INTRODUCTION

This document is part of a larger research project carried out jointly by ESCAP and UNIDO. The objectives of the project include a review of the current status and an assessment of the future prospects of key sectors, namely the chemical industries, iron and steel and capital goods. The project is focused on specific developing countries in the ESCAP region. In accordance with the terms of reference this document deals with the following countries: Afghanistan, Bangladesh, Burma, Hong Kong, India, Iran, Malaysia, Nepal, Pakistan, Philippines, Republic of Korea, Singapore, Sri Lanka and Thailand. The present document is intended to provide a portion of the statistical material to be utilized in this study.

SOURCES AND METHODS

The basic data used to derive indicators contained in sections I to VI were compiled from information contained in the UNIDO data base. In turn, this data base was created from statistics supplied by the Statistical Office of the United Nations Secretariat and a variety of supplementary sources. The latter sources included national industrial censuses, statistics supplied by national and regional research and statistical institutes, data provided by other international organizations, unpublished data supplied by UNIDO senior industrial development field advisers and estimates by the UNIDO secretariat.

"Manufacturing" includes the industry groups listed in Major Division 3 of the International Standard Industrial Classification (ISIC). The industrial sectors selected for detailed study in this project consist of one or several branches designated by a three-digit ISIC code. These branches are defined as the major group of activities included under the corresponding code in the ISIC. The list of sectors and the codes of component branches associated to them is as follows: chemicals (ISIC 351, 352), petrochemicals (ISIC 353, 354 and 356), iron and steel (ISIC 371), and capital goods (ISIC 382, 383 and 384).

The reader is cautioned against accepting too literally the verbal description of the sectors as their definition in terms of branches does not always allow to segregate activities which are not associated with the kind of activity indicated by the name of the sector. For instance, the capital goods sector contains a number of activities which result in the production of typical consumer goods such as passenger cars or television receivers.

With regard to concepts and methods, several aspects are noted below.

Section I Structure of Manufacturing

The structure of value added at current prices and the structure of employment have been derived directly from the UNIDO Data Base.

In the case of data concerning value added at constant prices, estimates were derived using base weights for 1975 and index numbers of industrial production. Appropriately defined indexes were not always available for a particular industrial branch in a given country although other statistical sources showed evidence of production. In those instances, additional estimates were made by the UNIDO secretariat where sufficient information was available. For example, when index numbers were not available for all 28 industrial branches in a country for an entire year, the structure of value added was estimated using data in national currency at current prices.

The similarity of the structure of manufacturing value added of selected ESCAP countries to Japan, Republic of Korea and United States is measured by the use of an index. This measure is adapted from an index proposed by Finger and Kreinin.^{1/} It is defined by the formula,

$$I(a, b) = \left\{ \sum_i \text{minimum} [S_i(a), S_i(b)] \right\} .100$$

where

S_i is the share of manufacturing value added, in constant prices, of branch i while a and b are the countries being compared. If the branch distribution of manufacturing value added of a and b are identical ($S_i(a) = S_i(b)$ for each i), the index will take on a value of 100. If the structures compared are totally dissimilar (for each $S_i(a) > 0$, $S_i(b) = 0$), and viceversa the index will take on a value of zero.

Section II Branch Characteristics

This section provides information on seven indicators selected to characterize the industrial branches pertaining to the sectors of interest.

^{1/} See J.M. Finger, and M.E. Kreinin, "A measure of export similarity and its possible uses, The Economic Journal, vol. 89, December 1979, pp. 905-912.

With regard to the concepts used,^{1/} value added is defined as the value of gross output less the cost of supplies consumed. Gross output is comprised mainly of the value of all products of the establishment and the net change between the beginning and the end of the reference period in the value of work in progress.

Employees include all persons engaged other than working proprietors, active business partners, unpaid family workers and proprietors. Mean size of establishment is the number of employees divided by the number of establishments. Wages include all payment in cash or in kind made to employees during the reference year in relation to work done for the establishment. Wage-rate is the wages divided by the number of employees.

Section III Production of Selected Commodities

Production, measured in physical units, was compiled with the Yearbook of Industrial Statistics, volume II, various issues. The commodities included are those reported in the above publication which fall within one of the various industries singled out for particular interest in this study. Each commodity is identified by a name and by a six-digit code which enables the reader to obtain a more complete definition by consulting the ISIC.

The data refer to seven years, 1970 and 1975-1980, but only countries for which data were available at least for one year in the period 1975-1980 have been selected.

^{1/} For more details on each of the above concepts, see, United Nations, Yearbook of Industrial Statistics (United Nations publication, Sales No. E.82.XVII.11).

Section IV Apparent Consumption of Selected Commodities

Average annual apparent consumption (C) and the average annual per capita apparent consumption (c) for the period T were calculated as follows:

$$C = \frac{\sum_{i=1}^T C_i}{n} = \frac{\sum_{i=1}^T (O_i - X_i + M_i)}{n}$$

and

$$c = \frac{\sum_{i=1}^T C_i}{\sum_{i=1}^T N_i} = \frac{\sum_{i=1}^T (O_i - X_i + M_i)}{\sum_{i=1}^T N_i}$$

where i = 1970, 1971 and 1972 for T = 1970-1972; i = 1977, 1978 and 1979 for T = 1977-1979.

n = the number of years included in the calculation.

N = population.

O = domestic production in physical units.

X = exports in physical units.

M = imports in physical units.

In the calculations of the production/consumption and import/consumption ratios, estimates of total domestic production, total imports and total apparent consumption over the three year periods were used. In symbols, these ratios, o and m, respectively, are:

$$o = \frac{\sum_{i=1}^T O_i}{\sum_{i=1}^T C_i} \quad \text{and} \quad m = \frac{\sum_{i=1}^T M_i}{\sum_{i=1}^T C_i}$$

In each of the three tables, figures in parenthesis after commodity description are ISIC codes. For further details regarding the definitions of each commodity shown in the tables, see the United Nations, Yearbook of Industrial Statistics, vol.II.

The commodities were selected on the basis of a concordance between ISIC and SITC developed by the UNIDO secretariat. The concordance matched available production data (ISIC 6-digit) with the corresponding trade data (SITC, Revised, 5-digit). Thus 26 chemical products, 6 petrochemical products and 14 iron and steel products were selected. No capital goods were retained

due to the difference in units of measurement between production and trade data. Most of the commodity production data used in the calculations were provided by the United Nations Statistical Office. When the original source did not provide production data for a country for any single year up to 1980, national and international sources available at hand were used to confirm the presumption that the commodity was not produced in the country.

The corresponding trade data employed in the calculation of apparent consumption were also supplied by the Statistical Office. When the original source did not provide both export and import data for any of the years 1970-1980, the partner-country data for trade with OECD countries were used to estimate the imports and exports of the developing country.

Those years in which both import and export data were not available were excluded from the table. Commodities of which the consumption was nil (i.e. no domestic supply and no imports) were also excluded. To reduce the effects of large year-to-year changes in stocks, which are often erratic owing to speculation or export market conditions, three-year averages were calculated whenever possible.

Section V Imports and Exports by Product Group

This section provides information on the value of imports and exports in 1970, 1975 and the latest year for which data are reported.

The data are presented at all available levels of aggregation. A typical table would comprise Divisions (two-digit codes), Groups (three-digit codes), Subgroups (four-digit codes) and Items (five-digit codes) of the SITC plus a total corresponding to the sector. It should be borne in mind that, in order to avoid double-counting, only figures at the same level of aggregation may be summed.

Every effort has been made to present the international trade commodity data (defined by SITC) according to industrial origin (defined by ISIC). Many commodities, however, are typically produced by several industries. Furthermore, even the finest level of disaggregation at which the trade data are reported frequently includes several commodities which may result from two or more distinct kinds of activity. Due to these limitations it has not been possible to perfectly partition the commodities according to their industries of origin.

The definition of capital goods used in the case of industrial origin (ISIC 382, 383 and 384) finds a good match in Section 7, Machinery and Transport Equipment, of the SITC. It has been mentioned above that the definition of capital goods adopted in this paper includes some industries which are not typically engaged in producing capital goods. As a consequence, the trade data matching the definition of the capital goods sector also include commodities which cannot be considered to be of the capital goods kind such as bicycles or electric lamps. The reader should therefore bear in mind that the trade reported under the heading 'Machinery and Transport Equipment' is only a proxy for the trade of capital goods sensu stricto.

Export values are reported f.o.b. Export data for Burma, Hong Kong, India, Pakistan, Republic of Korea, Sri Lanka and Thailand do not include re-exports.

Import values are reported c.i.f.

Section VI Exports by Destination

With regard to exports by destination, the following classification of economic groupings is used in this document: "Developing countries" includes all countries, territories, cities or areas in the Caribbean area, Central and South America, Africa (other than South Africa), West Asia (other than Israel) and South and East Asia (other than Japan). "Developed market economies" includes Canada and the United States of America, Europe (other than Eastern Europe), Australia, Israel, Japan, New Zealand and South Africa. "Centrally

planned economies" includes Bulgaria, Czechoslovakia, German Democratic Republic, Hungary, Poland, Romania and the Union of Soviet Socialist Republics.

Exports by destination are shown only when total exports exceed a value of United States dollars 100,000. Exports reported as "exports to areas not elsewhere specified" have not been included in the regional distribution. This explains why the sum of exports to regions do not always tally with the value of exports to world.

Section VII Miscellaneous

This section presents data related to diverse aspects of economic activity which are not included among the data normally collected by the Statistical Office of the United Nations Secretariat.

The main purpose is to contribute to an assessment of some key sectors. However, material covering the whole manufacturing sector is also provided, particularly with regard to foreign control of industries and the relative role of exports, imports and domestic production.

The countries covered are Indonesia, Malaysia, the Philippines, the Republic of Korea and Thailand.

The sources are mentioned at the bottom of every table. The reader is cautioned against comparing the figures in Section VII with the previous sections as the definitions and methods of measurement used in Section VII may differ from those used for the data collected by the Statistical Office of the United Nations Secretariat.

Notation

Dates divided by a hyphen (1970-1975) indicate the full period involved including the beginning and end years.

In general, three dots (...) indicate that data are not available or are not separately reported. In the case of trade statistics, however, this notation indicates that data are either not available or that trade is non-existent.

Throughout the paper a dash (-) indicates that the amount is nil or negligible.

- a/ Excluding toluene recovered as a by-product from coke-oven plants.
b/ Production by large and medium scale establishments only.
c/ Beginning 1975, ethyl and butyl acetates only. Prior to 1975, ethyl acetate only.
d/ Strength of acid not known.
e/ Production in urban areas only.
f/ Data refer to Peninsular Malaysia only.
g/ Excluding quantities consumed by fertilizer industry.
h/ Including water paints and cellulose paints.
i/ Incomplete coverage.
j/ Including washing powder and detergents (ISIC 352304).

- a/ Ferro-manganese only.
- b/ Including foundry pig iron.
- c/ Except in 1970, including foundry pig iron.
- d/ Ferro-silicon only.
- e/ Including crude steel, ingots (ISIC 371019).
- f/ Source: International Iron and Steel Institute, Steel Statistical Yearbook, Brussels 1982.
- g/ Including crude steel for casting.
- h/ Including wire rods (ISIC 371028).
- i/ Including medium plates 3 to 4.75mm thick (ISIC 371043).
- j/ Production by large and medium scale establishments only.

Production of plastic products by type of raw material in the Republic of Korea, 1974-1979

(Unit: M/T)

Products Year	PVC Processed Products	HDPE Processed Productst	LDPE Processed Products	PP Processed Products	PS Processed Products	Total
1974	94,749 (37.6)	13,332 (5.3)	74,682 (29.6)	55,778 (22.1)	13,724 (5.4)	252,265 (100.0)
1975	129,251	14,389	73,358	73,906	17,713	308,617
1976	190,062	26,279	85,881	91,303	28,362	421,887
1977	225,600	33,652	128,900	117,676	42,563	548,391
1978	306,146	57,052	154,372	125,062	65,710	708,342
1979	337,777 (43.2)	63,284 (8.1)	158,363 (20.3)	141,386 (18.1)	80,204 (10.3)	781,014 (100.0)
Annual Average Increase Rate(%)	28.9	36.5	16.2	20.4	42.3	25.4

Source: Hong Young Pyo et al, Comparative Advantage of Iron and Steel and Petro-chemical and Plastic Products Industries in Korea (Tokyo, Institute of Developing Economies, 1981) table 2-23.

Note: PVC = Polyvinyl chloride
 HDPE = High density polyethylene
 LDPE = Low density polyethylene
 PP = Polypropylene
 PS = Polystyrene

Production of Plastic Products by Type of Processing, Republic of Korea, 1974-1979

(Unit: M/T)

	1974	1975	1976	1977	1978	1979	Annual Average In- crease Rate
Injection & Compression molding Products	77,262 (27.8)	103,239	170,955	205,425	288,354	337,493 (39.8)	34.3
Thermo-plastic Resin	52,231 (18.8)	71,576	127,672	149,162	229,503	271,907 (32.1)	39.1
Thermo-setting Resin	25,031 (9.0)	31,663	43,283	56,263	58,851	65,586 (7.7)	21.2
Extrusion Molding Products	180,289 (57.8)	179,062	230,547	284,067	334,337	337,540 (39.9)	16.1
Hollow-forming and Stretched Products	37,151 (13.4)	43,245	53,069	97,065	119,000	139,860 (16.5)	30.4
Foam Molding Products	2,594 (0.9)	8,734	10,593	18,097	25,502	32,035 (3.9)	65.3
Total	277,296 (100.0)	340,280	465,170	604,654	767,193	846,928 (100.0)	25.0

Polymer Production Capacity in Thailand, 1980

Year production started	Product	No. producers	Capacity/year
1968	PVC resin	1	PVC resin 1978 25,000 tons
			PVC compound 1980 50,000 tons
	PVC compound		PVC compound 1978 18,000 tons
			1980 24,000 tons
1970	PVAc latex & dispersion	2*	1980 - 15,300 tons
1975	Plasticisers (DOP, DBP, DIBP)	1	1978 - 25,221 tons
	Urea formaldehyde resin		
	Phenol formaldehyde resin		
	Formaldehyde		
1975	Unsaturated polyester resin, melamine	1	1980 - 10,080 tons
	coating resin, alkyd		
	coating resin, textile		
	finishing resin		
1978	Polystyrene, general purpose & high impact	1	1978 - 15,000 tons 1980/81 - 22,500 tons
	Liquid PVC & adhesive	1	1980 - 360 tons

* One producer also produces unsaturated polyester resin, its annual capacity is 3,000 tons

Note: PVC - Polyvinyl chloride
 PVA - Polyvinyl acetate
 DOP - Di-octyl phthalate
 DBP - Di-butyl phthalate
 DIBP- Di-iso-butyl phthalate

THAILAND: Contribution to the growth of domestic production, 1960-1978

(percentage increase over the period)

Sources of growth	1960/66	1966/72	1972/75	1975/78
Domestic demand	88.9	64.1	91.0	79.5
Import substitution	-13.6	29.4	0.5	-7.7
Export expansion	24.7	6.5	8.5	28.2

Akrasanee, "Import Substitution, Export Expansion and Sources of Industrial Growth in Thailand, 1960-1972"; Puey Ungphakorn, "Finance Trade and Economic Development in Thailand", Sampong Press, Bangkok 1975; N. Akrasanee, "Industrial Development in Thailand" (unpublished report obtained from the Industrial Financial Corporation of Thailand, Bangkok, 1980); World Bank, "Industrial Development Strategy in Thailand" (unpublished report), April 1980, as cited in "Les perspectives d'industrialisation des pays du Sud-Est asiatique", Institut d'étude des pays en développement, University of Louvain, Belgium, vol. I, March 1982, p.96.

THAILAND: Shares of exports and imports in domestic production by branch of manufacturing, 1975-1978
(percentage)

Branch	Export/Domestic production		Imports/Domestic production	
	1975	1978	1975	1978
Processed food	22.0	29.8	1.6	2.5
Beverages and tobacco	-	-	1.4	2.2
Textiles	10.0	17.9	12.7	10.2
Wearing apparel		14.2		
Products of leather	7.0	67.2	2.3	2.6
Footwear		2.7		
Furniture	13.8	4.3	1.4	6.5
Wood products		17.8		
Paper and paper products printing and publishing	1.5	1.5	24.8	26.5
Chemical products	3.1	1.8	66.0	83.0
Rubber and plastic products	79.2	60.7	13.2	6.9
Non metallic mineral products	10.5	3.7	9.5	10.7
Basic metals	21.9	4.9	59.9	54.5
Non-ferrous metals		51.3		
Metal products	7.5	6.6	206.1	173.0
Machinery		5.7		
Electrical machinery and apparatus	0.2	29.6	49.4	35.2
Transport equipment		0.4		
Professional goods and other industries	23.2	31.7	31.2	46.6
Total manufacturing	15.0	19.7	23.4	25.6
