## TOBACCO SECTOR PLAN FOR CFC-11 PHASE-OUT IN CHINA

## **2005 IMPLEMENTATION REPORT**

#### Summary

This document describes the activities undertaken during the year 2005 to phase-out CFC-11 used by the tobacco industry in the process of expanding tobacco.

The Programme fully achieved its objectives phasing out 200 tons and keeping consumption lower than established

The Programme dismantled twelve CFC-11 eligible expansion lines. Another non-eligible CFC-11 expansion line was also forcibly dismantled under control of China's government and without any compensation from MLF funds. In 2005, total CFC-11 consumption was 128 tons, which is lower than the expected level of consumption established in the National Plan (300 tons)

The CFC-11 consumption quotas were issued for each enterprise in order to control CFC-11 maximum consumption.

#### A. Phase-out Objectives in Tobacco Sector in 2005

The CFC-11 Phase-out Program in China Tobacco Sector was approved by the Executive Committee of Montreal Protocol Multilateral Fund at its 30th meeting, which was held in March 29 to 31, 2000. Annual programme and disbursements subject to the achievement of the previous year targets are as follows:

Year	2001	2002	2003	2004	2005	2006	2007	Total
CFC-11 phased-out (tons)	90	120	180	200	200	150	150	1090

#### **B.** Annual Programme for 2005

#### Duration

Each Annual Programme covers 12 months and starts on January 1. The 2005 annual programme started on January 1, 2005 and was completed by December 31, 2005.

#### **Objectives of the Annual Programme for the Year 2005**

The first objective of the annual programme for the year 2005 is to phase-out a minimum of 200 tons of CFC-11 used by the Tobacco sector in China from 500 tons consumption level at the end of 2004. Overall consumption of CFC-11 till 31 December 2005 is less than 300 tons on a yearly basis.

The second objective is to prepare the necessary conditions for an early phase-out of 150 more tons at the end of 2006.

#### Funds received

The Government of China, requested, in accordance with the Tobacco Sector Plan of the Year 2005, the amount of US\$ 1.7 million, which has been allocated to compensate closure of existing CFC-11 lines. - \_\_\_\_\_

#### C. Activity Progress for 2005

#### C.1 Progress at Sector-level Activities

#### **C.1.1 Information and awareness**

Material and information on the harmful potential of ODS' on the ozone layer and the development of CFC-11 phase-out in tobacco sector was given to newspapers and magazines such as "Ozone Activities", "Tobacco Science and Technology", "Sino-foreign Tobacco" and "China Environment Daily" towards the superintendents of enterprises.

#### C.1.2 Issue of Quota Licensing System for year 2005

At the beginning of 2005, the CFC-11 consumption quota of each enterprise for the year 2005 was defined, in accordance with the total CFC-11 consumption quota for tobacco sector of the year 2005 and the actual production schedule of the enterprise. A CFC-11 Consumption Quota Licence was given to each enterprise with total amount of 300 tons, so the enterprise can only consume CFC-11 within the quota themselves. This ensures the total CFC-11 consumption of China tobacco sector in 2005 couldn't beyond 300 tons.

In order to monitor the quota implementation conditions timely, every enterprise reported their CFC-11 consumption monthly. At the same time, China's government checks the reported data strictly through auditing them by local tobacco administration and the government themselves.

Up to the end of December 2005, in accordance with the monthly statistics of CFC-11 consumption reported by the enterprises, the total actual consumption of CFC-11 was approximate 128 tons (see Table 2), which is lower than the target-300 tons.

#### C.1.3 CFC-11 Phased-out Mechanism

At the beginning of 2005, all qualifying tobacco enterprises were requested to express their interest to phase-out their 2005 CFC-11 quota through a public bidding system. However, in March 2005, none of the 17 remaining eligible enterprises expressed interest in bidding.

The reason is that the funds allocated for the dismantlement barely cover 10% of the new investment required and the remaining 17 enterprises for financial reasons, would prefer to wait until the end of 2007

In view of these facts, STMA cancelled the bidding and negotiate incentives and supply of expanded tobacco from other entreprises, in order to proceed with the dismantlmemt programme.Consequently, in April 2005, SEPA and STMA joint committee, selected the enterprises that have to dismantled their equipment this year. Criteria for selection were:

- Willness of the company to go ahead with the dismantlements
- Nearest facilities with spare capacity to supply expanded tobacco
- Financial strength of the enterprise to afford new investments

The committee was composed by:

Mr. Liu Yi (Senior officer of SEPA) Mr. Xiong Kang (Senior project officer of SEPA) Mr. Wang Yanting (Senior officer of STMA) Ms. Yu Mingfang (Senior project officer of STMA) Mr. Zhang Xiaogang (Project officer of STMA) Mr. Jiang Xingrong (Senior project officer of DIA) Ms. Qiao Yanzhao (Project officer of DIA)

The Committee awarded the compensation scheme to 9 enterpises which will dismantle 12 sets CFC-11 equipment. It was agreed that the equipment will immediately stop production and have to be dismantled before December 31, 2005. The entreprises are the following:

#### Other

One set of CFC-11 equipment of Mianyang Cigarette Factory was installed after July 25, 1995 and therefore is ineligible (Table 5). This equipment was dismantled forcibly under the monitoring of China's government without compensation from MLF Table4. #### **Phase-out Results**

A total of Thirteen equipments include twelve sets of eligible equipments from nine enterprises and one ineligible equipment have been dismantled in the year 2005 and the minutes, notar acts and video documents have been transferred to UNIDO which has supervised the whole process. The total consumption is less than 200 tons as required in the phaseout plan.

#### C.2 Progress at enterprise-level

#### C.2.1 Signing of the ODS phased-out contract

Phase-out contracts between SEPA and each of the nine enterprises were prepared in May and signed in November 2005. It is declared in the contract that: the companies accept the compensation price and incentives and agree to dismantle their selected CFC-11 tobacco expansion equipment in return for the funds. The contract specifies that SEPA and STMA will organize the work and proceedings to dismantle all these CFC-11 equipment.

#### C.2.2 Fund disbursed I

After signing Amendment 4 of the ODS phased-out contract between SEPA and the enterprises the implementing agency (UNIDO) made the first payment, 20% of US\$ 1.7 million, to SEPA's special account.

#### C.2.3 CFC-11 tobacco expansion equipment dismantlement reports

By the end of 2005, 12 sets of eligible equipment from nine enterprises and one set of ineligible equipments have been dismantled. For each dismantlement of CFC-11 tobacco expansion equipment, members of the Special Working Group for Tobacco Sector Plan, the relevant provincial Tobacco monopoly Administration, the local Environmental Protection Bureau as well as members of the local notary office was onsite for supervision.

All above-mentioned members have signed the *Certificate of Dismantling* CFC-11 Tobacco Expansion Equipment when the dismantlement work was finished.

The whole dismantlement process was videotaped and photographs being taken. The local notary office filed notary deed. The Special Working Group of Tobacco Sector Plan is keeping these videotapes and photos for reviewing by the implementing agency.

#### C.2.4 Fund disbursed II

After the interim report and dismantling contracts were received and approved by the implementing agency (UNIDO), made the second payment, 60% of US\$ 1.7 million, to SEPA's special account.

#### **C.3 Progress in Policies**

#### C.3.1 Quota System

In January 2005, STMA issued the quota for 2005 to the concerned enterprises, which were required to consume the CFC-11 within the quota.

C.4 Summary of on going Technical Assistance Activities from previous years(2003 and 2004)

### C4.1 Study on effect of different tobacco leaf material to the quality of non CFC-11 expanded tobacco

This study is presently in phase III and progressing, although more slowly than expected. According to the study plan, experiments were carried out in Longyan Cigarette Factory, Guangdong General Cigarette Factory and Qingdao Cigarette Factory.

#### 1. Selection of different raw materials

Tobacco leaves at different stalk position were collected as samples for expansion studies

Area	Stalk position and grade
Shandong province	B2L
Shandong province	C3F
Shandong province	X2L
Wenshan, Yunnan province	B3F
Chuxiong, Yunnan province	C3F
Dali,Yunnan province	X3F

#### 2. Experiments using different raw materials expanded with CFC-11

The experiments were carried in Guangdong General Cigarette Factory and the physical characteristics of different raw material before and after expanding were studied. Physical characteristics as filling power, elasticity, and broken resistance were also measured.

#### 3. Experiments using different raw materials expanded with CO2.

The following characteristics were studied

- The relation of the moisture content and the expanding tobacco quality
- The relation of the width of tobacco-cut and the expanding tobacco quality
- The relation of immersion time and the expanding tobacco quality
- The relation of time and the expanding tobacco quality
- The relation of the airflow temperature and the expanding tobacco quality
- The relation of steam flow and the expanding tobacco quality
- The relation of velocity of airflow and the expanding tobacco quality

It was found an optimized parameter combining the physical characteristics and sensorial quality of tobacco processed by different systems

#### 4. Experiments using different raw materials expanded with hot air drying

The following parameters were studied:

- The relation of the moisture content and the expanding tobacco quality
- The relation of cut tobacco temperature and the expanding tobacco quality
- The relation of air temperature and the expanding tobacco quality
- The relation of tobacco flow and the expanding tobacco quality
- The relation of airflow and the expanding tobacco quality
- The relation of steam flow and the expanding tobacco quality
- The relation of negative pressure and the expanding tobacco quality

In the study, the different expansion methods were compared with the CFC-11 expanded tobacco in terms of quality and sensory evaluation

The study of tobacco expanded with  $CO_2$  and the study of tobacco expanded by hot air drying were finished on the whole. Now, the main work is to analyze the experimental data and institute next optimization steps.

# C4.2 Study on how CO<sub>2</sub> expansion technique affects volatile chemical components of tobacco

The work was carried out according to the testing programmes defined in previous years. The study primarily intends to determine how the main constituents of tobacco, change when expanded under controlled conditions. The effects of carbon dioxide and CFC-11 expanding techniques are being compared. The data disposal and analysis will be received on the basis of experimental results.

According to the plan, Guangdong General Cigarette Factory, Qingdao Cigarette Factory and Longyan Cigarette Factory were invited to attend discussion meetings. Qingdao Cigarette Factory was appointed to supply samples, which were expanded by HXD and carbon dioxide. Longyan Cigarette Factory was appointed to supply non-expanded and carbon dioxide expanded samples. Guangdong General Cigarette Factory will also provide samples expanded by CFC-11 and take

care of analysis tests.

#### Main results

1. Effect of expanding technologies on variation of chemical ingredients in tobacco

The samples are derived from two main tobacco producing areas in Henan province. The top, middle, bottom part of tobacco leaves were selected and separately expanded with CFC-11, HXD and carbon dioxide under the same expanding conditions. Level of regular and specific components such as total sugar, total nitrogen, total volatile bases and important flavor constituents have been identified and analyzed. Thus the impact of expanding technologies on chemical constituents variation of different area and different part of tobacco can be compared.

Six types of tobacco leaves from two areas and the 18 types of expanded tobaccos have been analyzed up to date.

We are taking soluble sugars, chloride, potassium, total nitrogen, total volatile bases, starch, ammonia and pH as our benchmarks to supervise the tobacco quality. The methods are outlined in the table5.

Items	Taken methods
Soluble sugar	YC/T159-2002
Chloride	YC/T153-2002
Total nitrogen	YC/T153-2002
Potassium	JAOAC49,521(1996), draft has been formed
Starch	Developed by CNTQSTC, draft has been formed
PH	Developed by CNTQSTC, draft has been formed
Ammonia	Developed by CNTQSTC, draft has been formed
Total volatile bases	Developed by CNTQSTC, draft has been formed

Table5. The routine detection items and methods

Based on the preliminary analysis of detected data, we concluded that whatever the expanding techniques are, regular constituents in tobacco are all reduced to some level. But the levels of such different constituents under varied expanded techniques are not the same.

We have planned to use petroleum ether extracts to determine the gross of the flavor constituents, to use simultaneous distillation and extraction (SDE) method to detect neutral and acidic flavor constituents in non-expanded and expanded tobacco. The apparatus and materials needed have been on position now. Preparation for the detection has also been made.

2. Comparison of the affects of carbon dioxide and CFC-11 expanding techniques on chemical constituents

We used carbon dioxide and CFC-11 to expand the same type of samples. We adjusted the control parameters of carbon dioxide in the process and detected the corresponding constituents. Based on the data obtained so far, the effects of the two expanding methods and the variation of the conditions will be studied.

3. Data disposal and analysis

We are presently statistically analyzing the following data obtained:

- (1) Study the affects of carbon dioxide, HXD and expanding techniques on the chemical constituents of different areas and different parts of tobaccos.
- (2) Study the different effects of carbon dioxide and CFC-11 on the chemical constituents, and influence of different expanding conditions on them.

#### Notarial Deed

#### (2005) XM LJ ZI No. 03997

Applicant: Xiamen Cigarette Factory; Registration No. of Corporate Legal Person Business License (Deplicate): 3502001000030; Registered address: No.1, Xinyang Road, Xinyang Industrial Zone, Haicang; Legal representative: Wang Jianyong

Concerns: dismantling of CFC-11 tobacco expansion

The applicant of Xiamon Cigarette Factory filed an application on June 20<sup>th</sup>, 2005 for the on-site supervision and notarization of the dismantling of CFC-1) tobacco expansion.

Our investigation shows that the applicant is entitled to civil rights and possesses civil behavioral abilities and that the applicant is planning to remove and dismantle its CFC-11 tobacco expansion as cer the requirements by the State Tobacco Monopoly Bureau.

According to the "Interim Regulations of the People's Republic of China Concerning Notarization" and the "Rules on Notarization Procedures", the undersigned notary and the notary assistant Ms. Zheng Lina jointly carried out an on-site supervision of the applicant's removal and dismantling of CFC-H tobacco expansion in Golden Bridge Production Center of Xlamen Cigarcue Factory from June 22nd, 2005 to June 24th, 2005 under the witness of representatives from Tobacco Special Work Group of State Tobacco Monopoly Bureau, Fujian Tobacco Monopoly Bureau, China Tobacco Fujian Industrial Corp., Xiamen Tobacco Monopoly Bureau and Xiamen Environmental Protection Bureau. Ke Zhaoping was responsible for the photographing of the dismantling and Zhang Pingyang and Zhang Yushi were responsible for the videotaping thereof. Our on-site supervision shows that the CFC-11 tobacco expansion to be dismantled has a serial number of 6122610001 and mainly consists of impregnator, vaporizer, cold tank, hot tank and water chiller. The equipment has stopped production and was sealed for storage by China Tobacco Fujian Industrial Corp. and has been in a sound state ever since. After the checkup, the applicant's dismaniling operators formally started the dismantling according to the "Working Requirements on the Dismantling and Removal of CFC-11 Tobacco Expansion in the Tobacco Industry" under the witness of the notaries and supervisors. Gas cutting was firstly carried out to damage the impregnator, vaporizer, cold tank, hot tank and water chiller which were then dismantled and broken up. Finally the dismantled parts were transported to Xiamen Metal Scrap Recycling Co., Ltd for disposal. In witness thereof, the applicant and the representatives from Tobacco Special Work Group of State Tobacco Monopoly Bureau, Fujian Tobacco Monopoly Bureau, China Tobacco Fujian Industrial Corp., Xiamen Tobacco Monopoly Bureau and Xiamen Environmental Protection Bureau signed and stamped (see Appendix I) on the "Certificate of Dismanding CFC-11 Equipment" and the representative of Xiamen Metal Scrap Recycling Co., Ltd signed and stamped (see Appendix II) on the "Centificate of Dismantled Equipment Recovery" accordingly.

In consideration thereof, it is hereby certified that

- The dismantling is genuine, legal and valid; ---
- 2. The tobacco expansion with the serial number 6122610001 of the applicant has been dismantled and destroyed.
