DEVINO/82/002

INDIA

Mission Report

Propaged for the Government of the Republic of India by the United Nations Industrial Development Organisation acting as executing agency for the United Nation Development Programme.

Based on the work of I. Petrov Chief Cachnical Adviser

United Mations Industrial Development Organization Vienna

This report has not been eleared with the United Dations Industrial Development Organization which does not, therefore, necessarily share the views presented.

- 10. Project Proposal

2. ABSTRACT

The basic conclusions are as follows:

The Government Budget for 1985 is granted. The civil constructions are completed. National staff is positioned. The equipment received are in use.

Regular services are provided to local industries on design, testing & calibration, training engineers from local industries, design & production of specialised tools. The Project development is good and advance according to the Project Document.

Minor changes in the Project Document are necessary to reflect the request for additional international emperts assistance, training and equipment as suggested by the Tripart: Review Mission.

The following recommendations are proposed for kind consideration by the Government of India, UIDP, UNIDO and Mational Project Manager in order to facilitate the smooth project implementation:

- 1. Ministry of Industry, Ministry of Finance, UNDP and UNIDO to approve the Project Revision proposed by Tripartite Review Mission (Annexe 8).
- 2. UNIDO to reflect the corresponding changes in the Experts Job Descriptions (Annexe 4).
- The National Project Management to submit to the Government a candidate's form for training according to Annex 5.
- 4. UIDP and UNIDO to approve up-dated Work Plan (Annex 9).
- 5. Ministry of Industry to issue official request to UNIDO for approval of Project Document for the international Meeting on Small Scale Industry—Institute linkage with a special reference to Instrumentation.

3. IMPRODUCTION

3.1 Project Background

The development of the instrument industry in India was although appreciable during and after the second Five Year Flan, there were limitations especially in the case of small scale units in contributing a major share and meeting the country's ever increasing demand for more and more instrumentation. The technological constraints faced by most of these small scale units were relating to design, development and evaluation of new products as well as quality control of the existing products, Non-availability of vital test equipments and lack of suitably trained technical personnel were some of the major handicaps, by and large, experienced by the instrument industry. The situation was also aggravated by the non-existence of standard laboratories for testing, calibration and evaluation of process control instruments in particular.

IDEMI with its close association with the indigenous instrument industry for more than a decade of its existence, has been able to identify the areas which directly or indirectly affect the industry's development growth. It has been observed that one of the major handicaps responsible for insufficient growth of this industry in general is lack of certain specialised facilities for product evaluation and non-existence of authorised institutions capable of extending such facilities.

In order to establish facilities for design, testing, calibration and evaluation of electronic, process control and Low-cost instruments and domestic appliances the Government selected IDEMI as a Government counterpart executed Agency for this Project.

3.2 Official Arrangements

The assistance was requested in 1982, approved by UIDP May 2, 1982, by the Government June 7, 1982 and by UNIDO August 11, 1982. The project became operational in December 1982. IDDNI is reporting to the Ministry of Industry and is governed by a Governing Jouncil.

3.5 Contributions

According to the Project Document the total UNDF contribution is US \$ 1.020,000.

The Government contribution is

Rs. 5 271 370

5.4 Objectives of the Project

The objectives of the Project are outlined in the Project Document as follows:

A. Development objective

The development objective is to promote import substitution and exports of electrical, electronic and process control instruments and appliances manufactured by small scale industries.

B. Immediate Objectives

1. Establishment of facilities for:

a) 'evaluation of a wide range of electronic and pneumatic process control instruments being produced in the country for use in various indutrial applications.

b) undertaking reliability evaluation studies especially on new instrument products and to offer necessary feedback to the nanufacturers before the products are introduced in the market.

c) testing of electronic instruments for intrinsic safety

d) testing of materials, components and finished products for domestic appliances.

e) electroplating and painting for specified industries in small scale sector.

2. Development of standards for process instruments an allied items.

3. Strengthening of tool room facilities for undertaki research and development work on.

a) Domestic appliances and low-cost instruments
b) Substitution of scarce raw materials especially

) Substitution of scarce raw materials especially for domestic appliances.

4. To build up a codre of trainers for providing industrial training structured according to the needs of instrument industry.

5.5 CULTUES

- 1. Inboratories/workshop equipped to carry out testing and evaluation of a wide range of electronic, process control, demestic appliances and low-cost instruments by December 1983.
- 2. Compendia of standards developed for specified instruments and appliances by July 1983.
- 5. Documentation on Design, manufacture and maintenance of household electrical appliances and low-cost instruments by December 1985.
- 4. Standardised materials and components used for manufacture of low-cost instruments by December 1983.
- 5. Quality control standards for production of safe and efficient household electrical appliances by December 1983.
- 6. 13 DILI engineers trained abroad on various disciplines of instruments industry by March 1984.
- 7. Training facilities established for the industry personnel in areas of electronic and process control instruments, domestic electrical appliances and low-cost instruments by July 1983.

4. HAIN ACTIVITIES

The CTA arrived on his first mission at Bombay on 10.03.1983 (at Vienna 6.03.1983) and started his work in accordance with the Tob Description (Annex 1). Work Programme was prepared jointly with the National Project Manager (Annex 2).

4.1 LEETINGS

Visits to and meetings with various industries were organised to identify the field and scope of co-operation between these industries and IDLMI in the frame of the project as well as to identify sources for equipment purchase (Annexe 3).

Meeting with Mr. V.K. Dar, Addl. Secretary, Ministry of Industry was organized to discuss various subjects on the Project - Governments inputs in particular.

4.2 REPORTS

After one month on post a Freliminary Report was prepared with findings and recommendations. UNIDO approved the Report (UNIDOGRALLE to UNDF-New Delhi).

Project Work Plan was prepared with corresponding activities and milestones (as amen to the Preliminary Report). UNIDO approved the Work Flan (UNIDOGRANDE to UNDI-New Delhi).

Progress Report was prepared, covering six months period (December, 1982 - May, 1983), and was sent to UIDP, New Delhi.

Performance Project Ivaluation Report was drawn and sent to SIDFA - New Delhi for comments and endorsement, following the instructions in Ur. Butaev's letter dated 5 May, 1983.

Draft of Project Revision with corresponding updated draft of Project Work Plan was prepared for the Tripartite Review Meeting (29 May, 1983).

4.3 FINANCES

The Government contribution for the year 1983-84 is granted, including funds for personnel costs, civil construction works and equipment.

4.4. BUILDING

The re-orientation of the present facilities is completed including a large scale reconstruction works.

Continuous re-construction is under way to build up additional improvements and activity conveniences.

Government's funds for extra civil construction to raise one additional floor in Administrative Building are obtained. All necessary pre-requisites for starting civil construction are fulfilled in order to start these works by September, 1983 and to be completed in March 1984.

4.5 FROJECT TELESCITEL

20 senior staff members as well as 26 junior staff members are positioned (details are outlined in the Project Progress Report Form E-2). Advertisements have been released in various newspapers and applications have been received. Selection of the candidates is carried out continuously.

4.6 INTERNATIONAL STAFF

Prof. Ivan Petrov joined this project as Chief Technical Adviser in March 1983.

Appointment of a Tool Manufacture Expert viz. Mr. V.V. Tsotsknadze is being processed to the Government and UIDP, New Delhi.

After thorough discussions on Froject objectives and outputs, it is realized that the number, field, duration, duties and qualifications of the International Experts hasto be updated (Annex 4). This proposal was fully accepted by the Tripartite Deview Mission and the Empert duration is increased to 40 man-months. Additional funds are envisaged in the Project Revision.

4.7 TRAINING

Based on the proposal of the CTA and the National Project Manager the Tripartite Review Mission accepted and increased the training component in order to meet the request for more comprehensive training of national staff (Annex 5). The corresponding increase of the Budget's training components to 30½ man-months is envisaged by the Tripartite Review Mission.

The CTA did contact by letters many advanced companies in Europe, USA and Japan to look for opportunities for National Project Manager's study tour. Positive answers were received from UK, USSR, USA, Japan, Austria and Bulgaria. His nomination form is under preparation and Government's approval is expected by end of June. The other fellowships are planned for 1984/85.

4.8 EXTERIOR

Fill 51st of May, 1985 Purchase Orders are placed for US 0 520,000 and 60 items totalling US 200,000 are already received at IDEMI and are in use. Some discrepancies in the previous requisitions were cleared with Purchase & Contracts Services Section. Hew 18 Requisitions were prepared in the period of April/May 1985 covering expendable and non-expendable equipment. Detailed report about the equipment is outlined in the Project Progress Report - Form G.

Based on request for additional equipment, the Tripartite Review Mission accepted the Project Revision with an increase of equipment component by 71,600%.

5. MAIN OUTPUTS

The following laboratories and facilities are established and carry out regular services to local industries in the field of Instrumentation:

- Process Control Instruments
- Tool Design
- Tool Manufacture
- Design & Development
- Calibration & Testing
- Training of Engineers from local industries
- Economics & Statistics.

An impressive training programme is launched during 1983 to train more than 120 engineers from local industries in various fields and levels of Instrumentation.

Details for the Project outputs are given in Annex 6. Based on the services provided to industry in the frame of the Project for the first 6 months IDEMI is earning Rs. 900,000. The target for 1983 is 2 million Rupees (According the current rate 1 US 0 = 9.75 Rupees).

6. TRIPARTINE REVIEW MEETING

The Tripartite Review Heeting took place on 28th Hay, 1983. The Minutes of the Meeting are given in Annex 7. The main conclusions and recommendations of the meeting are as follows:

- 1. An increase of 0 217,000 in the UIDF inputs to cover the cost of additional 8 man-months in the Expert Component, 302 man-months in the training component and transfer for procurement of additional items of equipment.
- 2. The necessary Budget Revision to reflect the allocation of additional funds should be prepared and procured for approval of the Hinistry of Industry; Department of Economic Affairs and UDP.
- Based on the Revised Job Descriptions UNIDE should identify suitable candidates for the post of Experts to be assigned, to the Project in 1984 and submitted their nominations for consideration by the Government.
- 4. Completed nomination forms of candidates to be deputed for fellowships training in 1984 should be submitted by the Project authorities officially to the Linistry well in advance to enable UNIDO Head-quarters to make appropriate placement arrangements.

Following the recommendations of the Tripartite Review Meeting, the Project Management and the CTA prepared a Project Revision (Annex 8), which is submitted to the Ministry of Industry on 10 June 1985.

The corresponding Work Plan according to this Project Revision is prepared (Annex 9).

7. INTERNATIONAL MEETING ON SMALL SCALE INDUSTRY - RESEARCH INSTITUTE LINKAGE WITH SPECIAL REFERENCE TO INSTRUMENTION

In the light of very close relations established between IDEMI's UIDP Project and local industries a seminar is proposed in 1925 to acquaint representatives from selected developing countries with the proved experience of this Institute in the frame of the Project in its co-operation with the industries in India. A Project Proposal is prepared (Annex 10), Preliminary Aide-Memoire for the Project is attached. This Project Proposal will be discussed at the IDEMI Governing Council Meeting and submitted to the Government. The Government will issue official request to UNIDC for financing the Seminarfrom Regular Programme Fund.

6. CONCLUSIONS

The Government Dudget for 1985 is granted.

The civil constructions are completed.

Mational Staff is positioned.

The equipment received are in use.

Regular services are provided to local industries on design, testing & calibration, training engineers from local industries, design & production of specialised tools.

The Project development is good and advance according to the Project Document.

Minor changes in the Project Document are necessary to reflect the request for additional international expert assistance, training and equipment as suggested by the Tripartite Review Lission.

9. RECCIDIDATIONS

The following recommendations are proposed for kind consideration by the Government of India, MDP, UNIDO and National Project Manager in order to facilitate the smooth project implementation:

- 1. Hinistry of Industry, Hinistry of Finance, UIDP and ULIDO to approve the Project Revision proposed by Tripartite Review Hission (Annex 8).
- 2. UNIDO to reflect the corresponding changes in the Emperts Job Description (Annex 4).
- 3. The Mational Project Management to submit to the Government candidates/fellowship training according to Annex 5.
- 4. UIDP and UNIDO to approve the updated Work Plan (Annex 9).
- 5. Ministry of Industry to issue official request to UNIDO for approval of Project Bocument for the International Meeting on Small Scale Industry-Institute linkage with a special reference to Instrumentation.

UNITED NATIONS INDUSTRIAL DEVELOPMENT ORGANIZATION

UNIDO

22 October 1982

REQUEST FROM THE GOVERNMENT OF THE REPUBLIC OF INDIA

INTERNAL

JOB DESCRIPTION

DP/IND/82/002/11-01/31.9.B

Post title

Chief Technical Adviser (CTA)

Duration

8 months (4 months in 1982/83; 2 months in 1984; 3 months in 1985)

Date required

December 1982

Duty station

Bombay

Purpose of project

To establish facilities for evaluation and testing of electric, electronic and pneumatic process control instruments and to undertake reliability and safety tests of products manufactured in the country before they are introduced in the marker

Duties

In close cooperation with the National Project Director and counterpart personnel, the CTA will specifically be expected to:

- Assist the National Project Director in the implementation of the programme and to hold overall responsibility for the implementation of the project on behalf of the Executing Agency.
- 2. Advise and extend necessary suitable guidance to the experts and counterpart staff in respect of technical matters and problems.
- 3. Coordinate with the National Project Director during the project implementation stage both in administrative and technical functions.
- 4. Stay at the project location for 4 months during the initial stages followed by two short visits of two months duration each. The second visit being for mid-term review of the project activities and the last for final execution/implementation of the project in all respects.

Applications and communications regarding this Job Description should be sent to:

Project Personnel Recruitment Section, Industrial Operations Division UNIDO, VIENNA INTERNATIONAL CENTRE, P.O. Box 300, Vienna, Austria

Duties

The CTA will also be expected to follow UNDP standards, rules and regulations of the reporting procedure.

The expert will also be expected to prepare a final report, setting out the findings of the mission and recommendations to the Government on further action which might be taken.

Qualifications

The CTA should be an electronics/instrumentation engineer with specialisation in process instrumentation and having experience in their application/maintenance/evaluation procedures, and preferably with previous experience in handling similar project execution work.

Background Information

IDEMI with its close assocation with the indigenous instrument industry for more than a decade of its existence, has been able to identify the areas which directly or indirectly affect the industry's development growth. It has been observed that one of the major handicaps responsible for insufficient growth of this industry in general is lack of certain specialized facilities for production evaluation and non-existence of authorised institutions capable of extending such facilities. This is particularly true in the case of process control instruments evaluation. As of present no organization exists in the country which has fully fledged facilities for testing and evaluating the complete range of process control instruments. There are about 300 units currently engaged in production of process control instruments, components and other accessories. Towards the end of the sixth Five Year Plan it is expected that by optimum utilization of the existing production capacity and also through an expansion and diversification programme, the current production of process control instruments may rise from the present 40% (worth about Rs. 20 crores) to about 70%. Even Fough some of the large-scale manufacturers and user industries have already established limited testing facilities exclusively for their own use, it is far from the reach of small scale manufacture with the result that their increasing evaluation needs remain unfulfilled.

The small scale instrument industries have their own inherent limitations to have the required test facilities and the expertise to change or modify the designs based on reliability evaluation studies. For undertaking reliability evaluation studies, especially on electronic process control instruments, the need for establishing the required facilities is also justifiable.

Another area in which suitable facilities are very much lacking in the country is for evaluation of instruments for intrinsic safety. Electrical or electronic process control instruments for use in hazardous process plants have to be perfectly evaluated for their suitability for any given application. The expeditious establishment of Process Control Instruments Test and Evaluation Centres both as service to manufacturers as well as for safeguarding the interest of consumers or the user industries is, therefore, of utmost importance.

CTA WORK PLan

FIRST

ACTIVITIES

- 1. First-hand acquaintence with the existing facilities and personnel. 2. Discussions with the National Project Manager
- on project objectives, outputs, inputs, activities. 3. Preparation of the CTA Work Plan
- 4. Visits to various industries

5. Finding's outline

- 6. Preparation of the Preliminary Report
- 7. Preparation of the Work Plan for the project 8. Discussion the Work Plan for the project with UNDP Res. Rep. and SIDFA
- 9. Preparation of Specifications for imported equipment. 10. Preparation of specification for indigenous
- equipment. 11. Identification of companies for the National Project Manager's study tour.
- 12. Preparation of Mission report
- 13. Discussions on the Mission report with UNDP Res. Rep. and SIDFA
- 14. Departure

Dura	ation, Qualifications, Experience & Duties of the Exper	ts		

1. Chief Technical Adviser

No change

2. Expert in Instrument Design

Duration: Pour months

- Duties: In close co-operation with the National Project Ranager, counterpart personnel and the Chief Technical Adviser, the expert will specifically be expected to:
 - 1. Assist in structuring a team, capable to carry out design & development activity
 - Assist in setting up the design & development facilities (space, equipment, tools, arrangement)
 - 3. Assist in setting up the design & development procedures and guidance materials by designing a specific prototype.

The expert will also be expected to carry the follow-ing materials, prepared in advance:

- List of literature on the post subject, which reflects the most advanced State-of-the-Art in the field concerned.
- Standards, instructions and procedures, reflecting the design, testing and evaluation of the products in the field concerned.

- Approximately 4000 5000 words Introductory Lecture (with the corresponding slides) on the field concerned
- Some specific materials and/or components if necessary.

The Expert will also be expected to prepare a final report, setting out the findings of the mission and recommendations to the Government on further action which might be taken.

Qualification:

An electronic engineer with a good background in instruments design & development. He shoul have at least 10 years of continuous working experience in instrument design in a R & D Institute or department. He should be still acting as R & D Project leader in instrumentation.

3. Expert on Microprocessor
Instruments Design and Development

Duration:

Four months

Duties

In close co-operation with the Mational Project Manager, counterpart personnel and the Chief Technical Adviser, the Expert will specifically be expected to:

- 1. Assist in structuring a team, capable to carry out microprocessor instruments & system design and development.
- 2. Identify areas of local industries for implementation of microprocessor instruments & systems.
- 3. Assist in development of a low-cost Microprocessor instrument (LDS Fhilips PM 4421 and Intel 8080 components available at LDEMI)
- 4. Assist in setting up Training programme and training facilities on microprocessors (Intel training kit's available at IDEMI)

The Expert will also be expected to carry the following materials, prepared in advance:

- List of literature on the post subject, which reflects the most advanced State-of-the-Art in the field concerned.
- Standards, instructions and procedures, reflecting the design, testing and evaluation of the products in the field concerned.
- Approximately 4000 5000 words Introductory Lecture (with the corresponding slides) on the field concerned
- Some specific materials and/or components if necessary.

The Expert will also be expected to prepare a final report setting out the findings of the mission and recommendations to the Government on further action which might be taken.

Qualification:

An electronic engineer with a good background on microprocessors instruments & system design (software & hardware). He should have minimum 5 years of working experience in microprocessor instruments & system design. He should be still acting as Microprocessor Design Team Leader in instrumentation.

4. Expert on Quality Control & Reliability evaluation procedures

Duration:

Four months

Duties :

In close co-operation with the National Project Manager, counterpart personnel and the Chief Occhnical Adviser, the Expert will specifically be expected to:

1. Assist in setting up the Testing & Calibration facilities for power, voltage, current, frequency, resistance, capacitance, inductance, temperature, flow, pressure, humidity, vibration.

2. Assist in setting up procedures and guidance materials for testing & calibration, quality control and reliability evaluation of electrical, electronic and pneumatic measuring and process control instruments and demestic appliances.

The Empert will also be empected to carry the following materials, prepared in advance:

- List of literature on the post subject, which reflects the most advanced State-of-the-Art in the field concerned.
- Standards, instructions and procedures, reflecting the design, testing and evaluation of the products in the field concerned.
- Approximately 4000 5000 words Introductory Lecture (with the corresponding slides) on the field concerned.
- Some specific materials and/or components if necessary.

The Expert will also be expected to prepare a final report setting out the findings of the mission and recommendations to the Government on further action which might be taken.

Qualification

An electrical or electronic engineer with a good background on quality control and reliability evaluation of measuring and process control instruments. He should have at least 10 years of continuous working experience in a quality & reliability testing Laboratory. He should be still acting as Testing Laboratory Team Leader for Instrumentation.

5. Expert on Tool Design

Duration : Five months

Duties: In close- co-operation with the National Project Manager, counterpart personnel and the Chief Technical Adviser, the Expert will specifically be expected to:

- 1. Assist the Tool Design section of IDEMI in design of tools, jigs and fixtures for the small scale industries, producing various instruments and domestic appliances.
- 2. Assist in design of tools for plastic instruments components by replacing the existing metal components.
- 3. Assist in evaluation of plastic materials to be used in measuring and process control instruments and domestic appliances.
- 4. Assist in preparation of Training programme on Tool Design.

The Expert will also be expected to carry the following materials, prepared in advance:

- List of literature on the post subject, which reflects the most advanced State-of-the-Art in the field concerned.
- Standards, instructions and procedures, reflecting the design, testing and evaluation of the product in the field concerned.
- Approximately 4000 5000 words Introductory Lecture (with the corresponding slides) on the field concerned.
- Some specific materials and/or components if necessary.

The Expert will also be expected to prepare a final report, setting out the findings of the mission and recommendations to the Government on further action which might be taken.

Qualification

A mechanical engineer with a good background in tool design for instruments and domestic appliances. He should have at least 10 years of continuous working experience in tool design in a Tool Design institute, department or section. He should be still acting as a Tool Design Leader in design of tools for instrumentation.

6. Empert on Domestic Appliances Design

Duration: Four months

Duties:

In close co-operation with the Mational Project Manager, counterpart personnel and the Chief Technical Adviser, the Expert will specifically be expected to:

- 1. Assist in development of household domestic appliances and indigenization of selected imported models of some such appliances.
- 2. To guide and assist in setting up the laboratory facilities for testing of domestic appliances.
- 3. To advise on evaluation procedures and quality control of domestic appliances.

The Expert will also be expected to carry the following materials, prepared in advance:

- List of literature on the post subject, which reflects the most advanced State-of-the-Art in the field concerned.
- Standards, instructions and procedures, reflecting the design, testing and evaluation of the products in the field concerned.
- Approximately 4000 5000 words Introductory Lecture (with the corresponding slides) on the field concerned.
- Some specific materials and/or components if necessary.

The Expert will also be expected to prepare a final report, setting out the findings of the mission and recommendations to the Government on further action which might be taken.

Qualification:

A mechanical or electro engineer with a good back-ground in design and development of domestic appliances and household instruments. He should have at least 10 years experience in design and development of domestic appliances in a R & D department. He should be still acting as Design Team Leader in domestic appliances and household instruments.

7. Expert on Tool Hanufacture

Duration : Three months

Duties

- : In close co-operation with the National Project Manager, counterpart personnel and the Chief Technical Adviser, the Expert will specifically be expected to:
 - 1. Assist the Tool Workshop at IDENI in structuring a team, capable to carry out production of precision Press-tools, Jigs & Fixtures, Mould for Plastic & Die-Casting components and Precision machining Jobs.
 - 2. Assisting in setting up the Tool Workshop facilities (space, equipment, tools, arrangement).
 - 3. Assist in setting up the machining procedures and guidance materials machining of tools, jigs and fintures and general precision machining jobs.
 - 4. Assist in preparation of Training Programme on machining of tools, jigs and fixtures.

The Expert will also be expected to carry the following materials, prepared in advance:

- List of literature of the post subject, which reflects the most advanced State-ofthe-Art in the field concerned.
- Standards, instructions and procedures reflecting the design, testing and evaluation of the products in the field concerned.
- Approximately 4000 5000 words Introductory Lecture (with the corresponding slides) on the field concerned.
- Some specific materials and/or components if necessary.

The Expert will also be expected to prepare a final report, setting out the findings of the mission and recommendations to the Government on further action which might be taken.

Qualification: A mechanical engineer with a good background in tool production. He should have at least 10 years experience in machining and tool production.

8. Empert on High Pressure Digital pneumatic Instruments

Duration: Eight months

Duties : In close co-operation with the National Project
Manager, counterpart personnel and the Chief
Technical Adviser, the expert will specifically
be expected to:

- 1. Assist in structuring a team, capable to carry out design & development activity.
- 2. Assist in setting up the design & development facilities (space, equipment, tools, arrangement).
- 3. Assist in preparation of a Long-term Programme for development of High-Pressure Pneumatic-Logic process control instruments for Low-cost automation, based on the requirements of the local small-scale industries.
- 4. Assist in organising a Training Programme on Low-cost automation, based on Pneumatic-logic process control instruments.

Qualification: A mechanical engineer with a good background in design of High-pressure Digital pneumatic instruments and Low-cost system for automation with such instruments. He should have at least 10 years of continuous working experience in pneumatic digital instruments design and low-cost systems for automation.

Training of national staff through study tours/fellowships in the following areas

	Activity	Location	Starting date	Duration
(i)	Study tour of the Mational Project Director for on-the-spot study of the various facilities available in similar sectors and industrial units manufacturing laboratory equipment, domestic appliances and Process Instruments	U.S.A./ Japan/ Europe	June 1983	2 months
(ii)	Training of a Joint Director in Process Control Instruments Evaluation	- do-	Jan. 1984	4 months
(iii)	Training of a Joint Director in Product and process development of Domestic Appliances	- do-	June, 1984	4 months
(iv)	Training of a Deputy Director in Household Appliances	- do-	June, 1984	4 months
(v)	Training of a Deputy Director in Low-cost Instruments development	-do-	June, 1984	4 months
(vi)	Training of a Deputy Director in Manufacturing Techniques (Tool Room Activities)	- do-	April 1984	4 months
(vii)	Training of an Assistant Director in Modern Tooling Methods	-do-	June 1984	4 months

	Activity	Location	Starting date	Duration
(viii)	Training of an Assistant Director in Electronic Process Instruments testing	U.S.A./ Japan/ Europe	August 1984	4 months
(ix)	Training of an Assistant Director in Domestic Appliances evaluation	-do-	September 1984	4 months
(%)	Training of an Assistant Director of Reliability Evaluation of electronic instruments	- do-	September 1984	4 months
(xi)	Training of an Assistant Director in Tooling Methods	-do-	January 1985	4 months
(xii)	Training of an Assistant Director in Development of Low-Cost Instruments and Systems	-do-	January 1985	4 months
(xiii)	Training of a Senior Technical Assistant in Quality Control of Low-cost Instruments	-do-	Janua ry 1985	4 months
(xiv)	Training of a Senior Technical Assistant in Quality Control of Domestic Appliances	-do-	January 1985	4 months
(xv)	Group training of 4 engineers on Basic Micro- processor Design Philosoph;	- do-	November 1984	4 weeks

MANAGE MANAGE DE COMMUNICACIÓN PROGRANTE

TRIBULE: DESTRICT ESTREES

PROCESS DEVELOTIBLE CRIERE AT IDEAL, ROTTAY

(For Period Describer 1982 to May 1983)

IMPRODUCTION

The review meeting was held at IDEMI, Bombay on 27 May 1985 and was attended by the following:

Government of India

1. Mr. B. Majumdar

Industrial Advisor (Electrical and Electronics)

IDE".I

2. Mr. P.K. Krichnamurthi

Principal Director IDEMI

UMDP/UNIDO

1. Kr. A. Krasiakov

Senior Industrial Development

Field Adviser

2. Lr. I. Petrov

Chief Technical Adviser

3. Mr. Sat Pal

Assistant Programme Officer

Prior to the meeting the UNDF/UNIDO representatives were shown round the laboratories and workshops of the Institute to acquaint them with the facilities set up over the last six months including the Testing and Calibration laboratory, Process Control Instrument laboratory, Design and Development laboratory,

Tool Design section and Tool Mamifacturing shop. The equipment already received has been installed and commissioned. The participants also visited a factory engaged in the manufacture of electronic balances and portable electronic cardioscopes. IDEMI is providing assistance to this unit in manufacturing fine mechanical parts for electronic balances. This was followed by the Tripartite Review Meeting.

The Project document, the six-monthly progress report and the revised work plan prepared by the CTA were used as reference documents for the review meeting.

- 1. E. Majumdar was requested to chair the meeting and conduct the proceedings.
- 2.(a) Prof. I. Petrov, Chief Technical Adviser, gave a brief account of the activities of the project carried out during the reporting period. He informed the meeting that the re-orientation of the present facilities including large-scale re-construction work have been completed. Out of the 67 items of equipment ordered by UNIDO, 60 items have already been received and are being used in the various laboratories and the workshop to provide assistance to the industry in the areas of testing and calibration, design and tool manufacture, training of engineers from the industry. The equipment now available with the IDEMI will enable it to provide specialised services to the industry in terms of critical tooling, and calibration facilities for instruments requiring higher order of accuracies.
 - (b) The meeting agreed that the immediate objectives of the project as originally set out in the project document are still valid and do not require any changes.

A proposal contemplating certain changes in the cutputs and activities of the project was discussed in the meeting. Fursuant to the discussion Kr. Krasiakov said that the proposal needed to be considered more thoroughly and suggested that it may be deferred for consideration future tripartite review meeting.

(c) The proposals contained in the Revised Work Plan prerared by the CTA contemplating certain changes in the personnel, training and equipment components of the project were discussed in detail. The meeting agreed to recommend the following changes:

Personnel

To increase the number of international experts from 5 to 8 and the total man-months from 32 to 40 as follows:

	Fost Mitle	Duration
1.	Chief Technical Adviser	8 (4+2+2)
2.	Expert in Instrument Design	4
3•	Expert in Microprocessor Instruments Design & Development	4
4.	Expert in Quality Control & Reliability Evaluation procedures	4
5.	Expert in Tool Design	5
6.	Expert in Domestic Appliances Design	4
7.	Expert in Tool Mamufacture	3
8.	Expert in High Pressure Digital Pneumatic Instruments	8

Conclusions and Recommendations

In the light of the discussions held, the tripartite review meeting agreed to make the following recommendations:

- 1. An increase of \$ 217,000 in the UNDP inputs to cover the cost of additional 8 man-months in the expert component, 30½ man-months in the training component and funds for procurement of additional items of equipment.
- 2. Necessary budget revision to reflect the allocation of additional funds should be prepared and procured for approval through the Ministry of Industry, Department of Economic Affairs and INDP.
- 3. Based on the revised job descriptions, UNIDO should identify suitable candidates for the post of experts to be assigned to the project in 1984 and submitted their nomination for consideration by the Government.
- 4. Completed nomination forms of candidates to be deputed for fellowship, training in 1934 should be submitted by the Project authorities officially through the Ministry of Industry well in advance to enable UNIDO headquarters to make appropriate placement arrangements.

THE DESIGNATION OF THE PROCESS OF TH

PROJECT REVESION

COUNTRY: INDIA

PROJUCT TITLE : Evaluation and Product-cum-Process

Development Centre at IDEMI, Bombay.

PROJECT NO. : IND/32/002/C/01/37

Government requested that the budget of the above project be revised:

- 1) to rephase the 1983 inputs, not likely to be implemented during this year, into the future years.
- 2) to make provision of funds for additional 8 man-months in the personnel component budget line 11.
- 3) to make provision of funds for additional 26 man-months in budget 31 and 4% man-months budget line 32 under the training component.
- 4) to provide additional \$71,600 in the equipment component budgetline 49 for the procurement of essential items of equipment.

The change to the project budget - UDP input is as follows:

Previous UEDP input - budget code '3' \$ 1,030,000 (line 99 total)

Review UEDP input - Budget code 'C' \$ 1,237,000 (line 99 total)

UEDP input - increase \$ 217,000

3. ANNEXES

- 1. Cant chart for Output No. 1 Capability to provide design, testing, evaluation and training on electronic, process control, domestic appliances & low-cost instruments.
- 2. Cant chart for Output No. 2 Capability to design and manufacture tools for the needs of small scale industries.
- 3. Building Bar chart
- 4. Local Personnel Recruitment Ear chart
- 5. Training Abroad Time Schedule
- 6. Equipment Bar chart
- 7. International Experts Time Schedule
- 8. Time Schedule for the work-visits at UNIDO-Vienna by the . National Project Director.

4. ABSTRACT

The Work Plan is prepared according the Project Revision Document.

The major outputs are as follows:

Output No. 1: Carability to provide design, testing evaluation and training on Electronic, Process Control, Lomestic Appliances and low-cost Instruments. Completion March 1985.

Output No. 2: Capability to design and manufacture tools for the needs of small scale industries.

Completion November 1984.

The activities are described, milestones established.

The illustrations are performed by Gant-chart (Annex 1 & 2), supported by Bar-chart for the corresponding sub-activities.

The Progress Reports are scheduled every six months.

The first draft of the Final Report is planned for April, 1985.

Tripartite Review Missions are planned in January, 1984 & January 1985.

5. THE WORK PLAN

5.1 General

The Work Plan was prepared following the instructions, outlined in the basic documentation recommended by UNIDO.

The Work Plan is prepared according to the Project Revision Document.

5.2 Outputs

The outputs of the project are identified as follows:

Output No. 1

Capability to provide design, testing, evaluation and training on electronic, process control, domestic appliances and low-cost instruments.

The completion is estimated end of March, 1985. It is important to keep strictly this milestone, in order to meet the project document final date of completion, as well as to establish the necessary conditions for concluding contracts for providing services to industry during 1985.

The Gantt chart is attached as Annex 1.

Cutput No. 2

Capability to design and manufacture tools for the needs of small-scale industries.

For production of these outputs the necessary realistic inputs and activities are planned. The major milestones are developed and fixed up.

The Gantt chart is attached as Annex 2.

The completion is estimated end of November, 1984, thus establishing the necessary conditions for concluding contracts for providing services to the small-scale industries.

5.3 Activities

5.3.1. Activities for Output No. 1

Capability to provide Design, Testing, Evaluation and Training on Electronic, Process Control Domestic Appliances, and low-cost Instruments. Completion March, 1985.

The activities are performed and described in Gantt-chart, Annex 1.

The major activities, sub-activities and milestones are as follows:

A. Recrienting the present facilities.

It was considered that certain space could become available by re-conditioning of the sunk floor in the workshop and main office building of this Institute to facilitate suitable erection of laboratory equipments and workshop machineries received in the frame of this project.

These activities have to be completed in June 1983 (Annex 1 and Annex 3).

B. Civil Construction

Civil construction to take place to have one more floor raised in the present Administrative Building, thus obtaining extra space required for the laboratories. The major milestones (Annex 1) are as follows:

- B-1 Obtained budget approval by the Government by end of June 1983.
- B.2 Completed contract for re-construction, end of August 1983.
- B.3 Interior completed end of May 1984.

C. Staff Recruitment

The recruitment of national staff has to be completed end of October, 1983. Detailed list of staff and appointment time schedule is given in Annex 4.

D. Training of staff abroad

The training of national staff abroad has to be completed end of April, 1985 (Annex 2). A detailed Time Schedule for the training is prepared (Annex 5).

E. Equipment Supply

A detailed Bar chart for the equipment supply is performed in Annex 6. The major milestones are as follows:

- All Purchase Orders have to be placed by end of December, 1984.
- All equipments have to be commissioned not later than March 1984.

F. International Experts

The major milestone are stipulated in a way to mark the international experts' arrival on post.

The experts arrival on post is co-ordinated with the appointment of corresponding national staff members, the equipment supply and the terms for Output planned. The details for International Experts are given in Annex 7.

G. Industrial Demand Survey

In order to start providing services to the local industries, an industrial survey has to be carried out by the National Project staff in co-operation with the International Experts.

The major milestones are:

- Questionnaires prepared by the end of July, 1984.
- Survey completed and number of contracts for Industry Services for 1985 concluded by the end of March, 1985.

5.3.2 Activities for Output No. 2

Capability to design and manufacture tools for the need of small scale industries. Completion November, 1984. The activities are performed and described on Gant-chart, Annex 2.

The major activities, sub-activities and milestones are as follows:

- A. Re-orienting the present facilities.
 No civil constructions are required for the tool room facilities. The problem will be solved by re-orienting the present facilities. This re-orientation is already thoroughly planned and has to be completed in June, 1983 (Annex 3)
- B. Staff Recruitment
 The recruitment of national staff has to
 be completed by the end of October, 1983
 (Annex 2). Detailed time schedule for
 appointment of the national staff is given
 in Annex 4.

- C. Training of staff abroad

 The training of national staff abroad on
 design and manufacturing of tools has to
 be completed end of April, 1985 (Annex 2).
 A detailed Time Schedule for the training
 is prepared (Annex 5).
- D. The International Expert
 International Experts on tool design and
 manufacture are to be on post 1st November,
 1983 for 3 months, respectively 1st August,
 1984 for 5 months. Details are given in
 Annex 7.
- E. Equipment Supply
 A detailed Bar chart for the tool room
 equipment is performed in Annex 6. The
 major milestones are as follows:
 - Purchase Orders placed, November 1983.
 - Equipments commissioned, June 1984.
- F. Industrial Demand Survey
 This survey has to be carried out by the
 National Project staff in co-operation with
 the International Expert. The major
 milestones are:
 - Questionnaries prepared by end of April 1984.
 - Survey completed and number of contracts for industry surveys for 1985 completed by the end of November, 1984.

5.4 National Project Director's visits to UNIDO

For the purpose of close co-operation between the National staff and UNIDO, enabling smooth development of the project activity, several visits of the National Project Director are planned to UNIDO, Vienna. His first visit will take place in July, 1983 during his study tour.

The second visit is planned in June, July, 1984.

The third visit is planned in March, 1985.

Details are given in Annex 8.

6. REPORTS

The following reports for the project development have to be prepared by the National Project staff:

- Progress Reports : 30th June, 1983 30th of Lecember 1983 30th of June 1984 30th of December 1984

- Self-evaluation
Report : July 1983

- Final Report : 30th of April, 1985.

7. TRIPARTITE REVIEW MISSION

The following tripartite review mission are proposed:

1. January 1984

2. January 1985

8. EVALUATION

The project will be subject to evaluation in correspondence with the policies and procedures established for the purpose by UNDP. The Organization, terms of reference and timing of the evaluation will be decided by consultation between the Government, UNDP and Executive Agency.

PROJECT PROPOSAL

Project Title	3	International meeting on Small-Scale Industry-Institute Linkage with
•		Reference to Instrumentation
Kumber	3	R2/IND/83/-

Primary function : Training
Secondary function : Direct support

Duration : One week Sector(Go√t.' : Industry

classification)
UNIDO classification : Industry

Sub-sector (Govt: : Small Scale Industry classification)

UNIDO classification ?
Government

Implementing Agency : Ministry of Industry through Institute for Design of Electrical Measuring Instruments (DTMI), Bombay.

Executing Agency : United Nations Industrial Development Organization (UNIDO)

Estimated starting date: August 1983
UNIDO contribution: US \$ 63,465

Government of India counterpart contribution(in kind) : 5.108,000

Signed

(on behalf of the Government)

Date

(on behalf of UNIDO)

Date

PART - I

PART - II

THE PROJECT

A. Development Objectives:

The main objectives of the meeting will be to acquaint some 20 representatives from selected developing countries with the long years of proved experience of the Institute for Design of Electrical Measuring Instruments (IDIII), Bombay in its cooperation with the Industries in India. The process of marketing, feasibility studies, design, testing and calibration linkage between the Institute and industries will be presented and discussed during the meeting. The very effective and successful implementation of a UNDP/UNIDO Project (DP/IND/82/002) will also be discussed.

B. Immediate Objectives

- 1) To analyse the Indian experience in the Industry-Institute's co-operation with Special Reference to Instrumentation by effective implementation of UNDP/UNIDO assistance.
- 2) To visit various laboratories and workshop of the Institute as well as some production units of Government and private industries, to see the linkage between the Institute and industry.
- 3) To compare the experience of the participating countries with the Indian experience in order to reach conclusions for more efficient organization in the participant's country.

4) To discuss ways and means of co-operation between the participating countries and the Institute for Design of Electrical Measuring Instruments both in using its highly qualified personnel, laboratories and facilities for training the fellows, and the role of UNIDO in this co-operation.

Co Special Considerations

In 1981 an International Meeting on the subject was organised by UNIDO and the Government of P.R. of Bulgaria with host organization the Institute for Instrument Design (IID) - Sofia, established by joint efforts of the Government of Bulgaria and UNDP/UNIDO.

This meeting proved to be extremely fruitfull, several Twining Agreements are signed between Institute for Instruments Design and Institutes in Cairo-Egypt, Bankok-Thailand, Damascus-Syria. Additional twinning agreements are under process to be concluded between IID and institutes in Jordan and Algeria. As a follow-up the Institute for Instrument Design was requested to provide and it did provide (in cooperation with UNIDO) expert assistance, training assistance and consultancy to the Thailand Institute for Technological Research-Bangkok, the National Organisation for Scientific Research-Algeria, Electronic Industries Research and Development Centre-Cairo, IDEMI-Bombay.

At this 1981 Meeting a unanimously desire was expressed by the participants UNDO to continue to organise in the future such meetings, thus assisting the developing countries in better utilization of national resources in providing R & D, testing & calibration and training services to the growing national industries.

IDEMI-Bombay, implementing UNDP/UNIDO assistance is providing services to more than 300 industrial units in India, thus becoming almost self-sufficient organization. In this respect IDEMI-India is an excellent example for the developing countries.

D. Background and Justification

The Institute for Design of Electrical Measuring Instruments (IDEMI) was founded a decade ago by joint efforts made by United Nations Development Programme (UNDP) and the Govt. of India and United Nations Industrial Development Organization (UNIDO) as an Executing Agency. IDEMI is functioning as an autonomous body totally supported by the Department of Industrial Development, Ministry of Industry, Government of India.

Governing Council of IDEMI comprises of various representatives of Govt. of India, State Governments, Public and Private Sectors of the Industry.

Industry Organization. Regardless of its marginal objectives it has slowly diversified its activities with the demands made by the times and situations. And by and now IDEMI has been serving Industries related to Electrical Measuring Instruments, Electrical Household Appliances, Process Control Instruments & Electronic Instruments. Not restricting to such infustries, IDEMI has also been according assistance to large number of small scale organizations. IDEMI is maintaining a constant rapport with more than 300 units of the industry and broadly imparting the assistance in following categories:

- 1. Technical Consultancy in various aspects of Instrumentation.
- 2. Assistance in Design and Development of new Electronic Instruments.
- 3. Instrument testing and calibrating to the Standards.
- 4. Tool Design, Tool Making and other workshop facilities.
- 5. Technical Personnel Training at varous levels.

These services are provided to the industry on commercial basis (by contracts) under which the Institute earns more than &.1.5 million per year (1 UC \$ = 9.7 Ruppes), thus becoming self-sufficient organization. The Institute carry out a sucressfull implementation of a UC \$ 1 million UNDP Project setting up a dynamic Evaluation & Product-cum-Process Development Centre, offering on a commercial basis extremely valuable services to a large number of small-scale industries by testing, calibration, consultancy, design & development, training, tool design and tool production.

E. Outputs

Some 20 representatives from developing countries acquainted:

- 1. With the ways and means of organization of national resources of a developing country for establishing an Institute who provide highly qualified services to the growing national industry, utilising the UNDP/UNIDO assistance.
- 2. With modern laboratories and trained personnel capable to carry out large scope of activities (design & development, consultancy, testing & calibration, training) servicing more than 300 industry's undertakings throughout the country.

3. With the ways of cooperation with the growing number of small-scale industries suffering lack of sophisticated test and production equipment and Exploying low-skilled manpower.

F. Activities

	Activity	Location	Starting date	Duration
1.	Intimation official Government request for the Project	New Delbi	Мау 1983	1 month
2.	Approval of the Project Document for the meeting by UNIDO Programming Committee	Vienna	June 1983	3 months
3.	Work meeting at UNIDO for preparation of the final Aide-Memoire and Selecting the countries to be invited (Principal Director of IDAMI visits UNIDO for four days)	Vienna	December 1983	4 days
4.	Distribution of the Invitation through ChDP Resident Representatives	Vienna	January 1984	1 month
5•	Receiving applications from participating countries.	Vienna	May 1984	3 months
6.	Final selection of the participants (UNIDO representatives visit IDEXI, Boabay)	Bombay	Septëmber 1984	5 days
7.	Distribution of letters of Awards by UNIDO	Vienna	October 1984	1 month
8.	Arrival of the participants	Bombay	19th Jen.1985	~
9.	The meeting	Bombay	20th Jan,1985	5 days :

G. Inputs

1. Government Inputs

The Government will provide through the implementing Agency the following inputs for the project:

- Local transportation
- Preparation of two contribution papers
- All conference facilities (including conference room, interpretation, reproduction of documents needed during the meeting and Secretarial services.

All contribution in kinds %.108.000

2. UMIDO Inputs

UNIDO will provide:

- Round trip air transportation for the participants between the airport of departure in the home country and Bombay airport.

airport.	
for 20 participants (2000 \$ each)	US \$ 40,000
- Round trip air transportation for DEMI Principal Director's visit to UNIDO	US \$ 2,000
- Round trip air transportation for UNIDO Secretariat's visit to IDEMI UNIDO representatives (2 persons) to	US \$ 4,000
Rombay for Co-Chairmanship (for 3 persons 2000 \$ each)	US \$ 6,000
- DSA for 7 days for 20 participants (DSA 65 % per day)	US \$ 9,100
- DSA for 5 days visit to Vienna of IDEMI Principal Director (DSA 70% per day)	US \$ 350
- DSA for 5 days of UNIDO representatives visit to IDEMI for Selection of the candidates (DSA 65 \$ per day)	us \$ 650
- DSA for 7 days of UNIDO representatives visit to IDEMI for Co-Chairmanship (DSA 65 \$ per day)	US \$ 1,365
Total UNIDO Contribution	US \$ 63,465

H. Preparation of Work Plan

The outlines of the Work Plan area shown in the section F. Activities.

A detailed Work Plan will be prepared during IDEH Principal Director visit at UNIDO, Vienna in December 1984.

The following contribution papers will be submitted for discussion at the International Mesting Small-Scale Industry-Research Institute Linkage with Special Reference to Instrumentation.

(1) Research Institute-Industry Linkage with Special Reference to Instrumentation.

Contributed by Mr. P.K. Krishnamurthi
Principal Director of IDEMI &
National Project Kanager of
UNDP-UNIDO Project.

(ii) Testing & Calibration services to Small Scale Industries - a tool for improving of the Quality of the indigenous products.

Contributed by Joint Director of IDEM _

(111) Successful implementation of UNDP/UNIDO Project with its Special Reference to the Project No.DP/IND/82/002 - Evaluation & Product-cum-Process Development Centre at IDEMI.

Contributed by: Prof. I. PETROV
UNIDO Chief Technical Adviser
DP/IND/82/002

(iv) UNITOO Experience in Industry-Research Institute's co-operation.

Contributed by: UNIDO Secretariate

Furthermore, a Round-Table discussion on efficient organization of the National Human Resources for the Development of the R & D and Industry Activity will be organised.

Directed by Dr. RAMANNA Director, BARC
Assisted by P.K. KRISHNAMURTHI, Principal Director
IDEMI

Visits to some selected Government and private Enterprises are scheduled in order to acquaint the participants with the organization and transfer of IDEXI services to industries, the difficulties encountered by these Enterprises in the productive phase and what has been done to overcome to these difficulties.

Part III

SCHEDULE OF MONITORING, EVALUATION AND REPORTS

The Project will be subject to periodic review in accordance with the policies and procedures established by UNIDO for monitoring the project implementation.

MEETING ON SMALL SCALE DIDUSTRY -

RESEARCH INSTITUTE LINKAGE WITH SPECIAL REFERENCE TO INSTRUMENTATION

AIDE - MEMOIRE

1. PACKGROUND INFORMATION

The United Nations Industrial Development Organization (UNIDO) and the Government of India (Ministry of Industry) will organise a meeting on Small Scale Industry - Research Institute Linkage with Special Reference to Instrumentation in Bombay, 20 to 25 January, 1985.

The Institute for Design of Electrical Measuring Instruments (IDEMI) Bombay was designated as the Government Counterpart Agency to co-organise and to host the meeting.

This meeting is an unique opportunity to become acquainted with the excellent linkage between the Institute and industry, practised during the last 10 years.

The Institute for Design of Electrical Measuring Instruments was founded a decade ago by joint efforts made by United Nations Development Programme (UNDP) and the Govt. of India and United Nations Industrial Development Organization (UNIDO) as an Executing Agency. IDEMI is functioning as an autonomous body totally supported by the Department of Industrial Development, Ministry of Industry, Government of India, Governing Council of IDEMI comprises of various representatives of Govt. of India, State Governments, Public and Private Sectors of the Industry.

Industry Organization. Regardless of its marginal objectives it has slowly diversified its activities with the demands made by the times and situations. And by and now IDEM has been serving Industries related to Electrical Measuring Instruments, Electrical Household Appliances, Process Control Instruments & Electronic Instruments. Not restricting to such industries, IDEMI has also been according assistance to large number of small scale organizations. IDEMI is maintaining a constant rapport with the industry and broadly imparting the assistance in following categories:

- 1. Technical Consultancy in various aspects of Instrumentation
- 2. Assistance in Design and Development of new Electronic Instruments.
- 3. Instrument testing and calibrating to the Standards.
- 4. Tool Design, Tool Making and other workshop facilities
- 5. Technical Personnel Training at various levels.

These services are provided to the industry on market basis (by contracts) under which the Institute earns more than 8.1.5 million per year, thus becoming self-sufficient. In 1985 the Institute completes successfully implementation of a US \$ 1 million UNDP Project setting up a dynamic Evaluation & Product-cum-Process Development Centre.

2. OPJECTIVES OF THE MEETING

DEVELOPMENT OBJECTIVES

The main objectives of the meeting will be to acquaint some 20 representatives from selected developed countries with the long years of proved experience of the Institute for Electrical Measuring Instruments in its co-operation with the Industries in India. The process of marketing feasibility studies design, testing and calibration linkage between the Institute and industries will be presented and discussed during the meeting. The personnel recruitment and training aspects will also be discussed.

INCEDIATE ORJECTIVES

- To analyse the Indian experience in the Industry-Institute's co-operation with Special Reference to Instrumentation.
- To visit various laboratories and workshop of the Institute as well as some production units of Government and provide industries, to see the linkage between the Institute and industry.
- To compare the experience of the participating countries with the Indian experience in order to reach conclusions for more efficient organization in the participant's country.

To discuss ways and means of co-operation between the participating countries and the Institute for Design of Electrical Measuring Instruments both in using its highly qualified personnel, laboratories and facilities for training the fellows, and the role of UNIDO in this co-operation.

5. PROGRAMME OF THE MESTING

- (a) The following papers will be submitted for the discussions
 - (1) Research Institute-Industry Linkage with Special Reference to Instrumentation.

Contributed by Mr. P.K. Krishnamurthi

Principal Director of IDEMI &

National Project Manager of

UNDP-UNIDO Project.

(ii) Testing & Calibration services to Small Scale

Industries - a tool for improving of the quality of the indigenous products.

Contributed by Joint Director of IDEMI

(111) Successful implementation of UNDP/UNIDO Project with its Special Reference to the Project
No.DP/ED/82/002 - Evaluation & Product-cumProcess Development Centre at IDEMI.

Contributed by: Prof. I. PETROV

UNIDO Chief Technical Adviser

DP/IND/82/002.

(iv) UNIDO Experience in Industry-Research Institute's co-operation.

Contributed by : UNIDO Secretariate

(b) Furthermore, a Round-Table discussion on efficient organization of the National Human Resources for the Development of the R & D and Industry Activity will be organised.

Directed by Dr. R. RAMANNA Director BARC.

Assisted by P.K. KRISHNAMURTHI Principal Director of IDEMI

(c) Visits to some selected Government and private Enterprises are scheduled in order to acquaint the participants with the organisation and transfer of IDEMI services to industries, the difficulties encountered by these Enterprises in the productive face, and what has been done to overcome to these difficulties.

AN ADMINISTRATIVE DEVAILS

AND DATE AND PLACE OF THE MEETING

The meeting will be held in Eombay, India from 20 to-25 January, 1985 at the Institute for Design of Electrical Measuring Instruments.

4.2. PARTICIPATION

It is suggested that the participants be Directors or Managers of Industry Research Services Institute (IRSI) or Industrialists interested in Industry-Research Institute Co-operation and who are dealing with Instrumentation, or Government officials responsible for this linkage.

Participation of the representatives from selected countries to the meeting will be financed by UNIDO and the Government of India (IDEMI).

4.3 WIRKING LANGUAGE

The meeting will be conducted in ENGLISH. On a limited basis, facilities will be provided for French and Spanish interpreters.

4.4 REGISTRATION

Each participant should fill in the form for Nomination of Participants (PS-81) attached to the letter distributed by UNIDO to the local UNIDO Resident Representatives. THESE NOMINATION FORMS SHOULD BE RECEIVED BY UNIDO NOT LATER THAN 30TH OF SEPTEMBER 1984.

8.5 PASSFORTS AND VISAS

All participants should to in possession of a valid paraport or similar national identity card, with an entry visa which should be obtained from the Diplomatic Representatives of India in the participant's country.

It is advisable to make visa application, where required, immediately after receiving UNIDO's Latter of Award.

4.6 ACCOMMODATION OF PARTICIPANTS: HOTEL RESERVATIONS

The organising committee of the host country will make arrangements for special price hotel reservations for every participant.

4.7 SOCIAL PROGRAMME

Certain cultural activities are scheduled for all participants:

- Sight-seeing of the city of Bombay
- Elephanta Caves tour
- A folklore performance

4.8. INDUSTRY VISITS

During the meeting industrial enterprise visits will be organised.

4.9 ARRIVAL

Participants in the meeting are expected to arrive in Bembay on 19th of January, 1985.

A Note to the participants will be distributed to the participants after they receive UNIDO's Letter of Award and not later than early December 1984.

4.10 FIVANCIAL AND ADVINISTRATIVE APRAMGEMENTS FOR PARTICIPANTS

Financial arrangements for the participants financed by UNIDO will be in accordance with the established UN Rules and Regulations.

1. UNIDO will provide:

- Round trip economy-class air transportation between the airport of departure in the home country and Bombay airport.
- Daily subsistence allowance for 7 days at the prevailing UN rate equivalent in local currency (Indian Rupee).

2. The Institute (DEII) will provide:

- Local transportation
- All conference facilities (including conference room, interpretation, reproduction of documents needed during the meeting) and secretarial services.

Bel Foreiginancia Government or his employer will be neguined to been the following coates

- = All expenses in the home countryincidental to travel abread, including expenditure for passport, vises, medical examinations, vaccinations and other such miscellaneous items, as well as internal travel to and from the airport of departure in the home country;
- Salary and related allowance for the participants, during the period of Meeting.

4. UNIDO and DFMI will not assume any responsibility for the following expenditures:

- Travel and any other costs incurred due to travel other than by the direct route;
- Travel and any other costs incurred by the dependants who might accompany the participants.
- costs incurred with respect of insurance, medical bills and hospitalization fees in connection with attendance at the Meeting.
- Loss or damage to personal property of participants while attending the Meeting;
- Compensation in the event of death, disablement or illness of participants.

4.11 TRAVEL APRANGEVENTS

Flights will be arranged by Air India wherever possible to follow the most economical direct route. The airplane tickets for the participants will be issued by Air India branch office located in the respective countries. Where there is no Air Irdia airlines service, arrangements for connecting flights will be made to other airlines through Air India only.

Since tickets are issued on restricted currency basis, participants should await formal travel authorisation and should not <u>under any circumstances</u>, purchase their own tickets and such tickets purchased will <u>not</u> be reimbursed by UNIDO. Participants will be contacted by the local airlines through the local office of the UNDP Resident Representative. In countries where no UNDP office exists participants will be contacted at the address listed on the nominations form submitted to UNIDO.

Note: Participants are strongly advised not to have members of their families accompany them as, according to UNIDO's experience, this may cause all kinds of practical difficulties. In any case, the sponsors of the meeting will not be liable for any expenses incurred by these dependents.
