replacement of 1) perishable tools 2) repair parts 3) raw material supply 4) electricity water etc. 5) working capital and reserve fund. The above funds can be recovered through charges for services if desired by the Government.

IV. GERACIETACI OF A 1919 P. OFFICE

General responsibilities

The Jovernment, the UNDS and the Executing Agency shall jointly be responsible for the execution of the project and the realization of its objectives as described in Part II of this Project Document.

The Government shall provide to the project the national project personnel, training isoillities, land, buildings, equipment and other required services and familities. It will designate the Government Cooperating Agency named in the cover page of this incument, which will hereinafter be referred to the "Co-operating Agency" and which will be directly responsible for the implementation of the Government contribution to the project.

The INDP undertakes to complement and supplement the Government Participation and will provide through the Executing Agency the required expert services, training, equipment and other services within the funds available to the project.

Upon commencement of the project the American Agency may be requested to assume primary responsibility for project execution. However, that primary responsibility shall be exercised in consultation and in agreement with the Co-operating Agency. Arrangements to this effect shall be stipulated in the project Work Plan as well is for the transfer of this responsibility to the Government or to un entity designated by the Government during the execution of the project.

Part of the Government(s participation may take the form of a cash contribution to UNDP. In such cases, the Executing Agency will provide the related services and facilities and will account samually to the UNIP and to the Government for the expenditure incurred.

Participation of the Government

The Government shall provide to the project the services, equipment and facilities in the quantities and at the times specified in the Week Plan. Budgetary provision - either in kind or in cash - for the Gevernment's participation so specified shall be set forth in the Project Deage The Company of the co

Prior to completion of UNDF securities to the project, the Government, the UNDF and the Executive agency still consult to the disposition of all project equipment provided by the TNDF. Little to be a equipment shall normally be transferred to the Covernment, or to an entity commutes by the Government, when it is required for activities of the project or for activities following directly therefrom. The UNDF may, however, at its disposition, retain title to part or all of much equipment.

At an agreed time with the completion of UNDF wristance to the project, the Government and the UNDF, and if necessary the Executing Agency, shall review the activities continuing from or consequent upon the project with a view to evaluating its results.

Pacilities, privileges and immunities

INDP and Amounting Agency personnel

In accordance with the Agreement concluded by UMDP and the Government concerning the provision of assistance, the personnel of UNDF and other United Nations organisations associated with the project, shall be accorded facilities, privileges and immunities specified in the said Agreement.

Subcontractors and their personnel

The Executing Agency's contractors and their personnel (except Government nationals employed locally) shall:

- a) Be immune from legal process in respect of all acts performed by them in their official capacity in the execution of the project;
- b) Be immune from national service obligations;
- c) Be immine together with their spouses and relatives dependent on them from immigration restrictions;
- amounts of foreign currency for the purposes of the project or for personal use of such personnel, and of withdrawing any such amounts brought into the country, or, in accordance with the relevant fereign exchange regulations, such amounts as may be earned therein by such personnel in the execution of the project;
