The description and classification of countries and territories in this publication and the arrangement of the material do not imply the expression of any opinion whatsoever on the part of the Secretariat of the United Nations Industrial Development Organization concerning the legal status of any country, territory, city or area, or of its authorities, or concerning the delimitation of its frontiers or boundaries, or regarding its economic system or degree of development. The designation "country or area" covers countries, territories, cities and areas. The designation "region, country or area" extends the preceding one by including groupings of entities designated as "country or area". Designations such as "industrialized" and "developing" countries and "newly industrialized countries" are intended for statistical convenience and do not necessarily express a judgement about the stage reached by a particular country or area in the development process.

Explanatory notes

Unless otherwise indicated, "manufacturing" includes the industry groups listed under major division D of the *International Standard Industrial Classification of All Economic Activities* [Statistical Papers, Series M, No.4/Rev.3 (United Nations publication, Sales No. E.90.XVII.II)]. It should be noted, however, that several countries have not made a switchover from their national industrial classification schemes that are based on, or related to, Revision 2 of the International Standard Industrial Classification of All Economic Activities (ISIC) [Statistical Papers, Series M, No.4/Rev.2 (United Nations publication, Sales No. E.68.XVII.8)] to those based on, or related to, Revision 3 of ISIC. In these instances, "manufacturing" refers to table category 3 in that classification.

ISIC code numbers are accompanied by a descriptive title (for example in the case of Revision 3 of ISIC, ISIC 1520: "Manufacture of dairy products"). For considerations of space, however, the description is sometimes shortened (that is, ISIC 1520 may be described simply as "Dairy products"). For both Revisions 2 and 3 of ISIC, all 2-, 3- and 4-digit codes and their corresponding descriptive titles are listed in appendix II to the introduction.

In the presentation of several tables individual countries and areas are listed alphabetically, whenever appropriate, within two successive categories: industrialized countries and developing countries. Data relating to selected groups of countries are presented in part I. In addition to regional groupings, developing countries have been further classified into three income categories: developing countries with low income (less than \$1,000 per capita gross domestic product in 1995 at current prices), those with middle income (\$1,000-\$5,000) and those with high income (more than \$5,000). This group has also been arranged in four development categories: newly industrialized countries (NICs), second-generation NICs, least developed countries and other developing countries. NICs are defined as major exporters of manufactures among developing countries in the mid-1970s, with a share of manufactures in total merchandise exports exceeding 20 per cent. Second-generation NICs are developing countries with a high average annual growth rate (over 15 per cent during the period 1970-1985) and having manufactured exports exceeding \$500 million in value in 1985.

Countries and areas included in the groups are listed in appendix I to the introduction. Because of a lack of data, some countries could not be included in their respective groups in some tables.

Taking into account the large size of its economy, China is not included in the group classified according to income level or the group classified according to development level.

Hong Kong became the Hong Kong Special Administrative Region (SAR) of China on 1 July 1997. Macao became the Macao Special Administrative Region (SAR) of China on 20 December 1999. In the present publication, unless otherwise stated, data for China do not include data for Hong Kong SAR, for Macao SAR or for Taiwan Province of China, which are presented separately under China (Hong Kong SAR), China (Macao SAR) and China (Taiwan Province).

Regardless of the year/period referred to, the country group European Union (EU) is related to the group consisting of the 25 countries shown under that country group in appendix I to the introduction. The abbreviation 'EU-15' refers to the European Union of 15 member countries before its enlargement in May 2004 (Austria, Belgium, Denmark, Finland, France, Germany, Greece, Ireland, Italy, Luxembourg, the Netherlands, Portugal, Spain, Sweden, United Kingdom). The abbreviation 'EU-10' refers to the 10 new member countries that acceded to the European Union in May 2004 (the Czech Republic, Cyprus, Estonia, Hungary, Latvia, Lithuania, Malta, Poland, Slovakia and Slovenia).

In the current publication, the three member countries of EU that are developing countries, namely Cyprus, Malta and Slovenia, are included in the group of industrialized countries under EU.

In part I, references to dollars (\$) are to United States dollars. National currencies have been converted to dollar equivalents by using period average exchange rates as published in *International Financial Statistics* (International Monetary Fund publication) and other sources.

Data converted to dollars by using current exchange rates are liable to be strongly influenced by fluctuations in exchange rates. Annual variations of data converted in that manner may not reflect movements in the national data.

In part II, for all member countries of the European Monetary Union (EMU), national data are expressed in Euros. Data relating to years prior to entry into the EMU have been converted from the former national currency using the appropriate irrevocable conversion rate. The presentation facilitates comparisons within a country over time and ensures that the historical evolution (i.e. growth rates) is preserved. However, pre-EMU Euros are a notional unit and are not normally suitable to form area aggregates or to carry out cross-country comparisons.

Unless otherwise noted, average annual growth rates are calculated from the data available for each year of a given period (for example, 1999-2004), using a semi-log regression over time. Growth rates are expressed in percentages.

Periods set off by a hyphen (for instance, 1999-2004) include the beginning and end years.

Apparent arithmetical discrepancies, such as percentages that do not add up to precise totals, result from the rounding of basic data or figures known to different degrees of precision.

Three dots (...) indicate that data are not available or are not separately reported.

A dash (-) indicates that an amount is nil or negligible.

The letter "x" designates the item applicable to a country when several options exist.

To avoid ambiguity, the letters "I", "o" and "O" are not used to designate footnotes.

DATA AVAILABLE ON CD-ROM

UNIDO maintains several databases on industrial statistics, of which new sales versions are made available annually.

**UNIDO INDSTAT3
Industrial Statistics
Database at the 3-digit
level of ISIC (Revision 2)**

- Time series for more than 180 countries/areas compiled on eight items (number of establishments, total employment, female employment, wages and salaries paid to employees, output, value added, gross fixed capital formation and production indexes) starting 1963 onwards. The data are arranged at the 3-digit level of the ISIC (Revision 2) pertaining to the manufacturing sector, which comprises 28 manufacturing categories.
- All value data are originally stored in national currency values at current prices. The system allows for data conversion from national currency into current U.S. dollars.

**UNIDO INDSTAT4
Industrial Statistics
Database at the 4-digit
level of ISIC (Revision 2 and 3)**

- **INDSTAT4-Rev.3** contains time series data on seven selected data items (number of establishments, total employment, female employment, wages and salaries paid to employees, output, value added and gross fixed capital formation) starting 1990 onwards. The data are arranged at the 3- and 4-digit level of ISIC (Revision 3) pertaining to the manufacturing sector, which comprises 151 manufacturing categories.
- **INDSTAT4-Rev.2** is available to the user to supplement INDSTAT4-Rev.3. The data refer to the seven variables and period 1981 onwards and are arranged according to ISIC (Revision 2) at the 4-digit level, which comprises 81 manufacturing industries.
- All value data are originally stored in national currency values at current prices. The system allows for data conversion from national currency into current U.S. dollars.

**UNIDO IDSB
Industrial Demand-Supply
Balance Database at the 4-digit
level of ISIC (Revision 2 and 3)**

- Time series (starting in 1990) for more than 73 countries on output, imports, exports and apparent consumption (all in current US dollars) at the 4-digit level of ISIC (Revision 3), supplemented with a similar database in accordance with ISIC (Revision 2).

Further details on these three databases may be obtained from:

INTRODUCTION

This is the twelfth issue of UNIDO's annual publication, the *International Yearbook of Industrial Statistics*. The *Yearbook* succeeded the *Handbook of Industrial Statistics* which was published biennially by UNIDO up to 1992. At the same time, it replaced the United Nations' *Industrial Statistics Yearbook*, volume I (General Industrial Statistics), which was discontinued after its 1991 edition published in 1993. These changes were in accordance with the recommendations of the United Nations Statistical Commission at its twenty-seventh session, namely that UNIDO, in collaboration with the Organisation for Economic Co-operation and Development (OECD), assumes responsibility for the collection and dissemination of world-wide general industrial statistics, effective 1994. The present *Yearbook* pertains to the manufacturing sector only.

The main purpose of the *Yearbook* is to provide statistical indicators to facilitate international comparisons relating to the manufacturing sector. The data presented were compiled bearing in mind the requirements of international comparability and the standards for this work promulgated by the United Nations. Concepts and definitions are drawn from the *International Recommendations for Industrial Statistics* [Statistical Papers, Series M, No.48/Rev.1 (United Nations publication, Sales No.E.83.XVII.8)] and the classification by industry follows Revision 2 or Revision 3 of ISIC.

The present *Yearbook* consists of two parts. Part I deals with the manufacturing sector as a whole (section 1.1) and with its divisions/branches (section 1.2). Statistical indicators are presented in terms of percentage distributions, cross-country averages, ratios and real growth rates that facilitate international comparison among selected country groups and/or countries. In the present publication data for manufacturing divisions/branches are for the first time arranged according to Revision 3 of ISIC at the two- or three-digit level. Part II consists of a series of country/area-specific tables showing detailed data on selected basic statistics that were reported by national statistical offices. For some countries, data are still presented in accordance with Revision 2 of ISIC. However, most countries have made a switchover from their national industrial classifications compatible with Revision 2 to those compatible with Revision 3 of ISIC. Consequently, data for those countries are presented in accordance with Revision 3 of ISIC.

Sources and methods

In section 1.1 of part I, manufacturing value added (MVA) was estimated in accordance with the national accounting concept, which represents the

net contribution of the manufacturing sector to gross domestic product (GDP). The data on MVA and GDP were obtained from various national and international sources including the World Bank, OECD, the Statistical Division of the United Nations Secretariat (UNSD), the International Monetary Fund and regional development banks. These sources were supplemented with estimates generated by UNIDO.

Due to revision of data, there might be differences between the data shown in the present edition of the *Yearbook* and those shown in previous editions. Figures with respect to population emanate from the 2002 revision of data compiled by the Population Division of the United Nations Secretariat.

The information in section 1.2 is drawn from the UNIDO Industrial Statistics Database, as well as data communicated to the United Nations by official national sources. With regard to the member countries of OECD, data were compiled by that organization. Information is solicited through a questionnaire issued jointly by the two organizations.

To facilitate the comparability of the data over time and across countries, UNIDO has supplemented originally reported data with information obtained from various other sources. The latter include: industrial censuses, statistics supplied by national and international organizations, unpublished data collected in the field by UNIDO as well as estimates made by the UNIDO secretariat.¹

The indicators presented in tables 1.5 to 1.9 of section 1.2 were derived from estimates of value added at constant 1995 prices. For each country and industrial division, these value-added estimates were generated by applying production indexes to the 1995 value-added base weights, which in turn were generated by UNIDO from various national and international sources.

Except for index numbers of industrial production, the information for the countries and areas other than the OECD member countries, presented in part II, were compiled from (i) the 2003 edition of the UNIDO General Industrial Statistics Questionnaire completed by national statistical offices and (ii) relevant publications issued by

¹ UNIDO's procedures for estimation are described in "*UNIDO Industrial Statistics Database — Methodological Notes*" (IRD/R.11).

national statistical offices. Information referring to OECD member countries is based on data compiled by OECD via questionnaire and incorporated in OECD's Information System on Industrial Statistics as well as in the UNIDO database. With respect to production indexes, data were supplied by UNSD that compiles these data regularly from national sources through the quarterly United Nations Index of Industrial Production Questionnaire.

In section 1.2 of part I and in part II, the measures generally used are census output and census value added. Thus, the costs of non-industrial services are included in value added, whereas the receipts for these services are excluded from output. For a quick reference, appendix III to this introduction provides notes on certain aspects of the data used, and it is recommended that the reader consult them when using the *Yearbook*. A detailed version appears in the individual country notes in part II, which also covers deviations from the standards applied. In general, these notes are also applicable to the estimates that supplement the officially reported data.

The co-operation of national statistical offices, OECD and UNSD in the provision of the information that is the basis of the current publication is gratefully acknowledged.

PART I. SUMMARY TABLES

Section 1.1: The manufacturing sector

Section 1.1 comprises tables 1.1 to 1.4. Table 1.1 shows the distribution of world MVA for various regions and groups of countries at constant 1995 prices as well as at current prices.

The reader should be aware that due to variation in official exchange rates the world distribution may change considerably depending on the choice of the base year.

To maintain comparability over time, composition of each group of countries was kept the same throughout the period. In this connection, EU refers to the 25 countries that are listed in appendix I to this introduction. However, due to data limitations, several developing countries listed in appendix I are not included.

Table 1.2 shows the shares of selected groups of developing countries in MVA and in population of all developing countries. For the definitions of the income categories, see "Explanatory notes".

Table 1.3 shows real growth rates and index numbers (1995=100) of total and per-capita MVA as well as values of per-capita MVA for the latest year (2004) for individual countries and areas and for selected country groups. Data referring to

country groups were based on cross-country aggregates of MVA in constant 1995 US dollars.

Table 1.4 shows the percentage shares of MVA in GDP estimated at both constant 1995 prices and current prices. The data are presented by individual countries and areas as well as by selected country groups. With respect to the selected country groups, common country samples were taken for both indicators and for all reference years.

Section 1.2: The manufacturing divisions/branches

Section 1.2 comprises tables 1.5 to 1.11. It focuses on the divisions/branches of the manufacturing sector. The ISIC (Revision 3) definition of manufacturing consists of 23 divisions reported in accordance with a two-digit code and 61 branches reported in accordance with a three-digit code.

In tables 1.5 to 1.9 (i) Recycling (ISIC 37) had to be excluded from the presentation due to data limitations and (ii) owing to lack of relevant data, China is not included (other than its Hong Kong SAR and Taiwan province).

Table 1.5 shows the world distribution of the respective value added of selected divisions among selected country groups. To derive world totals for the latest years, a number of estimates at the country level, especially for many developing countries, were generated.

Table 1.6 shows the shares of developing regions and the least developed countries in the value added of all developing countries in selected divisions. Due to lack of sufficient data, estimates at the country level had to be generated to enable regional aggregation.

Table 1.7 shows the world's leading producers in various industrial divisions as well as the leading developing countries and areas in terms of value added. As in the case of table 1.5, data for 2004 include many estimates generated for individual countries.

Table 1.8 shows the shares of individual divisions in total MVA by country grouping.

Table 1.9 shows real growth rates of value added of individual divisions, calculated for selected country groups. The reference periods are 1994-1999 and 1999-2004.

Table 1.10 presents the share of female employees in total employment in individual divisions. For some countries, employment refers to number of persons engaged instead of number of employees (see appendix III of the present introduction). Only a limited number of countries and areas have reported data on female employment at the division level.

Table 1.11 shows, for individual countries and areas, basic indicators that are characteristic of the manufacturing branches. Costs of input materials and utilities are calculated as output minus value added. Costs of labour refer to wages and salaries of employees only. Operating surplus is calculated as value added minus wages and salaries paid to employees.

Information concerning the following branches is excluded from table 1.11: Dressing & dyeing of fur; processing of fur (ISIC 1820); Reproduction of recorded media (ISIC 2230); Coke oven products (ISIC 2310); Refined petroleum products (ISIC 2320); Processing of nuclear fuel (ISIC 2330); Man-made fibres (ISIC 2430); Watches and clocks (ISIC 3330); Railway/tramway locomotives & rolling stock (ISIC 3520); Aircraft and spacecraft (ISIC 3530); Transport equipment n.e.c. (ISIC 359); Recycling of metal waste and scrap (ISIC 3710); Recycling of non-metal waste and scrap (ISIC 3720).

PART II. COUNTRY TABLES

Part II comprises country/area-specific tables presenting the following selected industrial statistics: number of establishments, number of employees (or, if not reported, number of persons engaged), wages and salaries paid to employees, output, value added, gross fixed capital formation and index numbers of industrial production. All value data are presented in current national currencies. The data on these items (except gross fixed capital formation and index numbers of industrial production) relate to the last four years for which data were reported. Gross fixed capital formation refers to the last two years for which data were reported. Index numbers of industrial production refer to the period 1992-2003. When presented in accordance with Revision 2 of ISIC, production indexes for total manufacturing were derived as weighted averages across branches employing 1995 value-added base weights which were estimated by UNIDO.

Coverage of countries/areas

The countries/areas that are presented in part II are those which reported data during the current round of the UNIDO annual compilation programme of global industrial statistics. Those countries/areas, which reported data only in previous rounds of the UNIDO compilation programme, are not included in the present *Yearbook* but were included in previous editions. At the beginning of part II, those countries/areas are listed together with a reference to the respective editions of the *Yearbook* in which their latest data were presented.

Industrial classification

The classification of industrial activity set out in the tables follows either Revision 2 or Revision 3

of ISIC, at the two-, three- and four-digit levels of ISIC depending on the individual country's data reporting scheme. With regard to production indexes, data are arranged either in accordance with the 3-digit level of Revision 2 of ISIC or in accordance with the 2-digit level of Revision 3 of ISIC. Where information was not provided in this form, the estimates are shown in the most applicable ISIC category. Aggregates for total manufacturing are included.

It should be noted that in several cases a figure presented for a 3-digit group does not agree with the sum of data given for the corresponding 4-digit categories. As far as possible, UNIDO resolved these discrepancies with the help of available supplementary information.

Reference unit

For most countries and areas represented, the data shown relate to the activity of "establishments" in the specified industries rather than any other type of industrial unit. In a few cases, however, the concepts of "kind-of-activity unit", "local unit" or "enterprise" are found. An "establishment" is ideally a unit that engages, under a single ownership or control, in one, or predominantly one, kind of activity at a single location; for example, workshop or factory. A "kind-of-activity unit" differs from the establishment in that there is no restriction with respect to the geographical area in which a given kind of activity is carried out by a single legal entity. A "local unit", on the other hand, comprises all activities carried out under a single ownership or control at a single location and differs from the establishment-type of unit in that there is no restriction on the range of these activities. An "enterprise" is a legal entity possessing the right to conduct business in its own name; for example, to enter into contracts, own property, incur liability for debts, and establish bank accounts. Specific information on the character of the units covered in the tables for each country is set out in the corresponding country note.

Reference period

The statistics in the tables relate, in general, to the calendar year. It should be noted, however, that in many cases where the basic reference period of the industrial inquiry is the calendar year, returns covering proximate fiscal years may be accepted for reporting purposes and the data for these years incorporated in the calendar-year aggregates without adjustment. In a few countries, fiscal years normally used for public accounting purposes have been adopted as the basic reference periods. In the case of fiscal-year coverage, the year indicated in the tables refers to the calendar year in which the major part of the fiscal year falls. In the case of fiscal years from 1 July to 30 June, the year referred to is normally the one in which the fiscal year ends.

Concepts and definitions of the items

The United Nations standards that have been applied in preparing the tables are set out below. All values are in national currency units and are at current prices unless otherwise indicated. For countries other than the OECD member countries, deviations from these concepts and definitions are described in the respective country notes. The country notes referring to OECD member countries are based on information presented in part B, section II ("Sources and classifications") of OECD's annual publication "Structural Statistics for Industry and Services".

(1) Number of persons engaged and number of employees

The number of persons engaged is defined as the total number of persons who worked in or for the establishment during the reference year. However, home workers are excluded. The concept covers working proprietors, active business partners and unpaid family workers as well as employees. The figures reported refer normally to the average number of persons engaged during the reference year, obtained as the sum of the "average number of employees" during the year and the total number of other persons engaged measured for a single period of the year. The category "employees" is intended to include all persons engaged other than working proprietors, active business partners and unpaid family workers. In this publication, preference has been given, whenever possible, to employees over persons engaged.

(2) Wages and salaries

Estimates of wages and salaries include all payments in cash or in kind made to "employees" during the reference year in relation to work done for the establishment. Payments include: (a) direct wages and salaries; (b) remuneration for time not worked; (c) bonuses and gratuities; (d) housing allowances and family allowances paid directly by the employer; and (e) payments in kind.

Compensation of employees is equivalent to wages and salaries plus employers' contributions on behalf of their employees paid to social security, pension and insurance schemes, as well as the benefits received by employees under these schemes and severance and termination pay.

(3) Output

The measure of output normally used in the tables is the census concept that covers only activities of an industrial nature. The value of census output in the case of estimates compiled on a production basis comprises: (a) the value of all products of the establishment; (b) the net change between the beginning and the end of the reference period in the value of work in progress and stocks of goods to be shipped in the same condition as received; (c) the value of industrial work done or industrial services rendered to others; (d) the value of goods shipped

in the same condition as received less the amount paid for these goods; and (e) the value of fixed assets produced during the period by the unit for its own use. In the case of estimates compiled on a shipment basis, the net change in the value of stocks of finished goods between the beginning and the end of the reference period is also included.

Gross output is equivalent to census output plus the revenue from activities of a non-industrial nature. Valuation may be in factor values, excluding all indirect taxes falling on production and including all current subsidies received in support of production activity, or in producers' prices, including all indirect taxes and excluding all subsidies.

(4) Value added

The measure of value added normally used in the tables is the census concept, which is defined as the value of census output less the value of census input. Items covered in the latter include: (a) value of materials and supplies for production (including cost of all fuel and purchased electricity); and (b) cost of industrial services received (mainly payments for contract and commission work and repair and maintenance work). If input estimates are compiled on a "received" rather than on a "consumed" basis, the result is adjusted for the net change between the beginning and the end of the period in the value of stocks of materials, fuel and other supplies.

Total value added is the national accounting concept. It is ideally represented by the contribution of the establishments in each branch of activity to the gross domestic product. For the measure of total value added, the cost of non-industrial services is deducted and the receipts for non-industrial services are added to census value added. The estimates, whether in terms of census value added or total value added, are gross of depreciation and other provisions for capital consumption, unless otherwise stated. The valuation may be in factor costs or in producers' prices, depending on the treatment of indirect taxes and subsidies.

(5) Gross fixed capital formation

Estimates refer to the value of purchases and own-account construction of fixed assets during the reference year less the value of corresponding sales. The fixed assets covered are those (whether new or used) with a productive life of one year or more. These assets, which are intended for the use of the establishment, include fixed assets made by the establishment's own labour force for its own use. Major additions, alterations and improvements to existing assets that extend their normal economic life or raise their productivity are also included.

New fixed assets include all those that have not been previously used in the country. Thus, newly

imported fixed assets are considered new whether or not used before they were imported. Used fixed assets include all those that have been previously used within the country. Transactions in fixed assets include: (a) land; (b) buildings, other construction and land improvements; (c) transport equipment; and (d) machinery and other equipment.

Assets acquired from others are valued at purchasers' prices, which cover all costs directly connected with the acquisition and installation of the items for use. In principle, assets produced on own account are also valued in this manner. However, it may frequently be necessary to value such own-account production at explicit cost, including any imputations that may be required in respect of the employed own-account labour.

Assets produced by one establishment of a multi-establishment enterprise for the use of another establishment of the same enterprise should be valued by the receiving establishment as though purchased from outside the enterprise. Sales of assets should be valued at the actual amounts realized rather than at book values.

(6) Index numbers of industrial production

The indexes in the tables are compiled from national indexes that are calculated by use of the Laspeyres formula. The comparison base year is 1995. However, if different base years are used in any countries, the national indexes are converted to the comparison base year.

2912	Manufacture of pumps, compressors, taps and valves
2913	Manufacture of bearings, gears, gearing and driving elements
2914	Manufacture of ovens, furnaces and furnace burners
2915	Manufacture of lifting and handling equipment
2919	Manufacture of other general purpose machinery

ISIC REVISION 3 (continued)

ISIC	Description	
292	Manufacture of special purpose machinery	
2921	Manufacture of agricultural and forestry machinery	
2922	Manufacture of machine-tools	
2923	Manufacture of machinery for metallurgy	
2924	Manufacture of machinery for mining, quarrying and construction	
2925	Manufacture of machinery for food, beverage and tobacco processing	
2926	Manufacture of machinery for textile, apparel and leather production	
2927	Manufacture of weapons and ammunition	
2929	Manufacture of other special purpose machinery	
293	2930	Manufacture of domestic appliances n.e.c.
DIVISION 30		MANUFACTURE OF OFFICE, ACCOUNTING AND COMPUTING MACHINERY
300	3000	Manufacture of office, accounting and computing machinery
DIVISION 31		MANUFACTURE OF ELECTRICAL MACHINERY AND APPARATUS N.E.C.
311	3110	Manufacture of electric motors, generators and transformers
312	3120	Manufacture of electricity distribution and control apparatus
313	3130	Manufacture of insulated wire and cable
314	3140	Manufacture of accumulators, primary cells and primary batteries
315	3150	Manufacture of electric lamps and lighting equipment
319	3190	Manufacture of other electrical equipment n.e.c.
DIVISION 32		MANUFACTURE OF RADIO, TELEVISION AND COMMUNICATION EQUIPMENT AND APPARATUS
321	3210	Manufacture of electronic valves and tubes and other electronic components
322	3220	Manufacture of television and radio transmitters and apparatus for line telephony and line telegraphy
323	3230	Manufacture of television and radio receivers, sound or video recording or reproducing apparatus, and associated goods
DIVISION 33		MANUFACTURE OF MEDICAL, PRECISION AND OPTICAL INSTRUMENTS, WATCHES AND CLOCKS
331		Manufacture of medical appliances and instruments and appliances for measuring, checking, testing, navigating and other purposes, except optical instruments
3311		Manufacture of medical and surgical equipment and orthopaedic appliances
3312		Manufacture of instruments and appliances for measuring, checking, testing, navigating and other purposes, except industrial process control equipment
3313		Manufacture of industrial process control equipment

ISIC REVISION 3 (continued)

ISIC	Description
332 3320	Manufacture of optical instruments and photographic equipment
333 3330	Manufacture of watches and clocks
DIVISION 34	MANUFACTURE OF MOTOR VEHICLES, TRAILERS AND SEMI-TRAILERS
341 3410	Manufacture of motor vehicles
342 3420	Manufacture of bodies (coachwork) for motor vehicles; manufacture of trailers and semi-trailers
343 3430	Manufacture of parts and accessories for motor vehicles and their engines
DIVISION 35	MANUFACTURE OF OTHER TRANSPORT EQUIPMENT
351	Building and repairing of ships and boats
3511	Building and repairing of ships
3512	Building and repairing of pleasure and sporting boats
352 3520	Manufacture of railway and tramway locomotives and rolling stock
353 3530	Manufacture of aircraft and spacecraft
359	Manufacture of transport equipment n.e.c.
3591	Manufacture of motorcycles
3592	Manufacture of bicycles and invalid carriages
3599	Manufacture of other transport equipment n.e.c.
DIVISION 36	MANUFACTURE OF FURNITURE; MANUFACTURING N.E.C.
361 3610	Manufacture of furniture
369	Manufacturing n.e.c.
3691	Manufacture of jewellery and related articles
3692	Manufacture of musical instruments
3693	Manufacture of sports goods
3694	Manufacture of games and toys
3699	Other manufacturing n.e.c.
DIVISION 37	RECYCLING
371 3710	Recycling of metal waste and scrap

<p>Supplier of information: Australian Bureau of Statistics, Canberra. Industrial statistics for the OECD countries are compiled by the OECD secretariat, which supplies them to UNIDO.</p> <p>Basic source of data: Annual manufacturing survey.</p> <p>Major deviations from ISIC (Revision 3): Data have been compiled on the basis of the Australian and New Zealand Standard Industrial Classification (ANZSIC). This classification is not fully compatible to the ISIC (Revision 3), especially at a high level of disaggregation.</p> <p>Reference period (if not calendar year): Fiscal year ending 30 June of the year indicated.</p> <p>Scope: All establishments with paid employees.</p> <p>Method of enumeration: Questionnaires are distributed by mail.</p> <p>Adjusted for non-response: Yes.</p>	<p>Concepts and definitions of variables: <u>Number of persons engaged</u> is not converted to full-time equivalent. <u>Wages and salaries</u> includes salaries and fees of directors and drawings from profits by working proprietors and partners but excludes payments to consultants, contractors and persons paid solely by commission. Payments and benefits in kind are excluded. <u>Output</u> is measured as the sum of the value of sales of goods or services produced by the unit, receipts for industrial work done or industrial services rendered to others, resales and net change in stocks of goods purchased for resale in the same condition as received, net change in stocks of finished goods and in stocks of work in progress manufactured by the unit, value of electricity sold and value of capital assets manufactured for own use. Advertising incomes are also included. Valuation is made at basic prices. <u>Value added</u> is output less value of industrial materials and services for processing, value of fuels and purchased electricity, cost of industrial services received, and payments for contract and commission work. Valuation is made at basic prices.</p> <p>Related national publications: Manufacturing Industry, published by the Australian Bureau of Statistics, Canberra.</p>

<p>Supplier of information: Central Statistical Organisation, Ministry of Statistics and Programme Implementation, New Delhi.</p> <p>Basic source of data: Annual survey of industries.</p> <p>Major deviations from ISIC (Revision 3): Data were originally classified according to the National Industry Classification (1998) which is fully compatible with ISIC (Revision 3).</p> <p>Reference period (if not calendar year): From 1 April of the year indicated to 31 March of the following year. However, individual factory returns for an accounting year, ending on any given day during the reference period, are accepted.</p> <p>Scope: Factories using power and employing 10 or more workers on any day of the reference period and all factories employing 20 or more workers.</p> <p>Method of enumeration: Factories employing 100 or more workers are completely enumerated. For factories with less than 100 workers, stratified uni-stage sampling is used. The survey is carried out by mail and field contacts.</p> <p>Adjusted for non-response: Yes.</p>	<p>Concepts and definitions of variables: <u>Number of persons engaged</u> includes unpaid members of the co-operative societies. <u>Wages and salaries</u> is compensation of employees. <u>Output</u> includes revenues from non-industrial activities.</p> <p>Related national publications: Annual Survey of Industries, published by the Central Statistical Organisation, Ministry of Statistics and Programme Implementation, New Delhi.</p>

<p>Supplier of information: Badan Pusat Statistik (BPS), Statistics Indonesia, Jakarta.</p> <p>Basic source of data: Annual industrial survey.</p> <p>Major deviations from ISIC (Revision 3): None reported.</p> <p>Reference period (if not calendar year):</p> <p>Scope: Large establishments (with 100 or more persons engaged) and medium scale establishments (with 20-99 persons engaged).</p> <p>Method of enumeration: Establishments are completely enumerated. For provinces where establishments are concentrated, the inquiry is carried out by field enumerators through direct interviews, elsewhere it is carried out by mail.</p> <p>Adjusted for non-response: Not reported.</p>	<p>Concepts and definitions of variables: <u>Wages and salaries</u> is compensation of employees. <u>Output</u> is gross output. Value added is total value added. Gross fixed capital formation represents the value of acquisitions of new and used fixed assets; sales are not taken into account.</p> <p>Related national publications: Industrial Statistics (Survey of Manufacturing Industries) Volumes I and II (annual), published by the BPS, Jakarta.</p>

<p>Source of information: Ministry of Economy, Trade and Industry (METI), Tokyo. Industrial statistics for the OECD countries are compiled by the OECD secretariat, which supplies them to UNIDO.</p> <p>Basic source of data: Annual census of manufacturers.</p> <p>Major deviations from ISIC (Revision 3): All data have been converted from the Japanese Standard Industrial Classification to ISIC (Revision 3).</p> <p>Reference period (if not calendar year):</p> <p>Scope: All establishments classified under manufacturing, except those belonging to the government and public service corporations. Surveys cover all such establishments only in years where the last digit is 0, 3, 5 or 8. In all other years, the survey is limited to those establishments with four or more employees. Data on investment cover establishments with 30 or more persons engaged.</p> <p>Method of enumeration: Not reported.</p> <p>Adjusted for non-response: Not reported.</p>	<p>Concepts and definitions of variables: <u>Number of employees</u> refers to regular employees including temporary workers employed for a definite period of more than 30 days, temporary workers employed for 18 days or more in November and in December, directors and family workers who work full time and are paid monthly. <u>Wages and salaries</u> relates to total cash payments, including basic wages, bonuses and other premiums, allowances and employees' retirement and termination allowances. <u>Output</u> represents the value of shipments of finished goods, adjusted for changes in stocks of finished goods and work in progress. The value of goods shipped in the same condition as received is excluded. <u>Value added</u> is output less the value of raw materials, fuels and electricity consumed, the cost of contract and commission work done by others, value of excise taxes and depreciation. <u>Gross fixed capital formation</u> is defined as the value of purchases of fixed assets, including own account construction, less the value of sales. Fixed assets covered are those with a productive life of more than one year and include repairs to existing assets, new assets whether not yet in use, unused, or previously used abroad, and used assets. Valuation is at full cost incurred, including delivery price, cost of installation and fees and taxes. For own-produced assets, the cost of work put in progress covers labour costs, materials and supplies and includes an allocation for overheads. The amount realized is taken for sales of used assets.</p> <p>Related national publications: Census of Manufacturers, published by the Ministry of Economy, Trade and Industry (METI), Tokyo.</p>

<p>Supplier of information: Department of Statistics, Putrajaya.</p> <p>Basic source of data: Census, annual survey.</p> <p>Major deviations from ISIC (Revision 3): The data presented in ISIC (Revision 3) were originally classified according to the Malaysia Standard Industrial Classification 2000.</p> <p>Reference period (if not calendar year):</p> <p>Scope: All establishments.</p> <p>Method of enumeration: Establishments with 30 or more employees are completely enumerated. For establishments with less than 30 employees data refer to overall estimates of the manufacturing sector based on a stratified sampling technique. The annual survey is conducted both by mail and through field contacts.</p> <p>Adjusted for non-response: Yes.</p>	<p>Concepts and definitions of variables: <u>Wages and salaries</u> includes employers' contributions (in respect of their employees) paid to social security, pension and insurance schemes as well as the benefits received by employees under these schemes and severance and termination pay. <u>Output and value added</u> are at purchaser's prices.</p> <p>Related national publications: Census of Manufacturing Industries; Annual Survey of Manufacturing Industries, both published by the Department of Statistics, Putrajaya.</p>

ISIC Revision 3

Note

REPUBLIC OF KOREA

<p>Source of information: National Statistical Office, Taejon. Industrial statistics for the OECD countries are compiled by the OECD secretariat, which supplies them to UNIDO.</p> <p>Basic source of data: Mining and manufacturing survey.</p> <p>Major deviations from ISIC (Revision 3): Data are collected under the national classification system which is compatible with ISIC (Revision 3).</p> <p>Reference period (if not calendar year):</p> <p>Scope: Establishments with 5 or more employees.</p> <p>Method of enumeration: The inquiry is carried out for large establishments through questionnaires and for small establishments through personal interviews. The surveyors visit all units.</p> <p>Adjusted for non-response: Not reported.</p>	<p>Concepts and definitions of variables: Number of employees is not converted to full-time equivalent. Wages and salaries includes all money payment and payment in kind paid or supplied by the employer during the reference period to all employees counted on the payroll. Output is gross output measured as the total value of all goods produced and services rendered to others by the establishment during the year. Value added is gross output minus cost of production. Gross fixed capital formation is the value of fixed assets purchased or constructed by the unit's own labour force for its own use during the reference year. The value of corresponding sales is not subtracted from it. Transactions in fixed assets include land, buildings, other construction and land improvements, transport equipment, machinery and other equipment.</p> <p>Related national publications: Report on the Mining and Manufacturing Survey, published by the National Statistical Office, Taejon.</p>

Supplier of information:

The Bureau of the Census, Department of Commerce, Washington, D.C. Industrial statistics for the OECD countries are compiled by the OECD secretariat, which supplies them to UNIDO.

Basic source of data:

Annual survey of manufacturing.

Major deviations from ISIC (Revision 3):

Data presented in accordance with ISIC (Revision 3) were originally classified in the 1997 North American Industry Classification System (NAICS).

Reference period (if not calendar year):

Scope:

All manufacturing establishments with at least one employee.

Method of enumeration:

Data are collected by mail and other communication media.

Adjusted for non-response:

Yes.

Concepts and definitions of variables:

Number of employees refers to all full- and part-time employees on the payrolls of operating establishments. An average of four quarterly observations (taken on 12 March, May, August and November) is taken for production workers (operatives) and combined with the figure for all other employees that is taken on 12 March.

Wages and salaries covers gross earnings, including wages, salaries and employers' contributions to pension funds and social security schemes. Regular and overtime cash payments, bonuses and cost of living allowances are included, as are vacation and sick leave pay, taxes and social insurance contributions payable by employees and deducted by employers, payments in kind and allowances. Also included are payments for health insurance, life insurance, pension plans and stock purchase plans. Wages and salaries are based upon the remuneration minus supplemental labour costs.

Output is measured as deliveries in terms of shipments, fob, adjusted for change in inventory for work-in-process and finished goods. Goods shipped include goods produced in the establishments, those shipped in the same condition as received, and receipts for industrial work done on materials owned by others or industrial services rendered to others. The value of goods shipped is in producer prices. In industries where the product is typically delivered, the value of shipments is in delivered prices.

Value added is based on the census concept and is calculated as output less the cost of materials, fuels and other supplies, goods shipped in the same condition as received, contract and commission work done by others, and electricity purchased. Input estimates are on a consumed basis. Valuation is the same as for output.

Gross fixed capital formation relates to the value of new plant and equipment purchased and constructed by the unit's own labour force for its own use. Used plant and equipment purchases are excluded. Fixed assets are defined as those with a productive life of more than one year. The valuation of new fixed capital formation is at full cost and includes the value of additions, alterations, improvements and repairs to existing assets (if capitalized). Purchased new assets are at delivered prices and include the cost of installation but exclude fees and taxes.
