INTRODUCTION TO UGIL AND TUMPECO TECHNICAL ASSISTANCE GIVEN BY IMAS CHAPTER 1.0.

INTRODUCTION

FINAL REPORT ON
TECHNICAL ASSISTANCE GIVEN TO
UNITED GARMENT INDUSTRY LIMITED
AND THE UGANDA METAL PRODUCTS
AND ENAMELLING COMPANY_LIMITED

1.0. INTRODUCTION

1.1. ORGANIZATION OF FINAL REPORT

- 1.1.1. This Final Report on the Technical Assistance given by IMAS to United Garment Industry Limited (UGIL) and The Uganda Metal Products and Enamelling Company Limited (TUMPECO) is made up of three main parts.
- 1.1.2. PART (I) of the Final Report comprises an Introduction which covers the detailed organization of the Final Report and also gives some background information on the Technical Assistance Contract under which the Final Report was prepared.
- 1.1.3. In addition, Part (I) of the Final Report ends with an Acknowledgement of assistance given to the Consultants of IMAS who rendered the Technical Assistance.
- 1.1.4. In PART (II) of the Final Report, a Summary of the Main Recommendations on UGIL is given. This is followed by a brief history of UGIL together with details of the shareholding structure of the Company.
- 1.1.5. In addition, the present state of the Company's operations is reported on in Part (II) of the Final Report together with details of the main problems facing UGIL.

- 1.1.6. Part (II) of the Final Report ends with details of the technical assistance rendered by IMAS Consultants to UGIL in Corporate Planning, Finance and Accounting and Marketing the light of the problems facing UGIL and details of recommendations of the Consultants.
- 1.1.7. In PART (III) of the Final Report, a Summary of the Main Recommendations on TUMPECO is given. This is followed by a brief background report on TUMPECO together with details of the shareholding structure of the Company.
- 1.1.8. The present state of the Company's operations is also reported on in Part (III) of the Final Report together with details of the main problems facing TUMPECO.
- 1.1.9. Part (III) of the Final Report ends with details of the technical angletance given to TUMPECO by IMAS Consultants as a result of the problems facing the Company in Management, Finance and Marketing together with details of recommendations of the Consultants.

1.2. BACKGROUND OF TECHNICAL ASSISTANCE CONTRACT

1.2.1. Since 1970, performance of the Public Industrial Enterprises Sector in Uganda has been characterized by low capacity utilization (between 10-25% in most cases), lack of an integrated system of planning, budgeting, costing, management information, controlling and steering of the Public Industrial Enterprises, absence of aggressive marketing strategies and low productivity.

- 1.2.2. In order to reverse the situation, a recovery programme was launched in 1982. As part of the recovery programme in 1990, selected Public Industrial Enterprises were management audited with a view to recommending among other things, steps to increase efficiency, production capacity, productivity and control of the affected enterprises.
- 1.2.3. The Management Audit Reports recommended that general management training required in the enterprises would be better performed through on-the-job training given by highly experienced external consultants to guide Managers of the Public Industrial Enterprises.
- 1.2.4. Consultants of the Industrial and Management Services
 Limited (IMAS) therefore rendered technical assistance to
 the United Garment Industry Limited (UGIL) and The Uganda
 Metal Products and Enamelling Company Limited (TUMPECO)
 from the 18th May, 1992 to 23rd June, 1992. The
 programmes followed by the IMAS Consultants are shown in
 Appendices 1 to 3.
- 1.2.5. The Technical Assistance was expected to provide on-thesite advice and on-the-job training by
 - analyzing specific deficiencies in the two Companies
 - developing a co-ordinated strategy to overcome the deficiencies
 - advising and guiding hand-in-hand staff of the two Companies with regard to the strategies to be adopted and implemented to overcome the problems and
 - working to co-ordinate solutions and training programmes to be instituted in the two Companies.

1.2.6. The Technical Assistance rendered by IMAS Consultants was to be in the areas of

general management, including corporate planning and strategy marketing and distribution

financial management and accounting.

ACKNOWLEDGEMENTS 1.3.

IMAS would like to express their deepest gratitude to the General Managers and staff of UGIL and TUMPECO as well as the Director, C.T.A and staff of PIES, without whose assistance the Technical Assistance Programme would not have been possible.

PART II

SUMMARY OF MAIN RECOMMENDATIONS,
DETAILS OF ASSISTANCE ON
CORPORATE PLANNING, FINANCE AND
ACCOUNTING AND MARKETING
ON UGIL

CHAPTER 2.0. SUMMARY OF MAIN RECOMMENDATIONS

2.0. SUMMARY OF MAIN RECOMMENDATIONS

2.1. ORGANIZATION STRUCTURE

There are a lot of one-to-one reporting relationships in the Present Organization Structure of UGIL.

A re-organization of the Organization Structure of UGIL to remove the one-to-one reporting relationships as well as improve the overall effectiveness and efficiency of operations is highly recommended.

Towards this end, the following re-organization of departments in the Company is recommended.

2.1.1. Production Department

Due to the wide span of control of the Production Manager who supervises the work of eight Plant Managers, it is recommended that the quality control and designing functions should be re-assigned to a new department, the ENGINEERING AND PRODUCTION SERVICES DEPARTMENT.

2.1.2. Engineering and Production Services Department

It is recommended that a new department should be created to handle quality control, designing, product research and development, work study, purchasing, material requirements planning as well as production planning and control. This department is to be called the ENGINEERING AND PRODUCTION SERVICES DEPARTMENT.

2.1.3. Marketing Department

The Marketing Department is to be re-organised into three sections which will be responsible for Sales (Kampala area and upcountry), Marketing Services (Research, Sales Planning and Control, Advertising and Promotion) and Exports.

2.1.4. Accounting Department

It is recommended that the Accounts Department should be re-organised into three sections to handle the functions of financial accounting, cost accounting and planning, budgeting and management information.

The creation of the Planning, Budgeting and Management Information Section will facilitate the preparation of management information reports after analysis of variances from planned targets thus making it possible for management to steer the Company's operations towards achievement of its goals.

2.1.5. Internal Audit Department

The Internal Audit Department should be re-organised and a more experienced and suitably qualified person appointed to head the Department as INTERNAL AUDIT MANAGER.

The Department should be re-organized into two main sections to undertake the functions of pre- and post-auditing of transactions as well as internal control systems review and investigation of fraud cases.

2.1.6. Personnel Department

The Personnel Department should be reorganized into two sections with responsibility for the personnel and administrative functions within the department.

It is recommended that the Department should be redesignated as the PERSONNEL AND ADMINISTRATION DEPARTMENT.

It is recommended that the Personnel and Administrative Manager should be assisted by two Officers, one of whom will be responsible for personnel matters while the other handles administrative matters.

2.2. HUMAN RESOURCES MANAGEMENT

2.2.1. Confirmation

A Pre-Confirmation Check List is recommended to be introduced to guide the Personnel Records Clerk to ensure that all necessary requirements in terms of personnel records have been fully satisfied prior to arranging for new staff to be confirmed as permanent employees.

2.2.2. Grading of Staff

A new job grading system is to be introduced after a job evaluation exercise covering all jobs in the Company to ensure that job grades are uniform intra-departmentally as well as inter-departmentally.

2.2.3. Manpower Training and Development

It is recommended that on-the-job training programmes should be drawn up for employees in various sections of the Company and their response to such training monitored through use of a new on-the-job Training Progress Report Form.

External training courses and vestibule sessions organized internally should be arranged for employees of the Company to help remove "training gaps" that become apparent as a result of the monitoring of employees responses to on-the-job training.

Evaluation of Work Performance and Conduct of Employees

It is recommended that an employee performance and conduct evaluation system should be introduced under which the work performance and conduct of employees is monitored continuously throughout the year and employees assisted to improve upon their areas of weak assessment.

Towards this end, an appraisal system based upon management by objectives should be introduced.

An Objectives Form, a Critical Incidents Form and an Employee Performance Evaluation Form are to be introduced for use in appraising the work performance and conduct of all staff.

2.2.5. Corporate Planning

It is recommended that detailed action programmes that must be followed by various departments of the Company in order for it to achieve its long term goals should be prepared with specific time targets for completing various tasks.

In this regard, it is recommended that the detailed action programmes suggested by the Consultants in this report should form the basis of current and future action programmes.

The Corporate Plan should form the basis of preparing short-term development plans for the Company.

CHAPTER 3.0.

COMPANY BACKGROUND

3.0. COMPANY BACKGROUND

3.1. **OWNERSHIP**

The United Garment Industry Limited (UGIL) was incorporated in 1964 as a joint venture between Uganda Development Corporation (UDC), two Japanese Companies, Yamato International and Marubeni Corporation and the United Commercial Agencies. The composition of shareholding and other shareholding details are as follows:-

Authorised Number of Shares	200,000

3.2. TYPE OF BUSINESS AND MISSION OF UGIL

3.2.1. The United Garment Industry Limited is a Garment Manufacturing Company which produces Shirts, Trousers, Suits, Knitted Wear including T-Shirts and Briefs as well as Uniforms for schools and the Uganda Army.

- 3.2.2. The Company regards itself as being in the garment and yarn industries. The Company's products and markets are in:-
 - high quality fashion apparel of knitted products such as T-shirts, polo shirts, briefs and knickers for export to Europe the United States of America and Canada.
 - fine quality yarn for export
 - medium quality knitted woven wear for the local market such as Tshirts, underwear, sports wear and nappies.
 - woven garments for local markets such as shirts, trousers, shorts, army and school uniforms.
- 3.2.3. The long term goal of **UGIL** as stated by its management is to achieve profitability for the Company to be self sustaining, that is, to generate internal funds to achieve a financially healthy position.*

PRESENT STATE OF UGIL BUSINESS

3.3.1. Organization Structure

The Organization Chart of UGIL at the beginning of IMAS Technical Assistance is shown in Appendix 4.

The Organization Chart is characterized by poor interface between functions which complement each other. For example, there is a poor interface between production and the purchase of raw materials as well as between production and physical custody of raw materials.

 FOOTNOTE: UGIL STRATEGIC PLAN DEVELOPED WITH PIES/UNDO ASSISTANCE, 22ND TO 23RD NOVEMBER, 1991 In addition, the effectiveness of important functions such as marketing of the Company's products is hampered by an inadequately developed organization structure in the Marketing Department.

By placing the physical custody of raw materials for production under the Marketing Department, the Marketing Manager's attention has to be focused not only on his main function of marketing but also on the warehousing and issue of raw materials for production.

The Department is therefore prevented from fully concentrating on the critical aspects of marketing such as selling, distribution, research, sales promotion, advertising and pricing.

The structure of most departments including the Marketing, Accounts and Engineering Departments are characterized by one-to-one reporting relationships. The one-to-one reporting relationships tend to make affected officers/positions virtually redundant as they merely pass documents/reports/memoranda/decisions up or down between their superior officers and their immediate subordinates.

There is a mixture of position titles and grade titles in the designation of various positions which appear on the Organization Chart resulting in inconsistency in designation of positions. Finally, important industrial engineering functions such as Research and Development of Products, Work Study and Methods Review, Production Planning and Control, Maintenance Planning and Control, Material Requirements planning and Quality Control have been given a low profile, organizationally.

With a view to removing the weaknesses inherent in the present organizational framework, which adversely affects overall effectiveness and efficiency, a number of changes in the organization structure were proposed, discussed with the management of UGIL and agreement, in principle, reached on implementation of the proposed changes.

These changes, which are shown in the Proposed Departmental Organization Charts in Appendices 5(a) to 5(g) are dotailed below.

3.3.2. Production Department

A good interface between production and physical custody of raw materials for production is ensured through placing the Raw Materials Store under the Production Manager.

It is felt that quality control within the Company could be improved by giving the quality control function greater independence to review and comment on the quality of both products produced and maintenance schemes used within the Company.

In order to enhance the effectiveness of the quality control function, quality control has been removed from the Production Department and placed under the new Production and Engineering Services Department.

3.3.3. Production and Engineering Services Department

In the Proposed Organization Structure, functions which are considered vital to the successful achievement of the objectives of UGIL in the production area such as quality control, research and development of new products, production planning and control, maintenance planning and control, work study and methods review, material requirements planning and purchasing have been placed under a new department, the Production and Engineering Services Department.

The critical purchases within the Company are those made for the Production Department and therefore the officer responsible for purchasing must, preferably, be placed under the control of a manager with a technical background.

Due to the need to improve internal checks and control, the key activities involved in the procurement of inputs such as ordering, payment authorization, payment and physical custody of items purchased have been separated and placed under different departments/sections. As a result, all activities associated with ordering of inputs, follow-up of orders and clearing of goods ordered on arrival have been made the responsibility of the Purchasing Officer who is to report to the Head of the Production and Engineering Services Department.

3.3.4. Marketing Department

A major weakress of the marketing function at UGIL is the low profile given to marketing services such as sales planning and control, market research, sales promotion and advertising.

In the Proposed Organization Structure therefore, the existing one-to-one reporting relationships are removed by creating two sections within the Marketing Department to handle selling/distribution of products and marketing services.

Furthermore, all activities which are not directly related to the marketing function such as those related to the physical custody of raw materials and inputs for production have been removed from the list of responsibilities of the Marketing Manager with the Raw Materials and Inputs Storekeeper placed under the Production and Engineering Services Manager.

With regard to marketing activities, a position of Marketing Services Officer has been created to handle such services as Sales Planning and Control, Market Research and Sales Promotion/Advertising.

3.3.5. Finance and Accounts Department

A number of one-to-one reporting relationships within this department have been removed in the Proposed Organization Structure of the Finance and Accounts Department.

In addition, the position of Senior Statistician (a grade title) is to be redesignated as Planning, Budgeting and Management Information Officer and made responsible for duties such as planning, budgeting, variance analysis and writing of management information reports.

Under the Proposed Organization Structure therefore, there would be three sections within the Financial and Accounts Department responsible for Financial Accounting, Cost Accounting and Planning, Budgeting/Management Information.

Finally, the position of Chief Accountant (a grade title) should be redesignated as Finance and Accounts Manager.

3.3.6. Internal Audit Department

The Internal Audit Department has hitherto been given a low profile organizationally.

It is therefore recommended that the department should be strengthened and headed by an Internal Audit Manager.

In addition to the traditional internal auditing functions of pre- and post-auditing of transactions, it is recommended that the Internal Audit Department should also undertake systems audit to ensure that internal control, internal checks and balances within UGIL are enhanced and various management information reports are prepared as well as submitted to management on time.

Two sections are therefore to be created in the department with responsibilities for Internal Control Systems and Investigations as well as Pre- and Post-Auditing.

3.3.7. Personnel Department

The Personnel Department handles all personnel matters as well as administrative matters of the Company.

It is therefore recommended that the department should be redesignated as the Personnel and Administration Department.

Furthermore, it is necessary for all personnel matters to be separated from administrative matters within the department and different officers assigned to handle the personnel and administrative functions within the department.

The personnel function is expected to be handled by a Personnel Officer while an Administrative Officer is expected to handle the Company's administrative matters.

Personnel matters expected to be handled by the Personnel Section of the department include recruitment, wages/salaries administration, personnel records management, manpower training and development, appraisal of staff performance, industrial relations, discipline of staff and welfare.

Administrative matters expected to be handled by the Administrative Section of the department include office cleaning, transport, security, protocol, public relations, general administration including secretarial and clerical services and other general services.

3.3.8. Engineering Department

The Engineering Department is characterized by one-to-one reporting relationships.

All one-to-one reporting relationships within the department have been removed through the creation of three sections which are expected to handle all mechanical engineering, electrical engineering and civil/estate maintenance functions in the Company.

The department should be strengthened through training of staff in the department to improve their knowledge and skills.

The Head of Department's designation should be changed from Chief Engineer (a grade title) to Engineering Manager (a position title).

3.4. STAFF STRENGTH

The United Garments Industry Limited employed 454 members of staff at the time of the IMAS Technical Assistance Programme. Out of the total staff complement of 454, 328 members of staff were directly engaged within the Production Department while the remaining 126 were engaged in other departments which render support services to the Production Department.

An analysis of the indirect staff complement showed that a total of 45 employees were engaged within the Personnel and Administration Department while 18 employees were engaged within the Accounts Department. Inspite of the reduction in the number of staff in the Company in the last quarter of 1991, it is recommended that additional reductions in the number of employees especially those engaged in the above-mentioned two departments should be seriously considered.

It is the view of IMAS that the total number of employees engaged in the above-mentioned two departments can be reduced by ten (10) (ie. two from the Accounts Department and eight (8) from the Personnel and Administration Department).

In view of the anticipated increase in the level of capacity utilization by the Company between 1993 to 1995 and beyond, no additional reduction in the number of employees of the Company is recommended.

3.5. HUMAN RESOURCES MANAGEMENT

The human resources management function at UGIL was observed to be generally satisfactory. However, improvements have to be made in job grading, recruitment procedures, performance appraisal and training schemes for staff.

Consequently, technical assistance and guidance was provided by IMAS to enable the Personnel/ Administration Manager and the Personnel Officer improve upon the above mentioned areas of weakness.

During the IMAS Technical Assistance Programme, it was observed that there was a very high turnover of skilled staff of UGIL. For example, 12% of employees in this category left the service of UGIL in 1991/92 (i.e. July to May).

Reasons for this high rate of turnover of skilled employees include low morale arising from low salaries, lack of training and absence of employee performance evaluation.

It was observed that no comprehensive personnel programme covering recruitment, training and manpower development, wages and salaries administration, staff performance appraisal, industrial relations and welfare was followed on a consistent basis by the Company.

Thus employees could not easily link achievement of the Company's goals and objectives to the attainment of their own personal objectives.

The need for the Company to implement a more comprehensive personnel programme was therefore stressed. Specific areas of deficiencies which were identified together with details of technical assistance given to staff in the Personnel/Administration Department at UGIL are as follows:-

Local Lob Grading System

The grading of jobs in UGIL was observed not to be comprehensive enough. It was therefore not possible for job grades in various departments of the Company to be compared for the purpose of determining salaries of employees undertaking the affected jobs. There was thus no uniformity and consistency in the grading of staff both intra-departmentally and inter-departmentally.

Assistance was therefore given by IMAS to the Personnel/Administration Manager of UGIL to develop a job grading system that would help to remove the deficiencies that are inherent in the UGIL job grading system.

The main objective of the Technical Assistance given to UGIL was to ensure that a comprehensive job grading system was introduced, which made it possible to compare job grades within departments of the Company as well as between various departments of the Company.

The proposed job grading system is shown in Appendix 6.

とうことなるないとこと

3.5.2. Manpower Training and Development

The main weakness observed at UGIL in the area of manpower training and development was the fact that no structured training programmes were prepared for staff of UGIL to follow.

The only training given to staff on-the-job was not structured to ensure proper career development and increase in productivity.

Furthermore, off-the-job training courses which were arranged for employees of UGIL were selected on an ad-hoc basis and were not selected to fill any previously identified training gaps in employees response to on-the-job training programmes.

Another weakness was that over any period of time, the Personnel/Administration Manager had no means of knowing the sort of on-the-job training being given to staff in various departments of the Company.

With a view to removing these weaknesses, the IMAS Consultant assisted the Personnel/Administration Manager of UGIL to design an On-The-Job Training Progress Report Form which is to be sent to other Heads of Department from time to time for them to give Progress Reports on the training programmes being followed by staff in their departments. (Please see Appendix 7 for a copy of the On-The-Job Training Progress Report Form).

In addition, the need for employees of UGIL to be made to go through structured training programmes to enable them acquire new knowledge as well as improve their skills and thereby help to increase their productivity was emphasized.

3.5.3. Appraisal of Performance of Staff

Even though the performance of employees at UGIL was evaluated at the end of each financial year, the appraisal system used was characterized by subjectivity and performance of staff was not continuously monitored throughout the year.

As a result of the absence of an objective performance evaluation system in the Company, staff could not readily associate achievement of the Company's objectives with attainment of their own personal objectives.

Furthermore, employees of **UGIL** could not easily link increases in their productivity with corresponding increases in their remuneration.

Technical assistance given by IMAS in the area of appraisal of employee performance was therefore aimed at introducing objectivity into the appraisal process and making the process continuous (ie. one that goes on throughout the year) and based upon a system of Management By Objectives (MBO).

The performance evaluation system designed by UGIL with assistance by IMAS consists of a Staff Performance Evaluation Form which would be completed on an annual basis, at the end of each financial year, and is supported by an Objectives Form that specifies targets for employees to achieve by the end of specific periods. It also includes a Critical Incidents Form, which is to be completed quarterly during the year by all Heads of Department in respect of the work of all staff in their departments.

The Critical Incidents Form is expected to list all the positive achievements of staff as well as the negative incidents they have been involved in during the quarter under review with recommendations for the employee to improve upon his/her areas of weak assessment, which have led to negative critical incidents recorded against him or her.

The Staff Performance Evaluation Form, Objectives Form and the Critical Incidents Form are shown in Appendices 8 to 10.

It is expected that introduction of the new Employee Performance Evaluation Forms would introduce greater objectivity into the appraisal of the performance of employees at UGIL as well as help to let employees see the linkage between excellent performance on the one hand, and recognition by the Company through such means as upgrading, promotion, cash awards and bonuses on the other.

3.6. CAPACITY UTILIZATION

The United Garments Industry Limited (UGIL) had seven (7) main production plants with the following capacities at the time of the IMAS Technical Assistance Programme.

	PLANT	<u>INSTALLED</u> CAPACITY	ACHIEVABLE CAPACITY ZATION	CURRENT ACTUAL CAPACITY UTILI- LEVEL
i	Spinning	17-5 Tonnes Month (30)	14 TonnewM	10 Tonnes/Month
		18 0 Timnes/Month (207 - 307 and 407)	15-3 Tounes/M	
?	k milling	(6)(00) Kg. Per Month	12,000 Kg/M	8,500 Kg/M
1	Dyc Rosse	24 000 Kg. Per Month	18,150 Kg/M	8,000 Kg/M
1	CMT	Jon) (an) Pieces/Month	75,000 Pcs/M	80,(xa) Pcs/M
•	Shute	It is no the ent Month	4,250 Pcs/M	6,400 Pcs/M
٨	Limiters	5,000 DecesiMonth	I OOD POSIM	2,340 Per/M
7	Printing	15,000 Pieces Month	11,250 Po/M	7,923 Pcs/M

An analysis of the bottlenecks that would affect achievement of the above stated capacity utilization levels was made in terms of the following bottlenecks:-

- (i) Working capital tied up by the items produced in each plant.
- (ii) Machine hours used up during the production of each item in each of the six shops at <u>UGIL</u>.
- (iii) Labour cost associated with the production of each item in each of the seven plants of UGIL.

The analysis showed that working capital tied up by some products of UGIL before the capital locked up in them was converted through sales into cash as well as obtaining sufficient working capital to cover the cost of production inputs were the most critical bottlenecks.

Another bottleneck was the low capacity utilization which made it impossible to meet potential export orders.

In view of the main bottleneck posed by working capital, production of items which tie up less working capital and turn over quickly in terms of sales as well as provide attractive contribution margins is to be emphasized in determining the Company's product mix.

In view of the foregoing, it was decided by the Management of UGIL to produce at the levels shown below as well as set for the Company an objective of attaining the practical capacity utilization levels by the end of a four-year target period (1993 - 1995) as follows:-

PERIOD	PLANT	PROJECTED CAPACITY UTILIZATION LEVEL
January to June, 1993	Spinning	14 Tonnes/Month
- do -	Knitting	12 Kg/Month
- do -	Dye~House	18.15 Kg/Month
- do -	CMT	75,000 Pcs/Month
- do -	Shirts	8,250 Pcs/Month
- do -	Trousers	5,000 Pcs/Month
- do -	Printing	15,000 Pcs/Month
July to December, 1993	Spinning	30 Tonnes/Month
- do -	Knitting	18 Kg/Month
- do -	Dye-House	27.21 Kg/Honth
- do -	CHT	75,000 Pcs/Month
- do -	Shirts	8,250 Pcs/Month
- do -	Trousers	5,000 Pcs/Month
- do -	Printing	15,000 Pcs/Month
January to December, 1994	Spinning	35 Tonnes/Month
- do -	Knitting	21 Kg/Month
- do -	Dye-House	31.7 Kg/Month
- do -	CMT	75,000 Pcs/Month
- do -	Shirts	8,250 Pcs/Month
- do -	Trousers	5,000 Pcs/Month
- do -	Printing	15,000 Pcs/Month

PERIOD	PLANT	PROJECTED CAPACITY UTILIZATION LEVEL
January to December, 1995	Spinning	40 Tonnes/Month
- do -	Knitting	24 Kg/Month
- do -	Dve-Kouse	36.35 Kg/Month
- do -	CMT	75,000 Pcs/Month
- do -	Shirts	8,250 Pcs/Month
- do -	Trousers	5,000 Pcs/Month
- do -	Printing	15,000 Pcs/Month

On the basis of the projected levels of capacity utilization during the period 1993 to 1995 as shown above, the raw materials and other inputs which will be required for production at the projected levels are shown in the Bill of Materials in Appendix 11.

In order to help achieve the projected levels of capacity utilization, the Management of UGIL intends to embark on a restructuring of the Company to enhance its overall effectiveness and efficiency in meeting the projected levels of output.

In addition, the following strategies and action programmes are to be followed by UGIL during the period 1993 to 1995.

3.7. **CORPORATE PLANNING**

The following strategies was agreed to be followed by various departments of the Company.

3.7.1. Strategies to be followed by the Marketing Department of UGIL

- (a) Undertake market research with a view to advising on appropriate quality standards, customer design preferences, prices, effectiveness of advertising and sales promotion measures.
- (b) Undertake sales promotion to sell more of the Company's products.
- (c) Advertise to reach specific target markets and monitor results.
- (d) Open new distribution channels and evaluate their effectiveness in terms of promoting sales and reducing distribution costs.
- (e) Pricing advise General Manager on pricing policy.
- (f) Improve customer service by prompt delivery of orders.
- (g) Improve mobility of salesmen/representatives.
- (h) Re-organise Marketing Department.
- (i) Determine sales-mix for optimum results.
- (j) Promote branding
- (k) Train Salesmen
- (1) Strengthen export drive
- (m) Analyze sales results and undertake sales planning/ control.
- (n) Review the performance of all **UGIL** sales depots and close down all depots which are not profitable to run.

くない

3.7.2. Strategies to be Followed by the Production Department

- (a) Meet projected capacity utilization levels by ensuring uninterrupted production.
- (b) Ensure adequate stocks of production inputs
- (c) Prepare bill of materials on inputs required for production.
- (d) Install standby generator.
- (e) Improve productivity of production staff by enhancing efficiency through training of staff and introduction of productivity based incentive schemes.
- (f) Instill cost consciousness in all production staff.
- (g) Undertake cost reduction measures.
- (h) Improve quality.
- (i) Establish production targets and monitor results.
- (j) Re-schedule production lost through interruptions of power and breakdowns.

3.7.3. Strategies to be Followed by the Accounts Department

- (a) Modernise Accounting System through introduction of an integrated planning, budgeting, costing and reporting management information system based upon computerization.
- (b) Secure rescheduling of existing loans and re-financing of existing loans on more favourable terms.
- (c) Strictly stick to rescheduled or refinanced loan repayment terms.
- (d) Arrange improvement of asset/loan ratio through revaluing assets and creation of capital reserves.
- (e) Improve budgeting system.
- (f) Improve costing system.

- (g) Improve reporting and controlling systems.
- (h) Improve financial planning including working capital management.
- (i) Lobby for lower taxes and an increase in float on tax payments.

3.7.4. Strategies to be Followed by the Personnel and Administration Department

- (a) Improve job satisfaction through:-
 - improved welfare facilities
 - productivity based incentive schemes
 - improved service conditions
 - job evaluation and grading
 - motivate staff through an objective staff performance appraisal system
- (b) Re-organise various departments of Company as will be approved by UGIL Board.
- (c) Liaise with other Heads of Department and design structured staff training programmes including induction programmes for new employees.
- (d) Prepare a staff/organization manual.
- (e) Ensure more effective and efficient administrative support systems.
- (f) Reinforce security of the Company's assets.

3.7.5. Strategies to be Followed by the Production and Engineering Services Department

- (a) Secure production and other inputs on time by undertaking material requirements planning and arranging purchasing in economic lots on time.
- (b) Monitor quality of products and introduce schemes to improve quality.
- (c) Monitor designs and introduce new designs based upon market research.

- (d) Undertake production and maintenance planning/control to enhance efficiency.
- (e) Undertake product/process research and development of work methods/procedures.

3.7.6. Strategies to be Followed by the Engineering Department

- (a) Ensure uninterrupted machine availability for production.
- (b) Prepare and implement planned/preventive maintenance schemes.
- (c) Reduce machine downtime by improving breakdown repair times.
- (d) Liaise with Production and Engineering Services
 Department for purchase of required spare parts on time.

3.7.7. Strategies to be Followed by the Internal Audit Department

- (a) Design Internal Control Questionnaires covering all facets of the Company's operations.
- (b) Test-check all present systems of internal control and submit recommendations for their improvement.
- (c) Review all procedures and management systems to ensure they contribute to optimization of effectiveness and efficiency.
- (d) Monitor integrated planning, budgeting, costing, reporting and control systems to ensure that management reports that are expected to be submitted under the system are infact submitted on time and corrective follow-up action is taken on time.

- (e) Undertake pre-auditing of all petty cash, cash disbursements, payments by cash or cheque for inputs, spares, stationery and all other materials.
- (f) Undertake post-auditing of all transactions.
- (g) Undertake investigations of fraud and other cases as and when necessary.

3.7.8. Strategies to be Followed by the General Manager's Office

- (a) Oversee preparation and review of the Company's Corporate Plan from time to time.
- (b) Arrange for each revised Corporate Plan to be approved by the Board of Directors.
- (c) Oversee preparation of the Company's Annual Budgets which should be based on the Company's Corporate Plan.
- (d) Tackle under-capitalization of Company by lobbying shareholders to inject new equity into the Company or permit the floating of shares to new shareholders.
- (e) Lobby EADB and other creditor Banks to reschedule or refinance the Company's loans.
- (f) Follow-up export contracts to ensure firm export contracts are executed.
- (g) Lobby Ministry to ensure dumping of second-hand clothes is reduced.
- (h) Ensure financial planning and control is strictly undertaken and followed by the Company.
- (i) Oversee re-organization of Company's Organization Structure after approval of proposed changes by the Board.
- (j) Chair monthly management meetings to review management information reports.

- (k) Review prices at which raw materials and other inputs are purchased on a regular basis.
- (1) Review prices of finished products from time to time.
- (m) Review sales performance reports from time to time.
- (n) Review the performance of Heads of Department.

3.8. **DETAILED ACTION PROGRAMMES**

Detailed action programmes that IMAS recommends should be followed by various Sections/Departments of UGIL during the period 1993 to 1995 are shown in Appendices 12 to 19 for the guidance of Heads of Department.

CHAPTER 4.0.

PROGRAMME OBJECTIVES

FINANCE AND ACCOUNTING REPORT ON UNITED GARMENT INDUSTRIES LIMITED

4.0. PROGRAMME OBJECTIVES

It was expected that by the end of the programme, the Chief Accountant of United Garment Industries Limited (UGIL) and his two subordinates working closely with the IMAS Consultant as facilitator would be able to do the following:-

1.1. DEVELOP A COST ACCOUNTING SYSTEM WHICH WILL:

- ensure that cost of finished products will not transfer any cost of inefficiencies in production, material handling and valuation, to the ultimate consumer;
- provide flexible cost structures that will not only facilitate pricing of the finished goods but also enable cost-volume-profit relationships of product lines to be determined periodically, and at varying levels of capacity utilization;
- c) be adaptable to computerization;
- d) adopt methods of process costing and job order costing suitable for customised products and special one-off orders, respectively.

4.2. DEVELOP A BUDGETING SYSTEM FOR UGIL WHICH WILL:

- a) create responsibility accounting;
- b) motivate high performance by all functions in the areas of cost reduction and profit maximization;
- provide instant checks and halts on unplanned spending;
- d) be adaptable to computerization;
- e) provide a feedback mechanism for actua; departmental performance in relation to planned performance sanctioned for annual profit plans;

4.3. DEVELOP AN IMPROVED REPORTING SYSTEM WHICH WILL:

- be capable of identifying and reviewing management information needs at all times;
- b) prescribe management information report formats for all responsibility centres indicating levels and frequency of reporting;
- be adaptable to computerization;
- d) set target reporting dates:
- e) provide opportunities for feedback on reports.

4.4. DEVELOP A DETAILED CONTROLLING SYSTEM WHICH WILL:

- a) utilise an effective financial and management accounting systems and procedures well suited for capturing data required in the processing of basic periodic financial information mainly:-
 - Profit and Loss Account
 - Balance Sheet and
 - Statement of Source and Application of Funds;
- b) enhance management control of operations through exception reporting through highlighting deviations of actual performance from planned performance within a budget period;
- demand periodic and timely analysis of the Company's business situation in terms of its liquidity, profitability and solvency.

4.5. DEVELOP A FINANCIAL PLANNING SYSTEM WHICH WILL:

- a) enhance top management control of enterprise cash and working capital through the following:-
 - the preparation of weekly, monthly, quarterly and annual cash budgets and more importantly, monthly working capital budget.
 - the preparation of debtors monthly ageing analysis.
 - the preparation of monthly analysis of raw material and consumables in stock, identifying obsolete stock, damaged stock and assigning reasons for the conditions of each class of stock.

 the preparation of monthly analysis of work-in-progress, assigning reasons for locking up capital in uncompleted jobs or process.

the preparation of monthly analysis of finished goods stock at current selling prices, indicating corresponding realizable mark-ups and unrealised sales taxes, if any.

東 い かなれいはからかけ

b) enhance tax planning.

4.6. DEVELOP A LIQUIDITY CONTROL SYSTEM WHICH WILL:

a) provide an ideal measure of the extent to which the Company should be deemed prepared to satisfy all maturing financial obligations under both normal and abnormal operating conditions. CHAPTER 5.0.

SUMMARY OF RECOMMENDATIONS

5.0. **SUMMARY OF RECOMMENDATIONS**

5.1. PRODUCT COSTING

- 5.1.1. A hybrid of Process and Job Order Costing methods should be adopted as appropriate in determining the finished cost of each batch produced.
- 5.1.2. Accounting for the production of each product line should be on the basis of batches.
- 5.1.3. Realizable incomes from the sale of production wastes should be applied to reduce actual cost of input raw material charged to Work-in-Process Accounts. The treatment of realizable incomes from waste sales as sundry income should be discontinued forthwith.
- 5.1.4. The issue of raw materials and other sub-materials to production should be done on the method of Last-In-First-Out (L.I.F.O).
- 5.1.5. The production of plant Daily Labour Usage Report should be commenced as the basis of capturing actual labour cost per each production batch.
- 5.1.6. Machine hour rates should be adopted as the basis for absorbing production fixed overhead cost.
- 5.1.7. For more effective results, the recommended costing and inventory control system should be computerised.

5.2. WORKING CAPITAL MANAGEMENT

- 5.2.1. Monthly stock taking should be carried out as a matter of policy.
- 5.2.2. Materials Requirement Planning System should be adopted for closer co-ordination between inventory control and production control.
- 5.2.3. A Perpetual Inventory Control System should be adopted for immediate use.
- 5.2.4. Monthly preparation of Ageing Schedule for accounts receivables should be commenced immediately.
- 5.2.5. UGIL's Management should establish a policy on its Account. Receivables to take account of cash and trade discounts, creditworthiness of customers, and levying of penalty on overdue accounts.
- 5.2.6. In order to improve upon the financial planning and working capital management, weekly, monthly, quarterly and annual cash budgets should be prepared.

5.3. **BUDGETING SYSTEM**

5.3.1. A Budget Committee should be formed to, inter alia, formulate broad guidelines for the preparation of UGIL's annual budgets.

5.4. FINANCIAL ACCOUNTING

- 5.4.1. There should be a permanent Fixed Assets Register for the Company.
- 5.4.2. The new Chart of Accounts should be modified with the assistance from PIES in order to be more suitable.

 Monthly Variance Analysis should be emphasized.

CHAPTER 6.0.

REVIEW OF FINANCIAL AND ACCOUNTING OPERATION

REVIEW OF FINANCIAL AND 6.0. **ACCOUNTING OPERATION**

REVIEW METHODOLOGY 6.1.

- The methodology employed by the Consultant consisted of:
 - (i)a series of interviews with the Internal Audit staff.
 - (ii) a series of interviews and discussions with the Chief Accountant and the Financial Accountant.
 - (iii) continuous interaction with the Company's Statistician and the Assistant Cost Accountant as well as all the general accounting staff.
 - (iv) series of interviews with the Production Manager, the Spinning Specialist, the Chief Engineer, the Stores Superintendent and a 1 the Assistant Managers and Supervisors in the Production and Marketing Departments.
 - (V) a study of the data flow through the operations of the Company, (Appendix 1).
 - (vi) a working visit to the two UGIL retail shops in Kampala.
- Critical analysis of the existing operation systems was conducted within the constraint of the Consultants time. Several problem areas were identified as a result, and these have been provided with the Consultants recommended solutions for improvements deemed necessary.
- 6.1.3. Prominent among the identified problem areas was the complete lack of cost centres in the costing system. Other problems included the following:-
 - The lack of a realistic method of costing for the finished goods.
 - The method of controlling raw material issues from the raw material stores to the Production.

The Charles with

- The method of controlling production labour cost. The method of controlling factory overhead cost.
- Working capital management.
- General planning for working capital needs.

- Appropriate Cost Centres have been evolved for all the major production activities in the factory. followed in the determination of the cost centres included the following:
 - initially identifying relevant profit centres.

specifying the product lines of the profit centres.

flowcharting the processes involved in the manufacture of the specified product lines

defining the appropriate product costs to be measured for the

manufactured product lines.
highlighting the main features of the product cost and stating the objectives of the cost.

physically observing production runs at each section of the Production Department with a view to identifying actual sectional cost elements and the suitability for cost centre creation.

- 6.1.5. Throughout the foregoing phases, the Senior Statistician and the Assistant Cost Accountant actively participated. Acting as a facilitator, the Consultant assisted the participants to eventually evolve the maiden cost centres of the factory into which they would be measuring the unit costs of various product lines.
- 6.1.6. centre development, the course of the cost opportunities for cost reductions were identified. have been addressed in the final design of the recommended methods of product costing. The Chief Accountant and the Financial Accountant were also engaged in the discussion of the practicabilities of the recommendations made for the improvements in the identified problem areas.

V. T. LANGE

6.2. REVIEW OF THE COST ACCOUNTING SYSTEM

- 6.2.1. The existing Cost Accounting System is not integrated with the financial accounting system. The only interface provided by the system is in the area of keeping subsidiary records in support of stock accounts, mainly, raw material, work-in-progress and finished goods.
- 6.2.2. The keeping of the raw material stock subsidiary record entails keeping detailed stock cards on each item of raw material from the point the purchased goods are received into the store up to the time requisition are made for raw material requirements. No method exists for recording the cost of issues to production.
- 6.2.3. It also records the movement of finished goods stock from the Work-In-Progress (W.I.P) account, but tails to account for what actually goes into the W.I.P Account before the transfers of products.
- 6.2.4. The only semblance of costing activity in the Company is in estimating a product cost for pricing purposes under an existing cost plus method of pricing. This is usually done upon request from either the Design Section or the Marketing Department for the purpose of producing and delivering specific job on a customer's orders.
- 6.2.5. In order to determine the estimated cost per unit of goods to be manufactured, the estimator prepares a statement on a cost sheet detailing the following:-
 - The cost of raw materials required according to the design specifications, at the latest purchase price.

7.3.16. Recommended Steps to Follow in Accounting for Factory Fixed Overhead

Select a cost allocation base (otherwise known as cost This should serve as a common application base). denominator for all products depending on the factory plant being considered, eg. Spinning Plant, C.M.T Plant.

とうで ときではれる 食事に

- 7.3.17. A cost application or allocation base is the common denominator for systematically relating a factory overhead with products.
- 7.3.17. The application base should be the most appropriate measure of the cause and effect relationship between overhead costs and production volume.
- 7.3.18. At UGIL, the recommended cost allocation bases are as follows:-

	Plant	Recommended Cost Allocation Base
(i)	Spinning	Machine Hours
(ii)	Knitting/Bleaching/Dyeing	Machine Hours
(iii)	C.M.T	Labour Hours
(iv)	Trousers Plant	Labour Hours
(V)	Jacket Plant	Labour Hours

- 7.3.19. Prepare a factory overhead budget for one year, detailing the individual overhead items like machine depreciation, supervisory charge, insurance, property rates and taxes, At the same time, prepare a budget for the total volume of the application base, eg. 20,000 machine hours, 50,000 labour hours.
- 7.3.20. Compute the budgeted factory overhead rate by dividing the budgeted total overhead by the budgeted application base.
- 7.3.21. Obtain the actual application base data (such as machinehours or direct-labour hours) as the year unfolds.

- 7.3.22. Apply the budgeted overhead to the products in the process accounts by multiplying the budgeted rate times the actual application base data.
- 7.3.23. At the year end, the Chief Accountant should account for any difference between the amount of overhead actually incurred and overhead applied to products.

CHAPTER 8.0.

WORKING CAPITAL MANAGEMENT

8.0. WORKING CAPITAL MANAGEMENT

8.1. **GENERAL OBSERVATIONS**

- 8.1.1. Working capital needs of UGIL has for a very long time been a source of concern for the successive managements of the Company.
- 8.1.2. Varied reasons have been adduced for the problem of working capital, including for example, the effect of massive looting of the movable parts of the factory equipment during the two successive civil wars in the country before 1986.
- 8.1.3. The Consultants however believe that lack of a clear understanding of the relationship between one component of working capital and another is one contributing factor to the problem of working capital. Another factor is lack of understanding of UGIL's working capital relationship with its scurce and application of funds statement.
- 8.1.4. In the opinion of the Consultants, an effective management of UGIL's working capital should communes with a clear insight of the Company's Working Capital Cycle. Figure 8.1 depicts the cycle. (Please see next page).
- 8.1.5. The success at managing the working capital will depend on the concurrent management of the major components of working capital, viz, Inventory, Accounts Receivable and Cash.

/

•

A LANGE TO A STATE OF THE PARTY

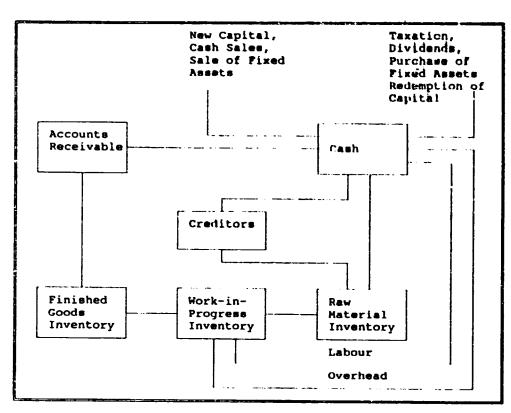

FIGURE 8.1 : Working Capital Cycle

INVENTORY MANAGEMENT 8.2.

- In the opinion of the Consultants, UGIL's objective of the 8.2.1. control of raw materials should be to satisfy the customer by meeting the schedule for deliveries.
- Failure to deliver on time has been one principal cause 8.2.2. for loss of business and customers.

- 8.2.3. Effective control of the raw materials throughout the manufacturing cycle should be pursued in order to prevent this problem from arising.
- 8.2.4. Specifically, the maintenance of optimum inventory levels and inventory turnover for UGIL's operation at maximum profit will be achieved through the control of inventories to ensure that the right material, in the right quantity and of the right quality is made available at the right plant at the right time.
- 8.2.5. Inventories represent a financial investment, ie. the purchase price paid for the material, the cost of labour applied to goods that are in process or finished, and the cost of handling and storage.
- 8.2.6. The planning of optimum inventory levels by inventory management requires close cooperation with the marketing function.
- 8.2.7. Market trends should be predicted accurately and inventory levels adjusted increased when increased sales are anticipated and decreased when lower sales volume can be foreseen.
- 8.2.8. Large inventories in the face of declining sales mean lower profits. Small and inadequate inventories in the face of an increasing marketing demand may result in the loss of sales to competitors and a decreased profit.
- 8.2.9. The use of a ratio of the investment in inventories to operating profit may be used as a guide in establishing optimum inventory levels for all classes of inventory on a historical basis.

<u>ا</u> ا

. . -- , .

. .

1

- 8.2.10. It is pertinent to emphasize however, that the optimum inventory is not necessarily either the minimum or the maximum level of inventory; nor is it the operation at a maximum inventory turnover.
- 8.2.11. Inventory turnover, a very common index of inventory control, is equal to the ratio of the value of the finished products sold out to the average investment in inventory for the same period.

 Inventory Turnover = Value of Finished Products Sold Value of Average Inventory
- 8.2.12. Obviously, the higher this index, the lower the inventory levels and the lower the cost of maintaining the inventories. Also, it is obvious that a high index indicates a shorter manufacturing cycle with all the saving inherent therein.

8.3. THE CASE FOR THE ADOPTION OF MATERIALS REQUIREMENT PLANNING CONCEPT (MBP)

- 8.3.1. At UGIL, the only known approach to inventory management and control has depended largely on the determination of reorder points and Economic Order Quantities or Economic Manufacturing Quantities (EMQ).
- 8.3.2. The fundamental assumption underlying these order point and EMQ system is that each item in inventory is independent of all other items and can be ordered independently. This may be true in some instances.
- 8.3.3. However, in the case of UGIL, this system has not really worked well in the past leading to uncoordinated material inputs purchases.

- Consequently, in the CMP Plant, for instance, huge amounts 8.3.4. of working capital have been locked up in work in-progress inventory because of lack of sewing thread and mere packaging materials.
- On the contrary, production materials at UGIL are 8.3.5. definitely dependent on each other.
- Accordingly, the adoption of a system that permits the 8.3.6. calculation of future raw material demands co-ordinated in time according to when they are required on the production line need not be overemphasized.
- In the view of the Consultants, the adoption of a 8.3.7. Materials Requirement Planning System is recommended. The co-ordinating role of MRP is shown in the figure $8.2\,$ below.

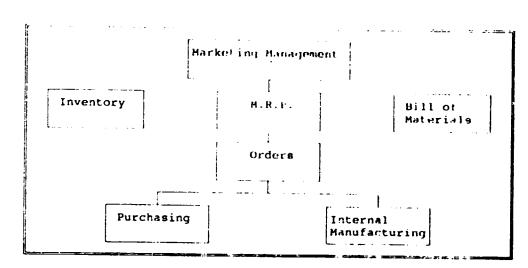

FIGURE 8.2 : The Co-ordinating Role of M.R.P.

- 8.3.8. Inputs from marketing management would be customer orders and orders to produce just-in-time quantities for stock in order to meet a seasonal demand, eg. school uniforms.
- 8.3.9. In this connection, basic inventory information should be provided by regular inventory records.
- 8.3.10. M.R.P would then co-ordinate the above information with a bill of materials, usually prepared by Production Department.
- 8.3.11. The bill of material should not simply be a list of material required; it should be structured, that is, it must indicate the manner in which a product is put together from the raw material state into the final stage.
- 8.3.12. The itemm limited can be time phaned and made into a mauter schedule which becomes the prime tool of MRP.
- 8.3.13. A master schedule in turn can generate material and capacity requirements over a period of time, taking into account, the interdependency of these requirements.
- 8.3.14. As shown in figure 8.2 above, MRP then issues order for materials either through purchasing or through the internal manufacturing facility.
- 8.3.15. Through a proper computer programming, the MRP system can be handled easily into the result that Managers can devote their time to managing production rather than tracing material.

1

.

7

とうと しなれずにどれる

- The merits of MRP apart from adaptability and computerization include the following:
 - Emphasis is placed not only on having the right quantity of an item but also having it at the right time as required in the production cycle.
 - M.R.P is concerned not only with inventory levels but is also tied in closely with the function of production planning and control, which deals with the flow of (ii)materials through the actual production process.
 - M.R.P offers the opportunity for closer co-ordination between inventory control and production control with attendant savings in costs as well as improvements in (iii) meeting customer delivery dates.

PURCHASING AND CONTROL OF MATERIALS AT UGIL 8.4.

- Control of the flow of incoming material is an important responsibility of the Purchasing Committee of UGIL.
- The primary goals of the purchasing function are twofold 8.4.2. viz:
 - to contribute towards the profits of the manufacturing activity, and
 - to ensure the availability of materials so that delivery schedules can be maintained, thus keeping the confomer satisfied.
- In order to support the above goals, the following 8.4.3. specific objectives must be met:-
 - Procurement of the right material, in the right quantity (i)and of the right quality.
 - Receipt or delivery of this material at the right place (ii) and at the right time.
 - (iii) Purchase of the material from the right source and at the right place.

PURCHASING PROCEDURE 8.5.

- 8.5.1. The Company's profits are affected by good purchasing practices based upon sound principles.
- For effective industrial purchasing, 8.5.2. the Purchasing Committee or the purchasing function should be assigned full responsibility authority and for determination of the sources of supply and the price to be paid.
- In this connection, the following 10-step procedure is 8.5.3. recommended: -
 - Receipt and analysis of the purchase requisition (i)
 - Selection of potential sources of supply (ii)
 - (iii) Issuance of request for quotations
 - (iv) Receipt and analysis of quotations
 - (v) Selection of the right sources
 - (vi) Determination of the right price
 - Issuance of the purchase order (vii) (viii)
 - Follow up to ensure scheduled delivery
 - Analysis of receiving reports (ix)
 - (X) Analysis and approval of supplier's invoice for payment

東京大大大

8.6. RECOMMENDED INVENTORY CONTROL SYSTEM

- 8.6.1. The problem of UGIL's control of manufacturing inventories basically typical of problems in industrial communications.
- 8.6.2. The complexity of the system is directly proportional to the number of items in the inventories and the number of transactions that have to be recorded to keep abreast of the movement of the material.

- 7.3.13. In the Blowing/Carding Cost Centre idle time, redundant or unproductive labour cost for a month can be revealed by comparing the actual cost of labour consumed with the total salary and wages payable per month, based on the approved payroll for the cost centre.
- 7.3.14. The required accounting would be as follows:-

Payroll for Blowing/Carding Cost Centre for the month of May: USh. 10,000 Transaction:

Entry By Journal Dr. Cr.

Labour Cost Control A/C 10,000 Debit : Credit: Salary and Wages

Payable Account 10,000

By Ledger Posting Salary & Wages Payable A/C Labour Cost Control A/C

Labour Cost Salary and Wages Payable Control 10,000 10,000

Type of the first

159

- In order to ensure the availability of inventory items at 8.6.3. all times at UGIL, a close control through a system which will ensure that a new inventory figure is determined after each transaction, ie. receipt and issues, cannot be overemphasized.
- To this end, the Consultants recommend a system of 8.6.4. perpetual inventory for immediate use. Such a system should be administered through the provision of the following basic information:-
 - (i) On Order This part of the record shall show the quantity of material ordered but not received. New orders small be added in this column and receipts subcracted
 - /ii) Received All receipts shall be posted being there shall be no quantity in this column.
 - (111)On Hand This balance figure shall represent the quantity of the item that should be in the stock room. Receipts shall be added to this column and issues subtracted.
 - (iv) A record of all quantities to be issued to the factory shall be entered in this column.
 - (V) Allocated In this column, there shall be entered the quantities to be reserved for later issue for specific orders. Reserving of materials still in the stock room will ensure their availability when they shall be on the manufacturing floor.

7.3.15. The entry in the Variable Overhead Control Account should normally be preceded by the entry of the charge for meter readings. All ascertained value should be credited to the U.E.B Account and debited to the Variable Overhead (Power) Control Account.

Transaction: Factory Overhead Incurred: USh. 59,415

Analysis

: For the individual factory fixed overhead accounts these should first be budgeted. An absorption rate should then be determined on the basis of an appropriate cost driver, eg. machine hours, labour hours or labour cost.

Relevant Fixed Overhead in Process 1 include:

- Machine Depreciation

- Land and Building Depreciation and

- Supervisory Charge.

160

- 8.6.5. In order to achieve effective control of inventory items, perpetual comparison of the above levels of inventory should be made to the planned levels of inventory determinable through the Materials Regultement Planning System recommended in section 8.3.7 above.
- 8.6.6. Whenever any significant variation is revealed it must be immediately investigated and a purchase requisitioned or shop order originated which information shall be recorded in the "On Order" column.
- 8.6.7. The merit of this system is that, properly operated, there shall never be any resultant over or under supply of inventory item resulting in constant flow of production activity.

8.7. RECOMMENDED INDUSTRIAL DOCUMENTATION

8.7.1. In order to forestall the observed problem of industrial communication in the matter of control of manufacturing inventories, five (5) basic communication forms have been recommended as follows. These forms shall be the principal sources of basic data in inventory control.

10.0. REPORTING SYSTEM

10.1. EXISTING SYSTEM

- 10.1.1. The main management information produced by the System consist of the year-end Protit and Loss Accounts, the Balance Sheet and the Statement of Source and Application of Funds. In addition, there used to be a Monthly Plant Manufacturing Account but this has not been prepared for well over one year.
- 10.1.2. The identified defects with the said Manufacturing Account

 (Appendix 9) are as follows:-
 - (i) Payroll payments are erroneously included in the cost of production instead of actual cost of labour usage in production.
 - (ii) Factory fixed overheads is completely excluded from the determination of the actual cost of production.
- 10.1.3. The effect of the above defects is that the true cost of the finished product is grossly misstated.

10.2. PROPOSED MANUFACTURING REPORTING FORMAT

- 10.2.1. In order to reflect the actual cost of labour consumed and the true factory fixed overhead in the cost of manufactured product, the proposed format as per Appendix 10 is recommended.
- 10.2.2. The total cost of producing the goods must be transferred to the finished goods stock account from which transfers will be made to cost of sales account when sales are eventually made.

- 10.2.3. The PIES Financial Manual incorporates specified accounting and financial reporting system. These should be referred to for the purposes of meeting the new reporting requirements of the Company.
- 10.2.4. It is however pertinent to mention that the contribution approach to the income statement and to the problems of cost allocation should be emphasized on monthly basis. In this way, the Management of UGIL would be helped to evaluate performance and make decisions.

10.3. NON-FINANCIAL PERFORMANCE MEASURE

- 10.3.1. The following measures should be instituted in addition to the usual financial measure:
 - Percentage of products delivered on time
 - Number of defective units produced
 - Set up time for a batch of production
 - Average time from order to delivery, and
 - Kilogram of output per direct-labour hour

CHAPTER 11.0.

EVALUATION OF CURRENT SITUATION

MARKETING REPORT ON UNITED GARMENT INDUSTRY LIMITED

11.0. EVALUATION OF CURRENT SITUATION

11.1. MARKETS AND MARKETING

- 11.1.1. UGIL products which were broadly grouped into three (3) categories namely, fine yarn, knitted and woven products were sold in both the local and foreign markets.
- 11.1.2. Only high quality knitted products and fine yarn were being exported. The exports were made mainly to Europe, the U.S.A. and Canada.
- 11.1.3. Even though no export order was being processed at the time of the IMAS review exercise, the potential for export, in terms of the magnitude of enquiries was great. Enquiries about T-Shirts and Polo Shirts had been received from several European and African countries, the U.S.A. and Canada.
- 11.1.4. In the local market, UGIL had been and still was the country's leading garment manufacturing Company.
- 11.1.5. During the review exercise, however, increasing competition was being provided by imports including second-hand clothing.
- 11.1.6. It was observed that one of the reasons why the secondhand clothing business was flourishing was the hard economic time the country was passing through.

- 11.1.7. The woven garments were also facing competition from both imported garments including second-hand clothing and some small scale local garment industries.
- 11.1.8. The total Uganda population of 16,580,000 a segment of which was providing the local market is broken down as follows: -

Male 8,124,700 (49%) Female 8,455,300 (51%) Children < 15 7,958,400 Adults > 15 < 65 -8,124,200.

- 11.1.9. Even though statistics were not available, at the time of the review, to indicate the size of the competition, UGIL already felt threatened and was lobbying the government to place a ban on the importation of second-hand clothing.
- 11.1.10 At the time of the review, little or no marketing was being done.
- 11.1.11 Observations were made including the underlisted that greatly accounted for the no marketing situation:-
 - The Marketing Department was weak and understaffed. Even though the department had been upgraded from a "Sales Department" to a Marketing Department, it was still performing only limited sales functions with a staff of 5 at the Head Office comprising the following:-
 - . I Acting Marketing Manager
 - l Marketing Officer in Charge of Sales
 - l Field's Salesman
 - 2 Sales Assistants.

- The Acting Marketing Manager was barely 3 months at post, at the time of the review and had no previous experience in that position. The Marketing Officer who had some sales experience was barely a year at post. The two Sales Assistants were junior staff and their roles were limited to receiving and recording sales orders.
- The Department had nothing to do with product development and design. The Production Manager of the Company was deciding what to produce and how much to produce.
- Products prices were determined by the Cost Accountant with no inputs from the Marketing Department.
- In the face of rising costs and increasing competition the Company was still relying on its old and ineffective ways of distributing its products. UGIL maintained its own store outlets. 8 were being operated at the time, down from more than 15 it operated in the mid seventies.
- Promotion was being done on a small scale and limited to mainly Christmas and Easter clearance sales. Advertising was non existent.
- In the area of export, the Company had not been exporting for about a year at the time of the review exercise. This was because the foreign companies buying the products had requested improvement on quality.

- 11.1.12 In view of the aggressive marketing policies that are expected to be pursued during the plan period, the Marketing Department is to be strengthened with the appointments, in the first year of the plan period, of the following:-
 - A substantive Marketing and Sales Manager who has a previous experience in marketing.
 - A Marketing Services Officer to be in charge of Research.
 - An Export Officer to be in charge of the Export Section of the Department.

CHAPTER 12.0.

DETAILED ANALYSIS AND FINDINGS

12.0. DETAILED ANALYSIS AND FINDINGS

12.1. PRODUCT MIX

- 12.1.1. At the time of IMAS review exercise, Management differed on the number of product items produced by the Company. Production and Marketing Departments quoted different figures. Even the staff of the Marketing Department did not agree on one number. See Appendix 1.
- 12.1.2. From the listed prices as at the 3rd of October, 1991 and the 20th of February, 1992, one hundred and twelve (112) product items were counted. Appendix 2 refers.
- 12.1.3. In 1989, however, the figure was 70, indicating that between 1989 and 1991, 42 more products were added to the number of products produced in 1989, representing a 60% increase within 2 years. In the same period, sales dropped from U.Sh 284,600,000 to U.Sh 157,154,468, a drop of about 45%.
- 12.1.4. The 112 product items were grouped into 6 product lines as follows:-
 - Shirts
 - T-Shirts
 - Briefs and Pants
 - Trousers
 - Kaunda Suits
 - Suits.
- 12.1.5. The six product lines made disproportionate contributions to sales. Table 12a shows the sales and the corresponding percentage shares for the product lines in the first quarter of 1992.

TABLE 12a

SALES AND PERCENTAGE SHARES FOR THE SIX PRODUCT LINES IN THE 1ST QUARTER OF 1992

· · · · · · · · · · · · · · · · · · ·	: : 3	HUARY :	•	enhan :		inech :	· · · · · · · · · · · · · · · · · · ·	'

RAUNEA SUITS		-	? 	1.117.740	4	767 .R24]	1 . a. ? ? . 784 1 . a ? ? . 784	12
SULTS	-	- -	-			-	· .	-
TOTAL	.	41,836,440		46,077,405		37,103,784	125,017,629	100%

- 12.1.6. It can be seen from the above table that no suits were made and sold in the 1st quarter of 1992. Of the total of USh. 125,017,629 volume of sales, T-Shirts alone contributed USh. 88,696,740, representing 71% of the total sales volume for the quarter.
- 12.1.7. Under the T-Shirts product line, eight (8) product items were being produced. Three of the eight, namely, Buggy T-Shirts, Ordinary T-Shirts and Junior T-Shirts dominated the number of pieces produced under that line. Out of 136,747 pieces produced, the 3 contributed 131,220 pieces, representing a hefty 96% of the total.

えい なだがれるの

T.

- 12.1.8. The same trend has been identified for the two successive previous years of 1991 and 1990.
- 12.1.9. From Table 12a above, it can be seen that the quantity (in pieces) of T-Shirts sold for the first quarter are given by the following calculations:-

MONTH	QTY (IN DOZEN)	OTY (IN PIECES)
January	2,134	25,608
February	2,288	27,456
March	1,421	17,052
TOTAL	5,84 L	70,116
	= == :	=====

- 12.1.10 Unsold T-Shirts in pieces is given by 136,747 70,116 66,631, indicating that only 51% of T-Shirts produced in the first quarter was sold. The rest was left in stock.
- 12.1.11 The conclusion is that, even though T-Shirts, especially the Buggies are one of the products that is much in demand, and one of the fast moving items, its production is not planned, thus, locking up the Company's scarce working capital in inventory.
- 12.1.12 Consultants recommend that decisions concerning what products to produce and the quantities to be produced are to be made by the Marketing Manager in consultation with the Production Manager. Distinction is to be made between products on order and products to replenish stock. With regard to products on order, the present practice of the Marketing Manager consulting with the Production Manager should continue.

くないないといかま

Producing to replenish stock should however be guided by sales forecast for, and the stock positions of, each region.

- 12.1.13 With regard to needucts, the decisions should be made after a market research has identified customers needs and preferences and the size of the markets to be served. The General Manager is to approve of the production of new products.
- 12.1.14 In the face of working capital shortages, knowing what to produce from the market research is even not enough. A further step is needed to ensure that products that make high contribution to sales and have high turnover rates are selected for production.
- 12.1.15 The marketing staff of UGIL have been taken through the steps of determining products contribution to sales and the combination of products that ensures optimum sales.

 Appendix 3 illustrates the steps involved.
- 12.1.16 Grouping UGIL products into Knitted Garments, Woven Garments and Fine Yarn also revealed disproportionate contributions to sales.
- 12.1.17 In the first quarter of 1992, out of the total sales of USh. 125,017,629, knitted garments alone contributed USh.100,012,650 representing 80% of the total sales for the quarter.

- 12.1.18 However, in terms of the number of pieces sold, IMAS review team discovered that more knitted garments would have been sold if they were made available in the right quantities and colours at the right time. For instance, most schools use the T-Shirts as sectional jerseys. They are therefore needed in the four colours of red, yellow, green and blue. Yet, the dye needed to turn out these products has almost always been in short supply.
- 12.1.19 In the case of woven garments, it was revealed that it was not because they did not sell that explained why they made a far less contribution to sales, but that they were not made available at the right time. For example, Yamato white short-sleeve shirts are mostly used as school uniforms and therefore bought mostly by students. Thus, they are high in demand at the beginning of the school seasons which are clearly listed as January/February, May/June, and August/September.
- 12.1.20 Records however showed that these shirts have never been produced and made ready to meet these seasons simply because their production has never been planned with these seasons in mind.
- 12.1.21 In the months of January through May, 1992, a total of only 2,209 pieces were produced. This could be the result of poor planning.
- 12.1.22 It was observed that Kaunda suits were high on demand. Several factors account for this high demand. Firstly, its price averages less than USh. 29,000 while the competitors' prices are averaging more than USh. 50,000.

- 12.1.23 Secondly, the suits are very popular in Uganda. They are worn on almost all occasions by both the rich and the poor and because their prices are altordable compared with the European suits, the market for Kaunda suits is relatively big.
- 12.1.24 Thirdly, UGIL tailors have not been found wanting in terms of skills. The Company boasts of its highly skilled tailors. They only need very little training in terms of time and money to adjust to new trends, regarding style and fashion, on the market.
- 12.1.25 Inspite of these advantages, Kaunda suits have been in short supply. At the time of the review exercise, it was being produced in one kind of material and colour and in a limited quantity.
- 12.1.26 Also on demand in the woven category were bed sheets.

 Customers who have once bought and used UGIL bed sheets have been enquiring about these products but they are rarely found on the shelves.
- 12.1.27 Available UGIL records indicate that Store Attendants have been communicating customers' requests to the Head Office but little or nothing has been done about these requests.
- 12.1.28 Consultants see a need to plan the production of the Company's products to meet the demands on the markets. First and foremost, the production of Yamato Shirts used by schools should be planned to meet the start of the school seasons. This requires that they be made ready

東大大大

in the outlets latest one month before the schools start. Statistics to help determine how much to produce to meet the demand can be obtained from the Ministry of Education in such releases as "proposed intake into government aided boarding secondary schools".

12.2. PRODUCT DECISIONS

- 12.2.1. Decisions concerning what to produce and how much to produce at UGIL with regard to the introduction of new product are made without the Fnowledge and involvement of the Marketing Department.
- 12.2.2. At the time of IMAS review, the Production Manager of the Company made almost all major decisions concerning the products produced by UGIL.
- 12.2.3. The time to produce was determined by the time an order was received and by the need to produce to replenish Company's outlets; the design of products was determined by the trend of the time, as expressed by the Production Department; and the quantity produced was dictated by raw materials availability and storage capacity. (See Appendix 4). The Production Manager puts it simply in the following words: "Marketing rarely advises us".
- 12.2.4. The Marketing Manager's role with regard to production was limited to receiving orders and consulting with the Production Manager on whether or not the Production Department was capable technically, of producing to meet the order.

A 1800

- 12.2.5. The practice has resulted in situations that are adversely affecting the Company, of which the following are prominent:-
 - Creating stock piles of products that are not in demand especially in the upcountry regions;
 - Unbalanced product mix in favour of T-Shirts;
 - Creating stockout situations for seasonal items such as school uniforms;
 - Ignoring specific orders from the store Managers.
- 12.2.6. Consultants recommend that product decisions should be made by the Marketing Manager in consultation with the Production Manager.

12.3. PRICING PROBLEMS

12.3.1. UGIL's finished goods prices are set by the Company's Cost Accountant. The price of the finished product is determined as follows:-

PRICE = Production Cost + Other Fixed Overheads + Margin + 10% Sales Tax.

- 12.3.2. The set price is communicated to Management through the Chief Accountant. After Management's acceptance, the Marketing Manager writes to inform all Shop Managers about the new prices.
- 12.3.3. Even though the other fixed overheads include distribution and sales costs, the Marketing Manager plays no role in setting the price.

- 12.3.4. The method does not take cognizance of the markets ability to pay. It also alienates the Marketing Department which is supposed to know how much the customer is ready to pay.
- 12.3.5. Also, because of UGIL's dominance of the garment market, it has not been competitive in its pricing. The Company has had too much freedom to change prices.
- 12.3.6. It was observed that price change announcements have been made every year since 1989.
- 12.3.7. In the two successive years of 1990 and 1991 prices changed two times during each year.

Dates on which New Prices were Announced

April	6	-	1989
February	17	-	1990
June	18	-	1990
January	15	-	1991
October	3	-	1991
February	20	-	1992

SOURCE: UGIL Records

- 12.3.8. It was noted that almost all price changes were increases.
- 12.3.9. Table 12b below shows the average prices in Uganda Shillings, of the 5 product lines of Shirts, T-Shirts, Briefs, Trousers and Kaunda Suits in each month of the first quarter of 1992.

まごう とでいるかの

TABLE 12b

LIST OF PRICES OF THE 5 PRODUCT LINES IN EACH MONTH OF THE FIRST QUARTER OF 1992

MONTH	SHIRTS	T-SHIG	BRIEFS	TROUSERS	KAUNDA
January	.1000	1265	650	4630	10,370
February	2504	1265	663	4578	10,370
March	3730	1265	663	5165	14,788

SOURCE: UGIL's Records,

- 12.3.10 The Table above shows that apart from T-Shirts prices that remained unchanged at an average of USh. 1265 there were price changes in all the other product lines for the period.
- 12.3.11 Shirts and Trousers show decreases of 17% and 1% respectively in February but went up by 49% and 13% respectively in the following month.
- 12.3.12 Such erratic changes in prices are likely to create negative impressions of unstable prices and/or increasing prices in the minds of both the customers and the Company's employees. Furthermore, they do not help customers to plan their purchases.
- 12.3.13 Consultants recommend that, price changes that are effected immediately after an input prices change should cease.

東京 ときいいない

- 12.3.14 It came to light during the review exercise that customers were complaining that WGIL's prices were high. Even UGIL's own personnel, including marketing personnel, were of the view that UGIL's prices were high relative to the competitors.
- 12.3.15 In a situation of little or no marketing as prevailed at UGIL during the review exercise, marketing personnel are likely to blame poor sales on the "perceived" high UGIL prices.
- 12.3.16 Almost every UGIL personnel interviewed by Consultants mentioned high prices of UGIL's products as one of the factors causing poor sales over the years as shown below:

TABLE 12c

YEARLY SALES VOLUME (IN USH): 1985 - 1991

YEAR	VOLUME	Increase/decrease
1985	350,700,000	-
1986	407,800,000	+ 57,100,000
1987	20,900,000	- 386,900,000
1988	167,700,000	+ 146,800,000
1989	284,600,000	+ 116,900,000
1990	95,920,845	- 88,679,155
1991	157,154,468	+ 61,233,623

SOURCE: UGIL Records

The sales trend over the years has not been encouraging.

12.3.17 Even though the looting during the wars could be used to explain some of the poor sales performances, it is interesting to note that the 1986 high of USh.407,800,000 has never been reached in the succeeding years.

- 12.3.18 Also while it is true that there have been price increases for most of the Company's products over the years, the general customer perception that UGIL as a Government Company, should have the lowest of prices could be working against the Company.
- 12.3.19 Consultants survey of the major competitors (second-hand clothing dealers) prices for certain items revealed the following:-

ITEM

ITEM	PRICE RANGE (IN SHILLINGS)
T-Shirt (50% Polyester) (50% Cotton)	2,000 - 4,500
Polo (65% Nylon 35% Cotton)	2,600 and upwards
Shirt	2,000 - 5,000
Trousers	6,000 - 15,000
Suits	30,000 - 65,000

- 12.3.20 Compared with UGIL's 1992 thist quarter average prices (Appendix 5) for similar items, UGIL's prices are not higher as claimed.
- 12.3.21 Consultants recommend that information on the market be gathered to verify customer or competitor claims.
- 12.3.22 In order to make customers aware of the Company's relatively low prices, Consultants recommend comparative advertisement of prices in the print media. 12.5.10 explains comparative advertisement.
- 12.3.23 The General Manager is to set the final prices of UGIL products in consultation with the Marketing Manager and with inputs from the Cost Accountant.

かって これがないと

Also, price changes - if any - could be made after the Government's reading of the national budgets

12.4. **DISTRIBUTION**

- 12.4.1. UGIL distributes most of its products direct to the end user through its own retail store outlets.
- 12.4.2. Currently, there are 8 of them serving the whole country at the following locations:
 - Factory
 - Kampala
 - Masaka
 - Misindi
 - Mitiana
 - Mukono
 - Jinja
 - Mbale
- 12.4.3. It is argued that distributing through own retail outlets has a major advantage in exercising full control over the Company's products.
- 12.4.4. Product prices, for example, are kept the same in every part of the country where there is an outlet.
- 12.4.5. It is explained that price is to be controlled because most of UGIL's customers fall within the age group (below 21 years) that depends on parents for clothing needs.
- 12.4.6. It is further argued that distributing through own outlets helps to get every part of the country covered.

いてくないないとことを

- 12.4.7. However, for UGIL to continue in its present policy of distributing through its own store outlets there is an immediate need for more outlets in order to cover all the regions of the country. Currently, there is no outlet in the Northern region.
- 12.4.8. Within certain regions that are already being covered, more outlets are also needed.
- 12.4.9. The staff of the Kampala store outlet are of the view that at least three store outlets are needed in Kampala alone.
- 12.4.10 In their view, the present location of the Kampala shop is remote in relation to where their major competitors second-hand clothing dealers are concentrated.
- 12.4.11 They have observed that customers usually converge to that part of town where their competitors are located, and where almost every item is sold, and find it difficult and time consuming to walk all the way from there to the Kampala outlet.
- 12.4.12 Again, they claim sometime ago, UGIL maintained 5 retail outlets in Kampala alone.
- 12.4.13 To run the outlets, a substantial number of staff is needed. A staff of 19 run the 8 outlets the Company is maintaining, serving as Shop Managers, Cashlers, Shop Assistants, Cleaners and Security Personnel.

- 12.4.14 However, the present economic situation in the country in addition to the financial constraints of the Company make it difficult if not impossible to continue with the practice.
- 12.4.15 UGIL, in the mid seventies, had more than twice the number of its present 8 outlets, covering every region of the country. Their operations were discontinued during the wars when they were looted. After the wars, however, it has been slow to get even 8 of them reactivated because of the economic problems faced by the Company.
- 12.4.16 Apart from the financial problems of starting new outlets, the cost of maintaining the existing ones has been considerable.
- 12.4.17 Besides staff salaries and expenditures on maintenance of the outlets, the following expenditures are made every month:
 - 50,000/~ being rent for the 7 shops
 80,000/~ spent by each shop manager on transportation and other expenses to collect items from the factory.

 10,000/~ stationery cost.

 (See Appendix 6).
- 12.4.18 The revenues generated by these shops have not been impressive. The six shops outside Kampala have been generating on the average a fotal of 6.3 million Uganda Shillings per month with the following contributions:-

<u> БНОР</u>	REVENUE (IN MILLIONS OF USH/MONTH)
Masaka	1.5
Misindi	0.6
Mitiana	0.8
Mukono	1.0
Jinja	1.2
Mbale	1.2

SOURCE: UGIL Records

- 12.4.19 In contrast, the two shops in Kampala alone generate an average of 10.8 million Uganda Shillings every month.
- 12.4.20 All the 8 shops together generate a total of about 17 million Uganda Shillings in revenue every month.
- 12.4.21 A total of about 30 million Uganda Shillings is generated every month through deposits and deliveries that are made at the factory and serve as other channels of distribution.
- 12.4.22 On the basis of about 40.1 million Uganda Shillings generated by all channels of distribution together, the following percentages are recorded:-

	REVENUE	§ OF TOTAL
All Shops Outside Kampala	6.3m	17%
2 Shops in Kampala	10.8m	29%
Through Deliveries and Deposits	20.0m	54%

もっているではいると

12.4.23 Communication between the Head Office and the Shops outside Kampala has also been a problem. In the absence of a reliable telephone network system, sending information from the Head Office to the Shops outside Kampala is only possible by travelling the distance.

The Company does not have the transport to do this on regular basis as required. To acquire one is not possible in the short run due to lack of funds. As a result, Shop Managers spend much of their time travelling to and fro.

- 12.4.24 At the time of IMAS review exercise, most of the shops employees who stay in direct contact with the customers and are therefore in a position to know or find out about their needs and preferences were not educated. To use them to gather research information from customers and the areas they operate will call for new appointments and training that will require time and money which the Company cannot afford.
- 12.4.25 In some of the shops, it was observed that there was lack of proper care and supervision. Items on shelves were not properly arranged. They were bundled together and most of them had no covers giving the stores the appearance of "discount outlets". A discount outlook is most likely to alienate our customers in sports such as tennis and golf players who are considered relatively well-to-do in Uganda.
- 12.4.26 The relatively well-to-do consumers are interested in more than just price. They are interested in product quality, distinctiveness, style and many other factors which lead both physical and psychological satisfaction. Consumers not only can af ford but want: product differentiation and sales promotion. From them the consumer receives great deal psychological of satisfaction and utility.

- 12.4.27 Consultants recommend that products designed for tennis and golf players be distributed through speciality stores like the boutiques in the cities.
- 12.4.28 Finally, shortages in the shops were a big problem. There were shortages for certain items such as school shirts which are high in demand. Worse still, most of those that were made available were not in sizes and colours customers want most. Non-availability results in unreliability and unreliability on the part of UGIL will make customers shift to other sources that have them available. This may also explain why the second-hand clothing business is flourishing even though they do not have comparative advantage in price.
- 12.4.29 Ir. conclusion, UGIL's direct method of distribution through its own outlets is ineffective and inefficient. The goods are not reaching the customers in adequate quantities at the right locations and times when they are needed.

12.4.30 Strategies for Expansion

- 12.4.31 **UGIL** should take full advantage of its monopoly in knitted garments in Uganda.
- 12.4.32 Goal is to make its products available in every region of the country. Each region is to be segmented on the basis of sex, age, customer type, orc.

- 12.4.33 Of the four major market expansion alternatives identified, (see Appendix 7), the dual diversification strategy can be selected for use by UGIL. The strategy implies that all regions will be covered; and within every region, all the available segments will be targeted.
- 12.4.34 This strategy is to be used for the simple reason that UGIL's product lines appeal to many segments, and every region in the country is to be covered.
- 12.4.35 The Company has already acquired some experience in covering all the regions of the country. But since UGIL's resources to accomplish this dual diversification is limited, the use of commission agents and retail agents in each region is recommended. This approach will require relatively little investment in the short run. See Appendix 12 for the details of the approach.
- 12.4.36 The agents duties requirements should be specified in an agreement. They should include, among other things, the following:-
 - storage facilities
 - carrying non-competitive products
 - geographical area to cover
 - commission based on a percentage of sales to be determined by management.
- 12.4.37 It is also recommended that an advisory country of some of the retail agents be formed to help in the search for information about:-
 - changes in buyer preference
 - changes in the concentration of buyers
 - changes in the location of buyers.

12.5. ADVERTISING AND SALES PROMOTION

- 12.5.1. Advertising by definition seeks to inform and persuade consumers about the Company or its products through the mass media.
- 12.5.2. This important aspect of the Company's marketing mix has, for several years running, not been given the due attention by Management.
- 12.5.3. Since 1989, the Company has had for its sales promotions, the following expenses:

TABLE 12d

SALES PROMOTION EXPENSES IN USH. 1989 TO JUNE 1992

YEAR	PRESS, TV. RADIO	GRATIS	TRADE SHOWS	TOTAL
1989	1,296,525	1,580,196	221,800	3.098.521
1990	1,051,080	2,037,085	120,000	3,208,165
1991	1,272,725	4,251,453	NIL	5,524,178
June 1992	NIL	NIL	NIL	NIL.

SOURCE: UGIL records

- 12.5.4. Even though Table 12d is showing expenditures for the use of the mass media, what was paid for had only very little persuasion to do. They were expenditures on the following:-
 - UGIL's congratulatory messages to the nation on the occasions of independent day anniversaries.
 - Radio announcements on UGIL's Easter or Christmas clearance sales.

- 12.5.5. Gratis are donations, in kind, to charitable organizations such as the red cross. They are made by the General Manager on behalf of the Company to those organizations. With the exception of gratis that have been increasing over the years, the expenditures on the media and trade shows have been decreasing and do not follow any regular pattern.
- 12.5.6. The apparent neglect of advertising can only be attributed to the monopoly which UGIL has enjoyed, for a long time, as a garment concern in Uganda.
- 12.5.7. With the emergence of increasing competition, advertising and sales promotion can no longer be overlooked. It should be planned and organised on yearly basis.
- 12.5.8. It is recommended that **UGIL** should seek to achieve the Uganda publics acceptance of the Company and its products through advertising and sales promotion.
- 12.5.9. The Marketing and Sales Manager should select and schedule advertising media. Both newspapers and radio should be used, as well as television and occasionally, local areas promotions. The radio will be the most appropriate medium to reach the upcountry population. Consumers will need to be informed about the distribution outlets throughout the country.
- 12.5.10 **UGIL** has several comparative strengths that the public should know about. For instance, the quality of its products (the texture, especially) compares favourably

with imports. In addition, the Company can easily produce to meet special designs and preferences at affordable prices.

12.5.11 In order to disabuse peoples minds of the "perceived" high prices of the Company's products, comparative advertisement through the newspaper, and in the form provided below, should be used:

ITEM	UGIL'S AVERAGE PRICE	COMPETITORS AVERAGE PRICE
T-Shirts	3,000/-	3,250/-
Polo	3,910/-	4,000/-
etc.		

- 12.5.12 The items selected should be those in demand and those in which UGIL has a comparative price advantage. With prices compared side by side as above, the customers will find it easy to tell the difference.
- 12.5.13 For a start, and during the plan period, advertising expenditures should be fixed at not less than 5 percent of sales for each year. Considering the Company's sales volume (chapter 12.3.16 refers) since 1989 and the sales promotion expenses as shown in Table 12d, the 5 percent is not unaffordable.
- 12.5.14 The sales volume for 1991, for example, was USh. 157,154,468. Expenditure on sales promotions for that same year was USh. 5,524,178 which is about 4% of sales. Furthermore, with an aggressive marketing in place, sales volumes are expected to show increases over the plan period.

- 12.5.15 The Company is also to be involved in special promotions which give the customer something extra for buying at UGIL; for example, a gift of a trophy decorated with the UGIL logo, to a school or college that purchases house jerseys in four or more colours for the students of the school. The trophy is to be contested for in inter-house football tournament, for example.
- 12.5.16 **UGIL** should also sponsor some selected sporting events and celebrations in the country; and organise fashion shows since the Company produces fashion products.

12.6. EXPORT

- 12.6.1. The Company has been exporting some of its products for some years now.
- 12.6.2. The main reason which the Company assigns to exporting some of its products is to acquire knowledge and experience about exporting.
- 12.6.3. Export has already been made to some European and African countries, the U.S.A and Canada. The following quantities and volumes have been exported in the past two years:

DATE	QUANTITY (IN PIECES)	PRICE	VOLUME (IN US \$)
26/03/90	6,000	0.90	5,400
22/08/90	20,040	1.10	22,044
20/12/90	27,520	1.10	30,272
19/03/91	20,000	1.10	22,000
TOTAL	73,560		US \$79,716
	=====		=====

- 12.6.4. Inquiries have been received from several countries; and the trend for inquiries has been up over the years.
- 12.6.5. The full list of countries that are offering competing products to customers in Europe, the U.S.A. and Canada is not available. It however includes far East countries like Taiwan and Singapore which are known to produce in mass quantities and therefore enjoy the economies of scale.
- 12.6.6. At the time of the review exercise, UGIL had not achieved its export goal but was hopeful of achieving it. However, in the absence of a stated objective as to how much experience, in which areas of exporting, and within what time period, this goal may forever remain illusive.
- 12.6.7. Furthermore, knowledge and experience in exporting will be acquired at a relatively short time if the Company is directly involved in distributing and promoting its own products. UGIL has not been involved in doing this. Instead, the Company has been shipping its products FOB and has no idea what happens to the products when they get to their destinations.
- 12.6.8. Finally, UGIL is not covering all its costs in some of its exports. According to UGIL'# costing, T-Shirt for export should sell at 2,500/- or more, the dollar equivalent of which is \$2.08 at the then prevailing rate of 1200/- to the U.S Dollar. UGIL however, was selling it at a price far below \$2.08 to C&A of Germany (See Appendix 6).

The question is how long can **UGIL** support this practice in the face of working capital shortage problems it already faces.

- 12.6.9. A low price strategy (if this practice can be so termed) is ideal if the Company wants to dispose of excess or obsolete inventory. It is also generally considered as a short-term strategy. However, considering the Company's present financial situation and in the light of the approach it is using for export (Chapter 12.6.7 refers), setting export price below cost will only plunge the Company into a more serious working capital crises.
- 12.6.10 The price of the Company's export product will depend on the competitive situation, the level of demand in the foreign market for the product and the total cost necessary to market. But it is recommended that the price should be set to cover cost, at least.
- 12.6.11 Besides the low price strategy, the two other basic strategies to choose from are: a high price strategy, and a moderate price strategy. Appendix 11 list the three strategies.
- 12.6.12 In the view of Consultants, exporting is a necessary requirement for UGIL's growth and must be continued. The Company, at the time of IMAS review exercise, was expanding its production capacity.

- 12.6.13 With production capacity increased, and local competition looming, exporting will help increase the Company's overall sales volume and spread out fixed costs.
- 12.6.14 Bearing in mind the Company's working capital problem and therefore its short term financial needs, Consultants recommend that the approach to exporting should be through intermediaries. This is to be pursued alongside exporting direct to companies and organizations that request direct orders.
- 12.6.15 To prepare products for export, it will be important to know the unique characteristics of the export market the Company is targeting and the specific distribution channels that will be utilized. In addition, UGIL will have to determine what, if any, product modifications will be necessary to either meet buyer needs in other countries, comply with foreign government regulations or conform to different technical standards.
- 12.6.16 Furthermore, decidi,, to develop completely new products for a foreign market requires a major investment in research and development, and most likely in production facilities.
- 12.6.17 Packaging will also play an important role in UGIL's export sales. The visual impact of a product might be a critical selling feature. UGIL will need to modify its packaging and labelling to increase the products appeal.

- find intermediaries
- determining what would be required to design and package products specifically for expert.
- 12.6.21 **UGIL** should have a written down export policy which states, among other things, the goal of exporting and the percentage of the Company's males that will be in exports every year.

12.7. MARKETING INFORMATION PROCESSING, STORAGE AND RETRIEVAL

- 12.7.1. At UGIL, the statistical section is responsible for marketing information processing, storage and retrieval.
- 12.7.2. While there is no problem of proximity and there were no questions about the capabilities of the statistical staff and their readiness to work, the marketing records they keep do not readily serve the needs of the Marketing Department.

237

APPENDIX 4

ないない、四美

UNITED GARMENT INDUSTRY LIMITED INTERVIEW WITH THE PRODUCTION MANAGER

Department not properly manned - no leadership. The rest of the staff is junior. They are not giving us any strategies - they do not tell us about fashion, etc. etc.

First, we enjoyed monopoly - so the markets were open - no marketing needed. The department is therefore relaxed. But today, there is a change so they have to be aggressive.

In the past, we had stores all over the country. But after the wars and we were looted, we had to stop operating the stores.

Budget is never made use of because money has been no money. Even we are not able to get to all the institutions within our reach (Kampala).

Export

They determine the price. We are producing at a lost. Within PTA, we have not done much to get markets. Those who come here come by themselves. Zaire, Randa, Burundi, Tanzania (they do not have knitting factories, they order from France). Send people there to prospect for buyers. They go with samples.

Q : Do you think a leader at Marketing Department will solve the problems?

Ans: It will be better than it is now.

Q : Do you think they need to research?

Ans: Every Marketing Department needs to do that.

APPENDIX 4 CONTD..

Q : Where do the customers go to place orders?

Ans: Marketing. And they bring them here for technical discussion.

Q : How about the items in the store? Ans: We turn to the trend of the time.

Q : So buggy is your own innovation?

Ans: Yes. When the Europeans come with their designs we copy them.

Q : How about the quantity to be produced? Ans: It is determined by the storage capacity.

Q : How do you produce?

Ans: Marketing rarely advise us. Marketing should be taking technical people, so bring in professionals.

Q : Have you produced something that marketing said will not sell? Ans: Yes. We made some track suits which were not selling. There was also competition.

Q : Why did you try it at all?

Ans: We thought it is part of sportswear so we thought they would like it but they preferred outside one.

Q : Do you think they will buy it if we improve quality?
Ans: Yes. If we blend it. But if it is 100% cotton people will not like. Polyester must be in (ie blended).

Q : Do you have any designers in your area?

Ans: Yes. But for ladies wear only.

Q : Why was she not sent to the Marketing Department?

CHAPTER 13.0.

ORGANIZATION STRUCTURE

239

APPENDIX 4 CONTD..

Q : Your capacity, is it enough? Ans: Yes. Even excess

: So production will not be a problem if marketing and inputs

are there?

Ans: Yes.

- 13.2.2. A market research should precede product decisions when necessary.
- 13.2.3. Products that make high contributions to sales and have high turnover rates should be produced.
- 13.2.4. Production should be planned to meet the demand on the markets.

13.3. PRICING PROBLEMS

- 13.3.1. Prices should not change everyday just because input prices change everyday.
- 13.3.2. Customer and competitor claims should be verified on the basis of market information.
- 13.3.3. Comparative advertisement should be used.

240

APPENDIX 5

- 13.4.3. Use Commission Agents for upcountry consumers.
- 13.4.4. The formation of an Advisory Council of selected Commission Agents.

13.5. ADVERTISING AND SALES PROMOTION

- 13.5.1. Seek acceptance of the Company and its products.
- 13.5.2. The Marketing and Sales Manager should select and schedule advertising media.
- 13.5.3. 5% of sales should be allocated for advertising.
- 13.5.4. Promotion through gifts should be encouraged.
- 13.5.5. Sponsor sporting events and fashion shows.

13.6. **EXPORT**

- 13.6.1. A written down export policy.
- 13.6.2. Exporting should be continued.

241

APPENDIX 6

UNITED GARMENT INDUSTRY LIMITED INTERVIEW WITH CHIEF ACCOUNTANT 18/06/92

The Department is (now) badly manned

- no substantive Marketing Manager
- people under him are very junior (inexperienced)

Has lacked the vigour of selling than marketing

- and research
- no promotion campaign
- marketing is totally lacking
- the staff does not have enough marketing background.

The advantage we have with our products

- the knitting if peculiar in Uganda
- so we have a competitive advantage
- we are not making use of this advantage.

We have tended to rely more on upcountry shops.

- We should ourselves work for markets in the country .
- We have observed some are coming themselves. If we do marketing, we will have plenty.

The status is marketing now. We changed it from sales to marketing.

- Q : Any efforts to reactivate?
- Ans: We have been on them all the time. But we see stock pilling up.
- Q : How much do you spend on these shops?

<u>Deposits</u> per month is about 10ml <u>Deliveries</u> per month is about 5 - 10ml

Export (one time) ago.
Once every 2 months we made a delivery of one container containing about 35k T-Shirts at \$1.1 per T-Shirt.

We have not been exporting since about a year ago. This is because they wanted us to improve on quality.

Our problem is on the price. We have not agreed on one. The price issue has been controversial. According to our costing, it should sell about 2500 divided by 1200 gives us \$2.08. But then we are constrained because other manufacturers can offer them at .7 to 1 dollar per suit. So we are just making a break through to the external market by offering them at their price.

Q : So how are you going to follow up to get the markets? Ans: If funds become available, our marketing should be sent abroad to find markets. They will also attend trade shows.

Q : Selling below cost in export, what is the strategy to bargain for more or reduce cost?

Ans: As we improve the quality especially on the polo, we can get \$2.5 for one. They also want other items so as we develop the products we will be selling at competitive prices.

The yarn has a better price but the problem is we have not had a serious buyer (in substantive quantities).

We have improved on the quality of sewing and shrinkage. If the designs improve we hope to get a better price.

The long term objective is for us to develop our own name.

(Vili) Trousers

(ix) Safari Suita (x) Executive Suita

(xi) Ladies Drennes and Skirts

2. Product Line:

The items produced are classified under one product line depending on their similarity as below:-

- (i) Product Line for T-Shirts
- (ii) Product Line for Mans and Ladies Pants
- (iii) Shirts Product Line
- (iv) Trougers, Safari Suits and Executive Suits
- (v) Product Line for Ladies Gresses and Skirts.

243

APPENDIX 7

UNITED GARMENT INDUSTRY LIMITED MARKET EXPANSION STRATEGIES BASED ON FOUR REGIONS AND FOUR SEGMENTS

Four major market expansion alternatives can be identified. These alternatives are presented.

SEGMENTS

CONCENTRATION DIVERSIFICATION

Concentration 1 2

Diversification 3 4

- Strategy 1 Concentrates on specific market segments in a few regions and a gradual increase in the number of markets served. This dual concentration is particularly appropriate when the product appeals to a definite group of similar customers in different regions.
- Strategy 2 Characterized by market concentration and segment diversification.
- Strategy 3 Characterized by market diversification and segment concentration is suitable for firms with a specialized product line and potentia! customers in

Markets in Uganda:

The available markets mostly transact in convenient goods. These consists of, <u>Government Ministries</u>, <u>Social Clubs</u>, and <u>Individuals</u>. Whereby mostly transact in school uniform, sports wear making it convenient for them to buy in the required quantity and quality at any given time. Government Ministries mostly transact in woven like kaunda suits, suits, shirts, etc. For Social Clubs, these transactions enables them for publicity eg. wildlife, golf clubs, etc.

Also, our shop outlets like Kampala, Masaka, Jinja, Mbale, Misindi, Mukono.

Markets Abroad:

At present we are trading with C.A. for the export of T-Shirts, Burundi, and also some yarn was exported to Iran.

3. Products Produced in Ugil:

(a)	T-Shirts	(b)	Track Suits
(C)	Vests	(d)	Underpants
(e)	Underwears	(f)	Shirts
(g)	Cardigans	(h)	Sports Wears
(i)	Dresses	(j)	Nappies
(k)	Collar T-Shirts	(1)	Sun Suits, etc.

247

APPENDIX 9

UNITED GARMENT INDUSTRY LIMITED OBSERVATIONS

 The customer is directed, after receipt of the order slip, to the Cashier's office about 60 meters away to make payment.

For the purpose of speeding up the sales process, we consider it expedient to station the Cashier in Sales Assistant's office.

It is important to notify the FG Storekeeper about this impending order, so that notice of the receipt of the goods in the FG Store can be furnished to the Sales Assistant.

When the above is fulfilled, there will be no need for the customer to go to the FG Storekeeper for checking and verification.

In this case, for the customer to collect the goods he needs only to contact the Sales Assistant.

If the goods are ready, the Sales Assistant will request final payment be made to the Cashier on the basis of which a supply slip can be prepared to the FG Storekeeper making reference to the final payment having been settled and for the order for goods.

The issue of the delivery note to the customer to evidence the issue of the goods should only be undertaken when the goods are finally leaving the FG Shop. The distribution of this note should therefore be restricted to the customer and the security. The security will check the quantity against the

APPENDIX 11

UNITED GARMENT INDUSTRY LIMITED THE THREE BASIC PRICING STRATEGIES

- High Price Strategy A high price strategy is best if the Company is selling a unique or new product, or if it wants to establish a high-quality image by positioning its product as being "top of the line". The advantages of this approach are high profit margins. However, selecting a high price strategy can also limit the product's marketability and will probably attract competition to that market.
- Low Price Strategy A low price strategy is ideal if the Company wants to dispose of excess or obsolete inventory. The low price strategy is generally considered a short-term strategy. Although it tends to discourage new competition and might even reduce the competition's market share, the result will be low profit margins. Moreover, the Company risks giving the wrong impression to the market eg. that it is not serious about a long-term commitment.
- Moderate Price Strategy A moderate price strategy is a sale alternative between the high and low price strategies. It enables the Company to meet the competition and at the same time retain adequate margins and develop market share. Moderate pricing can lead to a long-term position in the market. The disadvantage is that it might encourage existing suppliers to present tough price competition.

UNITED GARMENT INDUSTRY LIMITED DETAILS OF APPROACH

As a first step to achieving the above stated goal, the practice of opening new Company's own store outlets should cease forthwith.

A plan to phase out the existing outlets is to be put in place. The plan is to be carried out in two phases. The first is to phase out the six outlets outside Kampala by the end of 1994. The phase out is to start with the least performing outlets. The second part is to phase out the Kampala outlets by the end of the plan period.

Relatively, these two outlets generate enough revenues per month; they also do not have problems communicating with head office.

In place of the Company's own store outlets, two kinds of agents will be appointed, namely: commission agents or representatives, and independent retail agents.

Each region is to have a regional centre in the regional capital to serve as a hub.

Supply of products to a regional centre will be made direct from the factory and the cost of transportation will be shouldered by **UGIL**.

Independent retail agents in a region will buy their needs of products from the regional centre at wholesale prices and retail them at prices they themselves will set. Cost of transportation to and from a regional certre will be shouldered by the retail agents.

In order not to create a vacuum, the exercise of phasing out the outlets and appointing both the commission agents and the independent retail agents should go side by side in all the towns where the Company's own store outlets are already located.

Commission agents will receive commission based on a percentage of sales that they make in a month. This percentage is to be determined by Management.

APPENDIX 12 CONTD..

The responsibilities of a commission agent will include the following:-

- Hold goods in own warehouse or store but will not take title to goods.
- Identify and assist in the selection of independent agents.
- Can sell goods only to appointed independent agents.
- Must not sell competing goods.

The responsibilities of the independent retail agents will include the following:-

- Supply information to the regional representative on fast moving items.
- Supply information on the trend and preferences of customers.

UGIL should increase customer awareness of distribution
outlets through advertisements.

PART III

SUMMARY OF MAIN RECOMMENDATIONS,
DETAILS OF ASSISTANCE ON
CORPORATE PLANNING, FINANCE AND
ACCOUNTING AND MARKETING
ON TUMPECO

CHAPTER 14.0. SUMMARY OF MAIN RECOMMENDATIONS

CORPORATE PLAN REPORT ON THE UGANDA METAL PRODUCTS AND ENAMELLING COMPANY LIMITED

14.0. SUMMARY OF MAIN RECOMMENDATIONS

14.1. ORGANIZATION STRUCTURE

A re-organization of the Organization Structure of TUMPECO to remove one-to-one reporting relationships as well as to improve the overall effectiveness and efficiency of operations is recommended.

14.1.1. Marketing Department

The Marketing Department is to be re-organised into three sections which will be responsible for Sales, Marketing Services and Exports.

The procurement function should be moved from the Marketing Department and placed under a new department, the PRODUCTION AND ENGINEERING SERVICES DEPARTMENT.

14.1.2. Production Department

The quality control function is to be removed from the Production Department to make it more effective. It is recommended that the quality control function should be placed under a new department, the PRODUCTION AND ENGINEERING SERVICES DEPARTMENT.

14.1.3. Production and Engineering Services Department

It is recommended that a Production and Engineering Services Department should be set up to handle such functions as quality control, material requirements planning and procurement, production planning and control, work study and methods improvement as well as product research and development.

14.1.4. Accounting Department

It is recommended that the Accounts Department should be re-organised into three sections to handle the functions of Financial Accounting, Cost . Accounting and Budgeting/Management Information.

The creation of the Budgeting/Management Information Section will facilitate the preparation of management information reports after analysis of variances from planned targets and thus make it possible for management to steer the Company's operations towards achievement of its goals.

14.1.5. Internal Audit Department

The Internal Audit Department should be strengthened through the appointment of a suitably qualified and experienced person to fill the position of INTERNAL AUDIT MANAGER.

The Department should be re-organized into two main sections to undertake the functions of pre- and post-auditing of transactions as well as internal control systems review and investigation of fraud cases.

14.1.6. Personnel Department

This Department handles all personnel as well as administrative matters of the Company.

In view of the volume of work in respect of both personnel and administrative matters, it is recommended that the Personnel Department should be re-organised into a PERSONNEL AND ADMINISTRATION DEPARTMENT with clear separation of administrative and personnel duties.

Two assistants to the Personnel and Administrative Manager, one with responsibility for all personnel matters and the other with responsibility for administrative matters will be required.

14.2. HUMAN RESQUECES MANAGEMENT

14.2.1. Recruitment

It is recommended that an Application Form for Employment should be introduced, which must be completed by all applicants prior to their being offered appointment.

It is further recommended that an Interview Assessment Form should be introduced into the Company and completed by all members of interview panels which are set up to interview prospective staff, prior to their appointment.

14.2.2. Confirmation

A Pre-Confirmation Check-List is recommended to be introduced to guide the Personnel Records Clerk to ensure that all necessary requirements in terms of

personnel records have been fully satisfied, prior to arranging for new staff to be confirmed as permanent employees.

14.2.3. Grading of Staff

A new job grading system is to be introduced after evaluation of all jobs to ensure that job grades are uniform intra-departmentally as well as inter-departmentally.

14.2.4. Manpower Training and Development

On-the-job training programmes should be drawn up for employees in various sections of the Company and their response to such training monitored through use of a new On-The-Job Training Progress Report Form.

External training courses or vestibule sessions organized internally should be arranged for employees of the Company to help close "Training Gaps" that become apparent as a result of the introduction of a system of continuous monitoring of employees responses to on-the-job training.

14.2.5. Evaluation of Work Performance and Conduct of Employees

It is recommended that an employee performance and conduct evaluation system should be introduced under which the work performance and conduct of employees will be monitored continuously throughout the year and employees assisted to improve upon their areas of weak assessment.

Towards this end, an appraisal system based upon Management by Objectives should be introduced.

An Objectives Form, a Critical Incidents Form and an Employee Performance Evaluation Form are to be introduced for use in appraising the work performance and conduct of all staff.

14.2.6. Corporate Planning

It is recommended that detailed action programmes to be followed by various sections of the Company in order for the Company to achieve its long term goals of profitability and growth should be prepared with specific time targets for completing specific assignments.

Towards this end, it is recommended that the detailed action programmes suggested by the consultants should form the basis of current and future action programmes.

Re-planning should also be done to reflect changes in the Company's environment and in its internal strengths as well as weaknesses.

The Corporate Plan should form the basis of preparing short-term development plans for the Company.

CHAPTER 15.0.

COMPANY BACKGROUND

15.0. **COMPANY BACKGROUND**

15.1. **OWNERSHIP AND BRIEF HISTORY**

15.1.1. The Uganda Metal Products and Enamelling Company Limited (TUMPECO) was incorporated in 1956 and started production in 1957. The Uganda Government is the sole shareholder with 225,000 ordinary shares, each of which is valued at 0.20 Ush.

The Company's paid up capital therefore totals 45,000 USh.

15.2. TYPE OF BUSINESS AND MISSION OF TUMPECO

15.2.1. The Uganda Metal Products and Enamelling Company Limited manufactures turniture such as spring beds and hospital equipment as well as other products like reflective signs, including car number plates and enamelware.

PRESENT STATE OF TUMPECO BUSINESS AND IMAS RECOMMENDATIONS

15.3.1. Organization Structure

The Organization Structure of TUMPECO at the time of the IMAS Technical Assistance Programme is shown in Appendix 1.

Reporting relationships dictated by this Organization Structure were not very clear and, in any case, did not provide the close link between the critical interfaces of the Company's operations that one would normally expect.

For example, there is a poor link between the Production Department and the Stores or Supplies Section which is placed under the Marketing Department.

In addition, the Purchasing Officer has physical custody of items ordered. Apart from the poor interface between production and the procurement of inputs for production that this arrangement provides, it also prevents the Marketing Department from concentrating on the critical aspects of marketing such as selling, distribution, research, sales promotion and advertising as well as pricing.

Furthermore, important industrial engineering functions such as research and development of new products, work study and methods review, production planning and control, maintenance planning and control, material requirements planning and quality control are either non-existent or have been given a low profile organizationally.

One-to-one reporting relationships exist within some of the departments of the Company such as in the Marketing Section of the Marketing Department, the Security Section of the Personnel/Administration Department, various sections of the Production Department and within the Internal Audit Department.

These one-to-one reporting relationships tend to make the positions of affected officers virtually redundant as they merely pass documents/reports/memoranda/

decisions up or down between their superior officers and their immediate subordinates.

There is also no clear separation between the personnel functions and the administrative functions in the Personnel/Administration Department.

With a view to removing the weaknesses inherent in the present organizational framework which adversely affect overall effectiveness and efficiency, a number of changes in the Present Organization Structure were proposed by IMAS and discussed with the management of TUMPECO. Agreement was reached on implementation of the proposed changes with the Management of TUMPECO.

These changes which are shown in the Proposed Organization Charts in Appendices 2 to 8 are highlighted below:-

15.3.2. Personnel/Administration Department

Under the Proposed Organization Chart, all personnel functions are separated from administrative functions with each of the two sections under a Personnel Officer and Administrative Officer respectively.

This arrangement is expected to remove the weakness in the present structure which makes the Personnel Officer attend to numerous administrative matters thus allowing him little time to attend to important personnel matters such as manpower training/development and staff performance appraisal.

It is recommended that the job description and manspecification of the Head of the Personnel/Administration Department should be changed to require the incumbent to undertake all Company secretarial duties.

Accordingly, it is recommended that the Head of the Personnel/Administration Department should be redesignated as the Personnel/Administrative Manager and Company Secretary.

A suitably qualified and experienced person should be appointed to fill this new position while the Officer currently acting as Personnel/Administrative Manager should be redeployed within the department as Administrative Officer.

15.3.3. Production Department

The structure of the present Production Department has been largely maintained in the Proposed Organization Chart as a result of the good interface between production and maintenance activities. However, the present arrangement under which the Quality Controller (Not at Post at the time of the IMAS Technical Assistance) reports to the Production Manager is not considered the best arrangement since sub-standard products are likely to be passed as okay if the Quality Controller is not able to act independently as a result of the strong influence of his boss, the Production Manager.

There is ample evidence to suggest that the Quality Control Function at TUMPECO has been poor in the past since the quality of most of the finished goods stocked in the Finished Goods Store at the time of the IMAS Technical Assistance was very poor.

TUMPECO products could therefore not move or be sold quickly or at prices that are high enough to provide contribution to overheads and profits at the desired levels.

Thus, the Quality Control Function has been placed under a new position of Production and Engineering Services Manager in the Proposed Organization Chart.

15.3.4. Production and Engineering Services Department

In the Proposed Organization Structure, functions which are considered vital to the successful achievement of the objectives of TUMPECO in the production area such as quality control, research and development, production/maintenance planning and control, work study and methods review, material requirements planning have been placed under a new department, the Production and Engineering Services Department.

Furthermore, with a view to improving internal checks and control, the key activities involved in the procurement of inputs such as ordering, payment authorization, payment and physical custody of inputs ordered have been separated and placed under different departments/sections.

As a result, all activities associated with ordering of inputs, follow-up of orders and clearing of goods ordered, on arrival, have been made the responsibility of the Purchasing Officer, who is to report to the Head of the Production and Engineering Services Department.

It is expected that the functions within the Production and Engineering Services Department will be more effectively and efficiently carried out within TUMPECO if suitably qualified and experienced persons are redeployed from within the Company or recruited, where absolutely necessary, to fill the new positions within this department. In the short term, the Chief Engineer whose position has not been provided for in the Present Organization Structure should first be trained and thereafter, redeployed to fill the position of Production and Engineering Services Manager.

15.3.5. Marketing Department

A major weakness of the marketing function at TUMPECO is the complete inability of the Marketing Department to undertake any meaningful marketing activities to secure orders or promote sales of the Company's products.

The success of the recommendations made in this report will depend on how a strengthened Marketing Department pursues an aggressive marketing programme to enable the Company achieve its sales targets at the lowest cost possible.

With a view to enhancing the effectiveness of the Marketing Function at TUMPECO, all activities, which are not directly related to the Marketing of TUMPECO products have been removed from the list of responsibilities of the Marketing Department. Thus, the Purchasing Function has been removed and placed under the Production and Engineering Services Manager and the Inputs/Supplies Storekeeper placed under the Production Department.

With regard to marketing activities, all selling activities have been separated from marketing services such as sales planning/control, market research and sales promotion/advertising in order to improve reporting relationships and enhance effectiveness.

Thus, a position of Sales Officer has been created to make this Officer directly responsible for selling the Company's products while another position of Marketing Services Officer has been created to provide the marketing support services, which have been enumerated above, within the department.

A section within the Marketing Department to be responsible for exports has also been created to facilitate export of the Company's products, in future.

15.3.6. Accounts Department

The existing organigram for this Department has been adopted, intact, within the Proposed Organization Structure.

However, in view of the integrated planning, budgeting, costing, reporting and controlling system that is to be introduced, the present position of Cost Accountant is to be upgraded to Management Accountant to ensure the provision of appropriate management information reports after periodic analysis of operations in the light of planned targets.

It is recommended therefore that the Cost Accountant should be trained to enable him improve his knowledge and skills (this is to include knowledge of EDP) to enable him discharge the responsibilities of Management Accountant effectively and efficiently.

The position of Chief Accountant (a grade title), which should be redesignated as Finance and Accounts Manager in order to ensure consistency in position titles given to Heads of Department, should also be strengthened through training in the areas of Electronic Data Processing (EDP), Working Capital Management and Financial Planning/Reporting.

Finally, the Financial Accountant should also receive training in the aforementioned areas in order to improve upon his effectiveness and efficiency.

15.3.7. Internal Audit Department

The Internal Audit Department has hitherto been given a low profile organizationally. The incumbent Internal Auditor lacks the necessary knowledge and experience to effectively and efficiently undertake the duties expected of the Company's Internal Auditor in the medium term.

It is therefore recommended that the department should be strengthened through the appointment of a suitably qualified and experienced person as Internal Audit Manager. Furthermore, the present Internal Auditor should be trained and re-designated as the Internal Audit Manager's Assistant.

In addition to the traditional internal auditing functions of pre- and post-auditing of transactions, it is recommended that the Internal Audit Department should also undertake systems audit to ensure that internal control, internal checks and balances within TUMPECO are enhanced and various management information reports are prepared as well as submitted to management on time.

15.4. INCREMENTAL COST OF PROPOSED ORGANIZATIONAL CHANGES

15.4.1. Most of the organizational changes recommended could be implemented through redeploying staff from within TUMPECO. However, the following positions will have to be filled through recruitment of outsiders.

	POSITION	DEPARTMENT	INCREMENTAL COST OF RECRUITMENT USH.	AVERAGE COST SAVINGS OR * INCREMENTAL REVENUE FROM RECRUITMENT USH.	MET BENEFIT/ COST OF RECRUITHENT USH.
1.	Personnel/Administrative Manager and Company Secretary	Personnel/ Administration	2,004,000.00/Yr.	2,510,000/Yr.	506,000/Yr.
?.	Harketing Hanager	Harketing	- (Replacement)	50,000,000/Yr. (20% of 1991 Sales)	50,000,000/Yr.
3.	Sales Officer	Marketing	731,040.00/Yr.	37,000,000/Yr. (15% of 1991 Sales)	36,268,960/Yr.
4.	Quality Controller	Engineering Services	1,345,200.00/Yr.	12,500,000/Yr.	11,154,800/Yr.
•	Internal Audit Manager	Internal Audit	1,345,200.00/Yr	6,275,000/Yr	4,727,800/Yr.

TOTAL USH. 102,859,560

* BENEFITS FROM RECRUITMENT

- 1. Reduction in high turnover of skilled staff savings in fees paid to external Company Secretary, increase in productivity of staff as a result of improved motivation and retention of skilled hands.
- 2. Increase in sales volume of all products, improved market research and satisfaction of customer preferences leading to higher demand for TUMPECO products, more effective sales planning and control of sales.
- 3. Higher sales of TUMPECO products and reduction in selling and distribution cost.
- 4. Petter and improved quality of TUMPECO products leading to higher prices and increased sales volumes.
- 5. Improved internal control to prevent misappropriation of company resources and assets leading to savings from reduced rates of diversion of raw materials, finished products and lower rates of stealing.

15.5. CAPACITY UTILIZATION

15.5.1. The Uganda Metal Products and Enamelling Company
Limited (TUMPECO has six (6) main production shops with
installed capacities as detailed below:

	SHOP	INSTALLED CAPACITY	NO. OF SHIFTS	PRODUCTS
1.	Enamelling	2500 pcs/day or 2.2 million pcs/year	3	Enamelware
2.	fool foom	35 pcs/day or 9000 pcs/year	1	Mospital Equipment and Steel Furniture
3.	Vono Bads	70 pcs/day or 18000 pcs/year	2	Steel Beds
4.	Vono Mattress	14 pcs/day or 3600 pcs/year	1	Spring Mattress
5.	Carpentry	14 pcs/day or 3600 pcs/year	1	Mooden Beds and Furniture
6.	Signs	4333 pairs/day or 52,000 pairs/yr.	I	Number Plates

- 15.5.2. In order to set realistic targets for the Company to achieve during the period from 1993 to 1995 (both years inclusive), IMAS Consultants assisted Management of TUMPECO to determine levels of practical capacity for the above mentioned shops as well as levels of capacity utilization that could be achieved over the aforementioned three year period given the constraints to be faced by the Company during the period.
- 15.5.3. In arriving at the practical capacities of the various shops of TUMPECO, the following methodology was used:-
 - (i) State installed capacity of plant
 - (ii) Subtract provision for breakdowns and repairs (An adjustment of 10% of installed capacity was provided for). In the case of the signs shop, a provision of 5% was made to cover breakdowns and repairs.

- (iii) Sub Total I (i.e. (i) minus (ii) above).
- (iv) Less provision for planned/preventive maintenance, weekends and public holidays. (This was determined by taking a provision for 152 days to cover weekends, public holidays and planned/preventive maintenance ie. 152 = 41.64%

The provision of 41.64% was then applied by subtracting same from 100% and multiplying the result, (58.35% by Sub Total I)

- (v) Operations (i) to (iv) resulted in the practical or effective capacity.
- 15.5.4. Using the above stated methodology, the following practical capacities were determined for the various shops of TUMPECO.

	SHOP	PRACTICAL CAPACITY
	Enamelling	393863 pcs/year
2)	Tool Room	4727 pcs (beds) or 9454 pcs of
3)	Vono Boda	stackable chairs/year
4)	Vono Mattress	4727 pcs/year 1891 pcs/year
	Carpentry	1891 pcs (beds)/year
6)	Signa	27308 pairs/year

15.5.5. Based on the above stated practical capacities and the constraints that are expected to be faced by the Company during the period 1993 to 1995 (these constraints are highlighted elsewhere in this report), the following levels of capacity utilization were considered achievable over a three year period. The actual levels of capacity utilization at the time of the IMAS Technical Assistance together with estimates of production for the year 1992 are also shown below:

	SHOP	ACTUAL PRODUCTION JAN. TO APRIL 1992	ESTIMATED TOTAL PRODUCTION JAN. TO DECEMBER 1992	ACHIEVABLE CAPACITY UTILIZATION LEVELS
1)	Enamelling	_	_	304000
2)	Tool Room	607	_	384000 pcs/yr
۷,	1001 ROOM	697 рсв	2091 pcs	5760 pcs
•				(Chairs)/yr
3)	Vono Beds	374 рсв	1122 pcs	2300 pcs
4)	Vono Mattress	16 pcs		
5)	Carpentry		48 pcs	480 pcs
-,	carpancry	133 рсв	399 pcs	3600 pcs
٠.		(Chairs)	(Chairs)	(Chairs)
6)	Signs	1293 pairs	9000	
			7000	24000 pairs

15.5.6. In the light of the figures shown above, the following percentages of practical capacity and projected output for 1992 as a percentage of achievable capacity utilization levels were determined.

	3NOh	PERCENTAGE OF ACHIEVABLE CAPACITY UTILIZATION PROJECTED TO BE ACHIEVED IN 1222	PERCENTAGE OF PRACTICAL CAPACITY TO BE ACHIEVED IN 1992		
1) 2)	Enamelling Tool Room	-	-		
3) 4) 5) 6)	(Stackable Chairs) Vono Beds Vono Mattress Carpentry (Chairs) Signs	36.3% 49.0% 10.0% 13.3% 37.0%	22.11% 23.7% 2.5% 7.5% 32.9%		

- 15.5.7. An analysis of the bottlenecks that would affect achievement of the above stated capacity utilization levels was made in terms of the following bottlenecks:
 - i. Working capital tied up by the products produced in each shop.
 - Machine hours used up by the production of each product in each of the six shops of <u>TUMPECO</u>.

- iii. Labour cost associated with the production of each product in each of the six shops of TUMPECO.
- 15.5.8. The analysis showed that working capital tied up by products of TUNPECO before they were sold and relative revenue collected in the form of cash was the most critical bottleneck.
- 15.5.9. In view of the bottleneck posed by working capital, production of products which tied up less working capital and turned over more quickly in terms of sales as well as provided attractive contribution margins was to be emphasized in determining the product mix.
- 15.5.10 Having regard to the foregoing, it was decided by management to set an objective of attaining the achievable capacity utilization levels within a three-year target period (1993 to 1995) as follows:-

	9 9 0	GAP BETHEEN ACHIEVABLE AND ACTUAL 1992 CAPACITY UTILI-	TOTAL UNITS TO BE PRODUCED	ACTUAL PRODUCTION AS A PERCENTAGE OF ACHIEVABLE PRODUCTION				
		ZATION LEVELS		1 <u>993</u>	UNITS	1994	UNITS	1995
i }	Enamelling	100\$	128000	33 1/31	256000	66 2/31	384000	1001
2)	Tool Grew (Chairs)	63.7%	3314	57\$	4537	79%	5760	1001
3)	Vons Beds	51.0%	1515	66\$	1908	275	2301	1001
4)	Vono Mattress	90.0%	192	40%	336	70%	480	1001
5)	Carpentry (Chairs)	86.7\$	1266	421	2133	713	3000	
e)	Signs	63.0\$	12000	50%	15000	633	18000	100% 75%

15.5.11 On the basis of the foregoing, Management set for itself an objective of achieving the following total average levels in terms of percentages, by which actual capacity utilization levels would be increased during 1993, 1994, and 1995.

STAGE	YEAR	PROJECTED AVERAGE PERCENTAGE INCREASE IN ACTUAL CAPACITY UTILIZATION LEVELS FOR ALL TUMPECO SHOPS WITH REFERENCE TO ACHIEVABLE CAPACITY UTILIZATION LEVELS BY THE END OF 1995
1	1993	20%
2	1994	25%
3	1995	30%

15.5.12 Thus, it is expected that by 1995, the achievable capacity utilization levels would have been attained.

15.6. STAFF STRENGTH

- 15.6.1. At the time of the IMAS Technical Assistance, Tumpeco had a staff strength of 137 made up of 46 senior members of staff and 91 group employees or junior members of staff.
- An analysis of the total labour force showed a situation of TUMPECO having "too many chiefs and too few Indians". In other words, there were too many supervisors and managerial personnel for the limited number of personnel directly engaged in the production of the Company's goods.
- 15.6.3. At the time of the IMAS survey, there were 2.9, or, say, 3 junior members of staff for each senior member of staff. The position became worse if an adjustment was made for the number of junior members of staff who were not directly engaged in production or marketing related activities.

- 15.6.4. The number of junior staff not directly engaged in production or marketing activities was 26 (i.e. 11 for security and 15 for administration). If the total number of staff in this category (i.e. 26) is subtracted from the total number of junior staff in TUMPECO (i.e. 91), the resulting figure of 65 represents the number of staff directly engaged in production and marketing related activities.
- 15.6.5. When the total number of senior and supervisory staff in TUMPECO (i.e. 46) is compared to the number of junior staff directly engaged in production and marketing related activities (i.e. 65), then the Senior Staff to Junior Staff Ratio worsens to 1:1.4.
- 15.6.6. Clearly, there is the need to improve this ratio as one would normally expect a ratio of Senior/Supervisory Staff to Junior Staff of at least 1:6 in a Company engaged in activities similar to the ones performed by TUMPECO.
- 15.6.7. There is therefore the need to reduce staff of TUMPECO particularly, those working in the areas of Administration, including staff engaged for the cleaning of the compound and security.

15.6.8. One way of achieving this objective is to re-deploy staff from these areas to fill any of the 46 positions indicated below which will have to be filled when the enamelling line is re-opened**.

** ADDITIONAL STAFF TO BE ENGAGED WHEN THE ENAMELLING LINE IS REOPENED

SECTION NUMBER OF STAFF TO BE ENGAGED 1) PICKLE SHOP 3 - Attendants MILL ROOM 2) 2 - Attendants 3) PRESSING STORE 1 - Storekeeper 1 - Porter 4) PRESSING MACHINE 2 - Operatives SWILLING 9 - Ground Coat 51 - Cover Coat 6) BEADING 5 - Operatives 7) BOX FURNACE 4 - Operatives CONTINUOUS FURNACE 2 - Loading Hands 2 - Off Loaders INSPECTION 1 - Box Furnace 1 - Continuous Furnace 101 SPRAYING Sprayer 11) PACKING Packoru **TOTAL** 46

15.6.9. In addition, it is recommended that a work study exercise should be carried out at TUMPECO to determine appropriate levels of senior/supervisory staff that will be required to effectively and efficiently manage the operations of the Company. Thereafter, supervisory personnel that are found to be surplus to the Company's short to medium-term requirements should be laid off.

15.7. HUMAN RESOURCES MANAGEMENT

The Human Resources Management function at TUMPECO was found to be very weak by the IMAS team of Consultants. Consequently, technical assistance and guidance was provided to enable the Personnel/Administrative Manager and the Personnel/Welfare Officer to improve upon areas of weakness in their management of human resources at TUMPECO.

During the IMAS Technical Assistance Programme, it was observed that staff morale was very low with the Company having experienced a high rate of labour turnover in the years preceding the Technical Assistance Programme.

The low morale of staff was observed to be one of the main reasons for low productivity in the various production shops of the Company. It was found that no comprehensive personnel programme covering recruitment, training and manpower development, wages and salaries administration, staff performance appraisal, industrial relations and welfare was followed by the Company on a consistent basis.

Thus, staff and workers could not easily link achievement of the Company's goals and objectives with the attainment of their own personal objectives. This situation led to instances where some workers placed their personal interests above that of the Company thus leading to their taking actions which resulted in the Company incurring otherwise avoidable costs or loosing revenue.

The need for the Company to implement a comprehensive personnel programme was therefore stressed. Specific areas of deficiencies which were observed and the training/guidance given to staff in the Personnel Department of TUMPECO are as follows:-

15.7.1. Recruitment Procedure

With the recruitment of staff, it was observed that the legal requirement that all recruitment of staff should be through the nearest employment centre was not being observed.

The need to fully observe all legal requirements in recruitment of personnel by the Company was stressed.

Furthermore, it was observed that prospective employees were not made to fill in Application Forms for employment which are signed by them as a basis of the contract of appointment between the prospective employees and TUMPECO.

During the interview of prospective applicants, no Interview Assessment Forms are completed by Interview Panel Members. There is therefore no way of verifying the results of interviews to ensure that such interviews were objectively carried out and candidates properly assessed.

Assistance was therefore given by the IMAS Consultant to the Personnel Department of TUMPECO to design an Interview Assessment Form for use to appraise or assess prospective employees who are interviewed in future. (Please refer to a copy of this Form in Appendix 9).

こととかいいというなから

In addition, the IMAS Consultant guided the Personnel/Administrative Manager of TUMPECO to design an Application Form for Employment, a pre-printed Letter for obtaining Referees Reports on Prospective Employees and a pre-printed Pre-Confirmation Check List, which will be used to ensure that all necessary action has been taken before employees on probation are confirmed as permanently employed staff. Copies of these forms can be seen in Appendices 10, 11, and 12.

15.7.2. Manpower Training and Development

No structured staff training programmes were prepared for staff of TUMPECO before the IMAS Technical Assistance Programme. The only training given to staff on-the-job was rudimentary and not structured to ensure proper career development and increase in productivity. Furthermore, off-the-job training courses, which staff of TUMPECO were sponsored to attend from time to time, were selected on an ad hoc basis and were not selected to fill previously identified training gaps in employees' response to on-the-job training programmes.

Another weakness was that the Personnel/Administrative Manager did not at any point in time know the sort of onthe-job training that staff in various departments of the Company were being given.

In order to help remove these weaknesses, the IMAS Consultants assisted the Personnel/Administrative Manager of TUMPECO to design an On-The-Job Training Progress Report Form which would be sent to other Heads

of Department from time to time for them to give progress reports on the training programmes being followed by staff in their departments. (Please refer to Appendix 13 for a copy of this Form).

In addition, the need for staff of TUMPECO to be made to go through structured training programmes to enable them acquire new knowledge as well as improve upon their skills and thereby help to increase their productivity was stressed.

15.7.3. Appraisal of Performance of Staff

It was observed at the beginning of the IMAS Technical Assistance that the performance of staff at TUMPECO was not assessed on any consistent and objective basis.

As a result of the absence of an objective performance evaluation system in the Company, staff did not associate achievement of the Company's objectives with achievement of their personal objectives. Furthermore, staff of the Company could not link increases in productivity with corresponding increases in their remuneration.

IMAS Consultants therefore assisted the Personnel Department of TUMPECO to design basic forms which could be used to assess the performance of staff in order for them to be positively reinforced through such means as promotion, cash awards/bonuses and increments as well as for correction of deficiencies in their performance

arising from lack of training, poor performance or other areas of weak assessment of the staff whose performance is evaluated.

With the introduction of the new performance evaluation system in TUMPECO, there can now be an objective basis of assessing the performance of staff to be used by all Heads of Department.

The system designed with IMAS technical assistance consists of a Staff Performance Evaluation Form, which would be completed on an annual basis, at the end of each financial year, and is supported by an Objectives Form that specifies targets for employees to achieve by the end of specific periods and a Critical Incidents Form, which is to be completed quarterly during the year by all heads of Department in respect of the work of all staff in their departments.

The Critical Incidents Form would list all the positive achievements of staff as well as the negative incidents they have been involved in during the quarter under review.

The Objectives Form, Critical Incidents Form and the Employee Performance Evaluation Form are shown in Appendices 14, 15 and 16.

15.7.4. Results Expected as a Result of the IMAS Technical Assistance Programme in the Personnel Area

Following the technical assistance offered by IMAS to the Personnel/Administration Section of TUMPECO, it is expected that Human Resources Management in the Company will henceforth be influenced by the adoption and implementation of the following strategies.

- (i) Implementation of a comprehensive personnel programme covering objective recruitment of staff, remuneration schemes, training and manpower development schemes and appraisal of performance by staff.
- (ii) Improvement of productivity of staff through training and motivation of staff.
- (iii) Improvement in the discipline of staff.
- (iv) Encouragement of teamwork.
- (v) Improvement of wages and salaries administration as well as personnel records management.
- (vi) Development and implementation of incentive bonus schemes based on productivity.
- (vii) Improvement of the terms and conditions of service of staff.
- (viii) Promotion of sound industrial relations and a harmonious relationship between management and workers.

15.8. CONDITION OF PLANT AND EQUIPMENT OF TUMPECO

- 15.8.1. A summary of the condition of plant and machinery of TUMPECO is provided in Appendix 17.
- 15.8.2. Generally, the condition of TUMPECO plant and machinery is in fairly good condition due to the effective maintenance schemes that are followed by the Company.

- 15.8.3. In addition, a policy of actively encouraging the fabrication of parts of old machines which are no longer produced by the original manufacturer has kept such machines serviceable and in good working condition.
- 15.8.4. Inspite of the fairly good condition of the plant and machinery of TUMPECO Limited, the Company's Enamelling Line had not been active for about a year prior to the IMAS Technical Assistance Programme. In order to reactivate the Enamelling Line, spare parts worth about \$19,000.00 will need to be ordered and installed. The spares which are required are as follows:-

		<u>us \$</u>	USH.
1)	Rubber Diaphragm 6' x 4'	600.00	720,000.00
ii)	Furnace Heating Elements	13512.00	16,214,400.00
iii)	H.R.C. Puses	2620.00	3,144,000.00
iv)	Pedding Master No. 40/60 Unit	2093.00	2,511,600.00
		\$18825.00	22,580,000.00
		ESSESSE	

15.8.5. It is recommended that the required parts should be ordered as quickly as possible and the Enamelling Line put back into active production as soon as possible. All other plant and machinery in other shops of the Company can be operated to meet the projected levels of capacity utilization between 1993 and 1995 without any significant levels of capital expenditure.

15.9. BOARD OF DIRECTORS

- 15.9.1. At the time of the IMAS Technical Assistance Programme, TUMPECO did not have a properly constituted Board of Directors. The absence of this very important body for policy formulation, which also provides strategic direction in companies has had very adverse consequences on the operations of TUMPECO.
- 15.9.2. Furthermore, tenure of office of Chief Executives of the Company has, in the past, been brief and characterized by uncertainty. This has made continuity impossible with regard to implementation of approved plans.
- 15.9.3. It is therefore necessary for members of the Board of Directors of TUMPECO to be appointed as soon as possible to oversee and direct all activities of the Company.
- 15.9.4. Furthermore, a Performance Contract should be signed with the Chief Executive and Management of the Company for a specified period to provide them with job security as a means of motivating them to improve upon their performance.
- 15.9.5. Under the Performance Contract, management and staff could be offered incentives based upon the achievement of predetermined targets within specified cost limits.

15.10. CORPORATE PLANNING

Prior to the IMAS Technical Assistance Programme in 1991, The Uganda Metal Products and Enamelling Company Limited had received Technical Assistance from UNIDO/PIES in the area of Corporate Planning.

As a result of this technical assistance, the Company was able to decide on its mission, critical success factors and broad strategies for achieving objectives of the Company.

During the IMAS Technical Assistance, it was observed that even though the Company was being guided by its mission statement and objectives, there was no detailed action programme that was being followed on a consistent basis to guide day-to-day operational activities towards achievement of the Company's objectives.

Consequently, there was no yardstick against which day-to-day activities could be compared to measure the overall effectiveness of activities, in terms of achieving the strategic goals of TUMPECO.

To help remove this weakness and to develop the corporate planning process in TUMPECO up to a stage where short-term development plans as well as day-to-day action programmes are followed and achievements evaluated in terms of objectives of the Company, the IMAS Consultant in corporate planning reviewed various

strategies that could be followed by TUMPECO with the Company's top management. As a result of the review, it was agreed that the following strategies should be followed by various departments of the Company.

15.10.1 Strategies to be Followed by the Administration Including the General Manager's Office

- (a) Oversee preparation and review by the Company of its corporate plan from time to time.
- (b) Arrange for the revised corporate plan to be approved by the Board of Directors.
- (c) Lobby the Ministry of Commerce, Industry and Cooperatives for the Company's Board of Directors to be set up.
- (d) Lobby for the Ministry to appoint an interim Board if constitution of the full Board of Directors is likely to take longer than 31st July, 1992.
- (e) Oversee preparation of annual budgets of the Company which should be based on the Company's corporate plan.
- (f) Ensure financial planning and control is strictly undertaken and followed by the Company.
- (g) Oversee reorganization of the Company along lines recommended by IMAS.
- (h) Chair monthly management meetings to review management information reports.
- (i) Review prices at which raw materials and other inputs are purchased on a regular basis.
- (j) Review prices of finished products from time to time.
- (k) Appraise the work performance of Heads of Department.
- (1) Lobby for re-financing of the Company's loans.

- (m) Ensure that the Company embarks on repayment of outstanding loans and strictly adheres to the agreed repayment programme.
- (n) Press the shareholder to pay for all authorised shares that have not yet been paid for.
- (o) Explore the possibility of entering into a joint venture with other parties, who would bring in additional funds.
- (p) Convince the shareholder to agree to the Company floating shares for injection of new equity funds.
- (q) Improve public relations and business promotion.
- (r) Lobby for prompt payment of all outstanding and any future government orders.

15.10.2 Strategies to be followed by the Marketing Department

- (a) Arrange for the Department to be reorganized into sales (local and export) and Marketing Services Section.
- (b) Initiate and sustain market research to help determine an optimum sales mix at all times.
- (c) Undertake sales planning and sales controlling.
- (d) Identify and penetrate all potential markets with TUMPECO products.
- (e) Encourage prepayment by customers for TUMPECO products or arrange for cash payments to be made upon delivery.
- (f) Identify market segments and determine sales promotion/advertising that will optimise penetration of these market segments.
- (g) Follow a comprehensive marketing programme covering products, prices, distribution, promotion, advertising and research.
- (h) Train and discipline staff in department.
- (i) Secure sufficient funding for departmental activities.

Strategies to be Followed by the Production Department

- (a) Prepare on an annual basis at the beginning of each year, a bill of material requirements for the year's production.
- (b) Train and discipline staff in department.
- (c) Secure sufficient funding for departmental activities.
- (d) Undertake research and product/process innovation studies to improve upon work methods/procedures and improve overall efficiency.
- (e) Instill cost consciousness in all employees and introduce cost reduction measures.
- (f) Instill safety and efficiency consciousness in all staff.
- (g) Improve upon quality of products.
- (h) Establish production targets and monitor performance to ensure targets are met.
- (i) Explore possibility of introducing night shifts to take advantage of lower tariff rates by the Uganda Energy Board.
- (j) Improve maintenance schemes for all plant, vehicles and equipment.

Strategies to be Followed by the Accounts Department

- (a) Prepare a bankable proposal based upon the IMAS report which should be presented to Creditor Banks for either re-financing of existing loans or rescheduling of loan repayments.
- (b) Follow strictly repayment schedules of all loans.
- (c) Improve systems of financial planning and control.
- (d) Improve working capital management.

- (e) Introduce an integrated budgeting, costing and reporting system.
- (f) Introduce EDP gradually to cover all accounting systems.
- (g) Assist the General Manager to lobby for lower government taxes on imported raw materials and finished goods.

15.10.5 Strategies to be Followed by the Personnel and Administration Department

- (a) Adhere to government rules and laws on recruitment of staff.
- (b) Maintain good relationship with the Workers' Union by executing all agreements reached with the Union on time.
- (c) Maintain good relationship with workers by fair interpretation and application of disciplinary code.
- (d) Review recruitment procedures to ensure objectivity.
- (e) Review, design and introduce forms for appraisal of performance and recruitment of staff.
- (f) Review and introduce induction/orientation programmes for new staff.
- (g) Draw up structured training programmes to be followed by staff.
- (h) Ensure a highly motivated workforce by improving wages/salaries and appraising performance of employees.
- (i) Develop a job grading system to ensure uniformity in job grading throughout the Company.
- (j) Finalize and introduce a comprehensive incentive bonus scheme based upon productivity to cover all staff.

- (k) Prepare a staff manual and an organizational manual.
- (1) Ensure effective and efficient administrative support systems throughout the Company.
- (m) Reinforce security of the Company's assets.

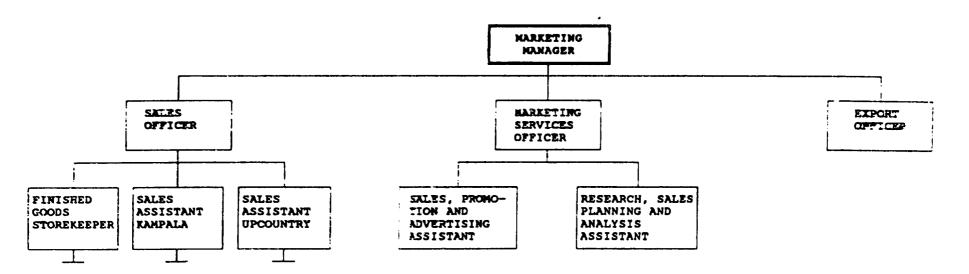

15.10.6 Strategies to be Followed by the Internal Audit Function

- (a) Design Internal Control Questionnaires covering all facets of the Company's operations.
- (b) Test-check all present systems of internal control and submit recommendations for their improvement.
- (c) Review all procedures and management systems to ensure they contribute to optimization of effectiveness and efficiency.
- (d) Monitor intograted planning, budgeting, costing, reporting and controlling systems to ensure management reports expected to be submitted under the system are infact submitted on time and corrective follow-up action is taken at the right time.
- (e) Undertake pre-auditing of all petty cash, cash disbursements, payments by cash or cheque for inputs, spares, stationery and all other materials.
- (f) Undertake post-auditing of all transactions.
- (g) Undertake investigation of fraud and other cases as and when necessary.

15.11. DETAILED ACTION PROGRAMMES

15.11.1 The detailed action programmes that IMAS recommends should be followed by Heads of Department and the General Manager of TUMPECO are shown in Appendices 18 to 23.

CHAPTER 16.0.

INTRODUCTION

FINANCE AND ACCOUNTING REPORT ON THE UGANDA METAL PRODUCTS AND ENAMELLING COMPANY LIMITED

16.0. INTRODUCTION

16.1. BACKGROUND

- 16.1.1. Reference Contract No. BR/UGA/89/001, Public Industrial Enterprises Secretariat. This is a report on the Finance and Accounting Programme carried out for The Uganda Metal Products and Enamelling Company Limited (TUMPECO) between May 19 to 20, 1992 and between May 25 to June 3, 1992 respectively, as part of the Technical Assistance Programme under extension of the above quoted contract.
- 16.1.2. Under this extension programme, IMAS conducted a management audit of the financial and accounting operations of TUMPECO between May 19 to 20, 1992 prior to the task of systems evaluation, evolution and development.

PROGRAMME AIMS AND SCOPE

The programme aimed at the following:-

- 16.2.1. Identifying and recommending areas of potential cost reductions in the Company's operations.
- 16.2.2. Evolving an efficient management information system at TUMPECO which will not only induce cost consciousness at all levels of management, but also enhance commitment for cost effectiveness by all functional heads.

CHAPTER 17.0.

PROGRAMME OBJECTIVES

17.0. PROGRAMME OBJECTIVES

It was expected that by the end of the programme, the Chief Accountant of TUMPECO and his two subordinates working closely with the IMAS Consultant as facilitator would be able to do the following:-

17.1. DEVELOP A COST ACCOUNTING SYSTEM WHICH WILL:

- a) ensure that cost of finished products will not transfer any cost of inefficiencies in production, material handling and valuation, to the ultimate consumer;
- b) provide flexible cost structures that will not only facilitate pricing of the finished goods but also enable cost-volume-profit relationships of product lines to be determined periodically, and at varying levels of capacity utilization;
- c) be adaptable to computerization;
- d) adopt methods of job costing and batch costing suitable for one off orders and customised products, respectively.

17.2. DEVELOP A BUDGETING SYSTEM FOR TUMPECO WHICH WILL:

- a) create responsibility accounting;
- b) motivate high performance by all functions in the areas of cost cutting and profit maximization;
- c) provide instant checks and halts on unplanned spending;
- d) be adaptable to computerization;
- e) provide a feedback mechanism for actual departmental performance in relation to planned performance sanctioned for annual profit plans;

となるないというなまから

17.3. <u>DEVELOP AN IMPROVED REPORTING SYSTEM WHICH WILL:</u>

- a) be capable of identifying and reviewing management information needs at all times;
- b) prescribe management information report formats for all responsibility centres, indicating levels and frequency of reporting;
- c) be adaptable for computerization;
- d) set target reporting dates;
- e) provide opportunities for feedback on reports.

17.4. DEVELOP A DETAILED CONTROLLING SYSTEM WHICH WILL:

- a) utilise an effective financial and management accounting systems and procedures well suited for capturing data required in the processing of basic periodic financial information viz:-
 - Profit and Loss Account
 - Balance Sheet
 - Statement of Source and Application of Funda;
- enhance management control of operations through exception reporting through highlighting deviations of actual performance from planned performance within a budget period;
- c) demand periodic and timely analysis of the Company's business situation in terms of its liquidity, profitability and solvency.

17.5. DEVELOP A FINANCIAL PLANNING SYSTEM WHICH WILL:

- a) enhance top management control of enterprise cash and working capital through the following:-
 - the preparation of weekly, monthly, quarterly and annual cash budgets and more importantly, monthly working capital budget.
 - the preparation of debtors monthly ageing
 - the preparation of monthly analysis of raw material and consumables in stock, identifying obsolete stock, damaged stock and assigning reasons for the conditions of each class of stock.

the preparation of monthly analysis of workin-progress stock, assigning reasons for locking up capital in uncompleted jobs.

the preparation of monthly analysis of finished goods stock at current selling prices, indicating corresponding realizable mark-ups and unrealised sales taxes, if any.

enhance tax planning.

17.6. DEVELOP A LIQUIDITY CONTROL SYSTEM WHICH WILL:

a) provide an ideal measure of the extent to which the Company should be deemed prepared to satisfy all maturing financial obligations under both normal and abnormal operating conditions.

CHAPTER 18.0.

SUMMARY OF CONCLUSIONS AND RECOMMENDATIONS

SUMMARY OF CONCLUSIONS AND RECOMMENDATIONS

18.1. GENERAL

- 18.1.1. TUMPECO'S working capital problems stemmed from lack of planning and policy. In order to overcome the crippling effects of this situation, systems of planning and control have been recommended for handling each item on a working capital structure.
- 18.1.2. The successful implementation of the recommended systems calls for strict discipline on the part of Management. This is because, no amount of loans will ever be adequate to support the needs of the Company, if Management fails to show commitment in allocating the scarce resources in the best interest of the Company.
- 18.1.3. The use of short-term debt as against the expansion of equity is not advantageous for TUMPECO in view of the exceedingly high cost of capital in an inflationary period.
- 18.1.4. The present asset base of the Company warrants a fresh injection of capital from TUMPECO^S shareholders.
- 18.1.5. Pending the receipt of the shareholders' capital, the Company may negotiate for a bank overdraft under total guarantee to be provided by the shareholders.
- 18.1.6. In order to achieve cost efficiency and effectiveness in operations, tool room should merge with carpentry and vono with mattress profit centres.

18.2. COST ACCOUNTING SYSTEM

- 18.2.1. The present standard costing method should be discontinued.
- 18.2.2. The Company should adopt methods of job costing and batch costing suitable for one off orders and customised products respectively, based on actual cost of resources consumed in production.
- 18.2.3. The application of marginal costing technique should be followed under all circumstances to aid decision making.
- 18.2.4. Last-In-First-Out (L.I.F.O) method should be adopted in valuing material issues to production.
- 18.2.5. Labour hourly rate should form the basis for labour cost charge to batch or job production costs.
- 18.2.6. Weekly summary of batch/job costs should be prepared for the General Manager.
- Depreciation charge as component of total fixed cost for break-even analysis, should exclude amortisation of the unrealised appreciation in the value of any fixed assets of the Company. In the case of TUMPECO, write-offs of asset value appreciations (not caused by cash outlays) should be charged against capital reserve accounts.

18.2.8. Planned Capacity Absorption Rule should be adopted as basis for charging fixed overhead to production.

18.3. **BUDGETING SYSTEM**

- 18.3.1. A Budget Committee, made up of all Heads of Department should be set up to co-ordinate all budgeting activities. The Committee should be chaired by the General Manager.
- 18.3.2. Monthly, quarterly and annual budgets should be prepared and submitted according to well defined deadline dates.
- 18.3.3. Responsibility Accounting Concept should be enforced in budgetary control reporting.

18.4. REPORTING SYSTEM

18.4.1. The PIES new Monthly Production Cost Account Format and Monthly Profit and Loss Account Format should be used.

18.5. FINANCIAL PLANNING SYSTEM

18.5.1. Weekly, monthly, quarterly and annual cash budgets should be prepared and submitted according to deadline dates.

18.6. <u>CONTROLLING SYSTEM</u>

18.6.1. Variance analysis should be extended to include variances of material cost, labour cost, overhead costs and sales values.

18.7. **LIQUIDITY CONTROL SYSTEM**

- 18.7.1. Trend analysis should be done in respect of current and acid-test ratios.
- 13.7.2. Statements of sources and application of working capital should be prepared monthly.
- 18.7.3. Monthly Debtors Ageing Analysis should be prepared modified to show outstanding debts beyond 30 days. A portion of the analysis should indicate references to actions taken to recover debts beyond 30 days.

18.8. SYSTEMS IMPLEMENTATION

- 18.8.1. A Committee of the Board of Directors should be formed to oversee the implementation of all the recommended systems. In the absence of a Board, a Management Committee should be formed, or PIES assistance should be sought.
- 18.8.2. In order to fully cover all the developed systems on the computer, the Financial Accountant and the Cost Accountant should be given training in computer applications, especially, in database management and spreadsheet, prior to acquisition of personal computers for the Company.

CHAPTER 19.0.

REVIEW OF FINANCIAL AND ACCOUNTING OPERATION

REVIEW OF FINANCIAL AND ACCOUNTING OPERATION

19.1. REVIEW METHODOLOGY

- 19.1.1. The methodology employed by the Consultant consisted of:
 - (i) a series of interviews with the Chief Accountant and his subordinates and also the Chief Engineer and his subordinates;
 - (ii) a study of the data flow through the operations of the Company.
- 19.1.2. Analysis of the existing systems of operation identified several areas where improvements might be made. These areas include the following:-
 - the means of controlling material issues from raw material store through the production.
 - the method of costing for the finished products per various profit centres.
 - the means of costing for the cost of labour actually consumed in production.
 - the means of absorption of the fixed overhead to production.
 the method of planning the working capital needs of the
 - company, and the method followed in effectively managing the Company's working capital.
- 19.1.3. The Chief Accountant and his subordinates were largely engaged with the Finance and Accounting Consultant throughout the above phases discussing all the identified areas of possible cost reduction and examining the practicabilities of all recommendations made for the improvements of the identified problem areas.

19.2. THE COST ACCOUNTING SYSTEM

The present system of costing for finished goods stock, work-in-progress stock and raw material and consumables stock leaves much to be desired.

19.2.1. Costing for Finished Goods

A standard cost structure is adopted for almost all the known products of the Company. This is based on a total costing approach which does not lend itself to any meaningful cost-volume-profit analysis of the Company's marketable product lines. The cost structure is as follows:-

	<u>Unit</u>	Usage	Rate	<u>Yalue</u>
Direct Materials		×	×	××
Labour		×	×	xx
Prime Cost				
Add: Factory Overhead				xxxx
(20% of Prime Cost)				×
Total Factory Cost of Product	ion			
				XXXX

This structure has for a very long time fashioned the cost of completed units in the factory to which a 30% mark-up is added under a cost-plus pricing method being followed. Appendix 1: "Costing Sheet for Hospital Equipment" provides details of a typical cost build-up of a product line.

In the above cost structure, reference to direct materials includes raw materials and factory consumables.

19.2.2. Methodology for Finished Goods Costing

In the method agy of the present finished goods costing, standard direct material inputs and labour usage for each product unit have been pre-costed.

The pre-costing is done annually and is based on the engineering specifications for the production of each specified product line and the market prices of the inputs prevailing at the point in time the rates are being determined.

Thus, when goods are produced, the good units are costed by multiplying the number produced by the pre-determined unit rates according to specific direct material usage and labour usage. The resulting prime cost (direct material and labour costs) does not include all the other variable factory cost of production such as oils, water and power consumed.

No system exists for determining the costs involved in consuming the other variable costs, neither is there a system for determining relevant factory fixed costs.

Consequently, an arbitrary rate of 20% is traditionally applied on the prime cost, representing both the variable and fixed overheads. The sum total of the prime cost and the 20% overheads gives the factory cost of production. This invariably leads to excessive over-valuation of the cost of finished goods.

In conclusion, there was a pressing need to develop and install an effective system of costing which would

ensure, inter alia, that the cost of finished goods should not only be realistic but more importantly be competitive. This, in its installation necessitated the use of a cost ledger which was hitherto not in operation.

19.2.3. Costing for Factory Work-in-Progress

Like the finished goods, the costing for the work-inprogress is based on predetermined rates. This is done by ascertaining the percentage level of completion of each product-in-progress and multiplying the estimated inputs to date by the predetermined rates. Thus, the actual costs of raw material and consumables usage are completely ignored.

The effect of this lapse was that an awful chunk of working capital was tied up in the work-in-progress without being properly accounted for.

As a result of the lack of a proper system of recording movements in-and-out for actual raw material usage, the true value of work-in-progress had always been misstated.

In conclusion, it became imperative to devise a way of tracking actual consumption of raw material and consumables in work-in-progress in order to avoid the misstatements of the binding effect of actual working capital which had hitherto been overlooked.

المراجع والمراجع

19.2.4. Costing for Raw Material and Consumables

The method of calculating the landed cost of either imported raw materials or local materials prior to being taken on charge is appropriate. The only identified defect was that the actual issue of the materials to production did not take cognisance of the replacement price of inputs.

In an inflationary environment, the effect of not including the latest obtainable price in material issues into production will be to declare gross profits which would scarcely represent the real gross earnings for an operating period.

In conclusion, there was the need to develop a method of pricing material issues that would reflect the latest prices of inputs in the cost of sales of all product lines.

19.3. FINANCIAL ACCOUNTING SYSTEM

19.3.1. Accounting for Operations

The system for capturing financial data in respect of daily sales and relevant expenses for further processing into monthly management accounts is sound.

The accounting system being followed is in accordance with the requirements of the PIES manual of Accounts.

What the system lacked was an acceptable basis for determining the working capital needs of the Company as a going concern.

Consequently, successive managements did not have the opportunity of using a system to effectively plan and monitor the Company's working capital. This led to the ever weaking liquidity position, inspite of successive loans obtained from various banks in the recent past to finance raw material purchases and rehabilitation of machinery.

ANALYSIS OF WORKING CAPITAL 19.4.

In order to fully appreciate the impact of inefficient planning and control of TUMPECO's working capital since 1985 on its liquidity and asset utilization, following analysis was made.

The notable features of the working capital fund for the past seven years have been as follows:-

In respect of Current/Circulating Assets

- Cash and Bank Balances
- debtors and Prepayments
- Stocks and Work-in-Progress

In respect of Current Liabilities

- Balance due to U.D.C. (resulting from accrued management fees) Creditors and Accrued Charges
- Corporation Tax Payable, and
- Interest on Bank Loans.

The liquidity and financial health of a Company, at any point in time, is measured by the difference between the total amount of available circulating assets and the total current liabilities.

The maintenance of a stable level of this difference in relation to sales, production and total assets is of utmost importance.

Yet, during the past seven years, (1985 to 1991), this level of stability had not been achieved, as shown by Table 19(a) below:

TABLE 19(a)

TUMPECO RELATIVE STABILITY OF WORKING CAPITAL TO SALES, PRODUCTION AND FIXED ASSETS (1985-1991)

Ratio	1985	1986	<u>1987</u>	1988	1289	1990	1991
Working Capital (WC)							223.2
Sales	1.26	0.05	0.11	0.35	0.15	0.18	0.22*
WC/Value of Production	2.69	0	0.16	0.65			
WC/Fixed Assets	0.48	0.06	0.26	1.70	0.17	0.30	0.03*

SOURCE: IMAS Computations. May, 1992. * Working Capital has been adjusted by maturing EADB Loan.

The dramatic fluctuations shown in the above trends simply means that the importance of planning working capital levels in keeping with sales and production activities had not been accorded its rightful place in the overall management of the factory since 1985.

If working capital needs are not planned in consonance with the level of planned sales activity, it will result in inadequacy of working capital to meet production requirements. The failure to meet production requirements in turn leads to inability to satisfy market demand.

Little or no sales obviously leads to low asset utilization. The effect of low or under utilization of available and otherwise resourceful assets inevitably leads to perpetual working capital problems.

In such a situation, breaking even operationally as an enterprise will be difficult. The recent financial history of TUMPECO has been typical of this condition.

In the analysis of the Company's asset utilization as per Table 19(b) below, a fluctuating trend is highlighted on all the variables throughout the seven-year period considered.

TABLE 19(b)

TUMPECO
ASSET UTILIZATION RATIOS (1985 - 1991)

	Ratios	<u>1985</u>	<u>1986</u>	1987	<u> 1988</u>	<u> 1989</u>	<u>1990</u>	<u> 1991</u>
1.	Sales to Cash and Bank Balance	-2702	9.1	-75.5	-66.3	39.8	-17.8	57.9
2. 3.	Sales to Debtors and Prepayments Sales to Stocks &	2.9	5.0	3.0	3.6	5.8	4.0	2.2
4.	Work-in-Progress Sales to Fixed	0.9	2.5	1.7	1.3	1.5	1.7	1.2
5.	Assets Sales to Total	0.4	1.0	2.4	4.9	1.1	1.7	0.2
6.	Assets Sales to Total	0.3	1.0	1.9	1.8	0.9	1.3	0.1
	Current Liabilities	4.0	1.5	1.2	1.5	1.4	1.7	1.7

SOURCE: IMAS Computation. May, 1992.

19.5. ANALYSIS OF SHORT-TERM LIQUIDITY

Table 19(c) below presents some important liquidity measures of The Uganda Metal Products and Enamelling Company Limited over the past seven years. The current ratio has been persistently low and the acid test ratio reveals a hopelessly risky financial cover for the Company's maturing bills.

TABLE 19(c)

TUMPECO SHORT-TERM LIQUIDITY ANALYSIS

Ratio	<u>1985</u>	1986	1987	1988	1989	1990	1991
Current Acid Test Cash to Current	6.0 0	1.1	1.1	1.5	1.2	1.3	2.2
Liabilities * Increase in	0	0.2	0	0	0	0	0
Sales * Increase in			125.5	97.3	69.8	51.2	56.0
Current Liabilities	1		174.5	62.8	72.6	36.1	53.2

SOURCE: IMAS Computations. May, 1992.

The discouraging trend in these measures must be interpreted in the light of management's lack of clear policy and intent. It is quite conceivable that the current positions in 1985 and in 1991 respectively were unnecessarily strong and represented a wasteful typing up of resources that did not earn any appreciable return for the Company.

The proportion of cash and bank balances among the current assets has registered no impacts. What is worse, the absolute amounts of cash and bank balances

have continued to swing between overdrawn positions in every other year. There has been significant increases in current liabilities but actual cash and bank positions have shown declining and fluctuating trends, the interpretation being that there had not been any tolerable cover for the Company's maturing bills under crises conditions.

The average increase in current liabilities was out of proportion to the increase in sales during the period under review.

That means that TUMPECO was somehow able to secure shortterm credit from suppliers and banks at a rate almost twice as fast as that warranted by growth in sales.

Included in the closing inventories of finished goods, raw materials and work-in-progress, underlying the current ratios, are excessive balances. A number of factors could account for this:-

- (i) Lack of proper marketing plans and effort to convert finished goods inventory to cash.
- (ii) The absence of a practical sales policy on credit sales and collections, trade and cash discounts, as well as incentive sales commissions to staff.
- (iii) In respect of excessive raw material and work-inprogress holdings, the cause has been poor planning of
 production requirements coupled with indiscriminate
 purchasing, i.e. wrong components were either bought at
 the time they were urgently needed and therefore could
 not be used as right components bought without ensuring
 that other complimentary components to make finished
 products are also available in stock.

19.6. EVALUATION OF THE COMPANY'S WORKING CAPITAL PROBLEM

The identified cause of TUMPECO's working capital problem is more of mismanagement than the lack of it.

Analysis of the working capital balances at the end of each year from 1985 to 1991 and even up to 31st May, 1992 indicates that there has always been excess of current assets over current liabilities. Reference Appendix 2: Summarised Balance Sheets (1985-1991).

But these net current assets have never been rendered in a form liquid enough to support the smooth running of the Company over these years. The components of the net current assets have been largely assets which did not have ready convertibility into cash, eg. obsolete and slow moving raw materials as well as slow moving and obsolete finished goods.

The analysis of inventories of raw materials and finished goods as at 30th April, 1992 revealed that out of a total of USh. 170 million as much as 84.6% was raw material.

Included in this percentage were considerable amount of obsolete stock items. Table 19(d) on the next page provides an indication of the nature of stock items involved, confirmed by the latest stock take of 31st May, 1992 by the Company's Chief Engineer.

These are, infact, items which cannot be used by the Company any more, which in the opinion of the Consultants should be sold out immediately to recoup part of the locked up working capital in order to finance profitable product lines.

TABLE 19(d)

TUMPECO OBSOLETE STOCK AS AT 31ST MAY, 1992

	STOCK ITEM	QUANTITY	YEAR OF PURCHASE
1. 2.	Rejected Wires 13½" Guage Galvanised Galvanised 8" Guage	79 Rolls 11 Rolls	1985 1982
	Chemicals UREA Sodium Aluminate EPSONSALT Sodium Nitrate Potannium Chloride	675 Kgs 200 Kgs 532 Kgs 180 Kgs 600 Kgs	1982 1982 1979 1980 1980

SOURCE: TUMPECO Records. May, 1992

Short term bank loans have in the past been taken by the Company to support operations when positive balances of net current assets could not be turned into needed cash.

The effect of capital finding in inventories has been enormous. By December 31, 1991, total working capital locked up in stocks of raw materials, finished goods and work-in-progress amounted to USh. 226.3 million. At the same time, the Company owed the Banks a total of USh. 234.4 million (including interest charge accrued of USh. 64.3 million).

The excessive binding of the working capital in stocks was brought about by either lack of know-how in the judicious allocation of scarce short-term loans or sheer lack of discipline on the part of Management.

Whenever Management had to allocate short-term loans to acquire raw materials in the past, no proper financial analysis was made to support any criteria adopted for the allocation decision.

Consequently, almost invariably scarce borrowed funds were held tied in raw materials, work-in-progress and finished goods of product lines, in proportions, which did not yield any significant contributions margins towards meeting the fixed interest charges.

In the analysis in Table 19(d) of the Cost-Volume-Profit relationship of product-lines, signs offered the least contribution margin per unit after mattress and carpentry, that is USh. 2000 per unit as compared to USh. 24,000 and USh. 31,000 per unit respectively for tool room and vono product lines. Yet when the EADB loan of \$143,000 was obtained in the last quarter of 1990, supposedly for purchasing critical raw materials, as much as 65% of the loan amount was allocated to the signs alone.

No item of raw materials for the Enamelling Product Line was purchased, even though the circumstances of the Enamelling Department at that material time warranted the purchase of badly needed raw materials to supplement existing ones.

It is pertinent to mention here that as a result of the neglect to purchase the then critical raw materials for continuing enamelling production, quite a significant quantity of the old raw material stocks have been deteriorated and cannot be of any commercial use.

The Consultant's review of the loan allocation decision revealed among other things, that:

- (a) product line turnover was the primary criterion as against product unit contribution margin. At the time of the decision, the signs product line had the highest turnover among all the product lines. Secondly, management wanted to maintain a prestigious monopoly of being the supplier of motor vehicle number plates to the Government, inspite of the low contribution margin per unit offered.
- (b) Sources of supplies were chosen without due cognisance of delivery times, economic order quantities and raw material quality. For example:
 - (i) "Materials for making number plates which formed 65% of the loan did not only arrive late but also in bits".
 - (ii) "Materials for making beds also arrived late and in bits. By the time the entire consignment arrived, the season for the sale of beds to schools was over".
 - (iii) Large quantities of mild steel cold angle irons guage 1/8" were imported instead of the well known quality hot angles iron 1/8". Consequently production losses increased because the cold irons were sub-standard materials for making beds. The angle irons on the beds were weak and could bend. Naturally, customers who bought them were disappointed and other purchasers who took early notice of the poor quality broadcasted their perception of the poor image of TUMPECO.

ANALYSIS OF RAW MATERIAL INVENTORY AS AT 31ST DECEMBER, 1991

	USH.	PERCENTAGE
Enamelling Department Signs and Chevrons Department Vono Department Tool Room Department Mattress Department	13,728,856 73,728,299 24,633,415 13,770,384 6,662,817	10.4 55.6 18.6 10.4 5.0
	132,523,771	100.0

SOURCE: TUMPECO Records. May, 1992

In the case of signs, it represents 62.5% of USh. 79.6 million in finished goods, 44.2% of USh. 14.1 million in Work-in-progress and 55.6% of USh. 132.5 million locked up in raw material inventory.

In the view of the Consultants:

- the use of short-term loans to finance working capital needs is not recommended. Bank overdraft facility should be used instead, but should be within approval limits.
- working capital needs should always be planned in step with the level of capacity utilization.
- the elements of current assets at any point in time should be guided by policy and be controlled, inter alia, as follows:-
 - (i) the monthly level of raw material inventory considered adequate to support continuous production should be clearly defined by the Production Manager.

- (ii) the monthly level of unavoidable work-in-progress should always be determined in relation to the monthly level of production, As far as possible, however, working capital should not be locked up in work-in-progress inventory.
- (iii) The monthly level of finished goods inventory considered adequate to support the marketing programme and continuous sales should also be clearly defined by the Marketing Manager.
- (iv) As a sales policy, the percentage of monthly credit sales as against cash sales should be defined. For purposes of credit sales, there should be specific policy on credit period allowed.
- (v) As far as possible, prepayments should be avoided and where unavoidable, the amount should be planned in keeping with the level of production requirements phased in accordance with economic order quantities.
- (vi) Wherever feasible, suppliers' credit facility should always be negotiated as against bank overdraft facility and should be planned in consonance with the level of sales activity.
- (vii) It should always be ensured that the elements of the current assets component of the working capital be easily converted into cash in the event of any eventuality. Thus, the use of acid-test ratios should become a constant feature in measuring the extent of cover the Company's cash and near-cash elements have over the current liabilities at any point in time.
- (viii) Allocation of scarce cash resources for raw material purchases should be made in the light of the extent of contribution margin per unit each product line can provide, given that there is demand for the product and marketing effort is effective.

19.6.1. Capital Binding in Accounts Receivable

Unlike the inventories, the capital binding in debtors has had high prospects of convertibility in the past.

Table 19(h) below provides the ageing analysis of debtors as at 31st May, 1992. Out of the total of USh. 31.8 million, as much as 87.7% was due from the Government departments.

TABLE 19(h)

TUMPECO DEBTORS AGEING ANALYSIS AS AT 31ST MAY, 1992

AGE OF DEBT	AMOUNT OF DEBT USH.	PERCENTAGE
Over 180 Days	9,450,958	29.7
Over 90 Days	845,100	2.7
Over 60 Days	8,756,200	27.5
Under 60 Days	12,763,700	40.1

	31,815,958	100.0

SOURCE: TUMPECO Records. May, 1992

Out of the debtors over 180 days, as much as 71% was expected from the government departments and of the total debtors over 60 days, 99.1% was expected from the government departments.

Delays in collections normally characterised TUMPECO's transactions with the government departments due partly to treasury allocation delays and largely to lack of appropriate credit and collection policy.

19.7. ANALYSIS OF OPERATING PERFORMANCE AND RETURN ON INVESTMENT

Table 19(i) presents Percentage Abridged Profit and Loss Accounts (1986 - 1991), followed by TUMPECO's return on investment ratios during the same period in Table 19(j).

TABLE 19(1)

through Asset Valuations	233.3	42	107	527	1.3	1736

SOURCE: IMAS Computations. May, 1992,

The gross profit has fluctuated significantly, within relatively a range of 29.2% in 1987 to 12.7% in 1991.

The returns that the Company realised on total assets have been discouraging due to excesses in administrative expenses and high interest charges on loans. The best year was in 1988 at 23%. The negative return in 1986 was significant followed in 1989 with another negative return of 14.6%.

In comparison with the return on total assets, the rather constant zero return on equity capital may be traced to two factors:-

The lack of maintenance of the acceptable dividend policy.
 The relatively disadvantageous use of short-term and long-term loans.

It is important to note, however, that the Company cannot expand its debt much more from the present level since over the past six years debt has expanded very significantly. Thus, in the immediate future, an adequate return on equity will be dependent primarily on improvements in profitability in asset utilization.

TUMPECO is at the moment in dire need of fresh injection of equity capital. Needless to say, the future directors of the Company can no longer afford to take the issue of dividend policy for granted, if in the near future, the shareholders would be invited to contribute to equity capital, as in fact, they should, under the Memorandum and Articles of Association of the Company.

19.8. ANALYSIS OF CAPITAL STRUCTURE

The first part of this analysis discusses the risk of overbearing debt finance against the prospect of long-term solvency. In the latter part of the analysis a recommendation is made for fresh capital injection by the shareholders.

The Company's long term finance, since 1986 has been supported by equity capital of USh. 45,000 only. venture capital was not by any measure adequate to meaningful any expansion in operational Therefore, between the period 1986 - 1991, programmes. the Company resorted to short-term borrowings, ranging from USh. 10.2 million in 1986, through USh. 21.8 million in 1988 right up to USh. 160.1 million in 1991. effect of this excessive term loans is a crippling interest charge unserved as at the end of 1986 to 1991, ranging from USh. 2.2 million in 1986 to USh. 64.3 million in 1991.

As at May 1992, the Company's outstanding debt position stood at approximately USh. 200 million including accrued interest charges of about USh. 64.3 million.

Meanwhile, during the period 1986 and 1991, the Company's fixed assets which have been largely financed by loan able capital, continued to appreciate in value. Consequently, the capital reserve of the Company has grown from USh. 14.0 million in 1986 through USh. 94.9 million in 1989 to USh. 1.7 billion in 1991. The present revalued asset base of the Company is USh.1.9 billion.

ことが、 はかはあり

The latest loan capital structure (392) stood as follows:-

	USH. MILLION
Uganda Pevelopment Bank Uganda Commercial Bank East African Development Bank	10.7 26.4 98.0
Outstanding Loan Interest	135.1
orestanding Loan Interest	64.3
	USh. 199.4

Apart from the Uganda Development Bank Loan, the rest have become practically current liabilities and must be settled without fail.

It is pertinent to mention here that these maturing loan creditors have a lien on the Company's fixed assets, that is, a pari-passe sharing of the mortgage of the Company's fixed assets.

It goes without saying that beyond a reasonable period of grace and without being assured by the directors of any positive moves to liquidate the debts, the Banks will recover the debts by any available legal means.

At the moment, the Company has no Board of Directors to decide on this pressing issue.

The Consultants are aware that, following a recent government directive, the equity interests in TUMPECO have been transferred from UDC to the Ministry of Finance and Economic Planning.

- 人がいいからいを変し

In the opinion of the Consultants, the present asset base of the Company warrants a fresh injection of capital from the Company's stakeholders. The equity contribution required should be equivalent to the amount payable on calls to be made on shares in issue of which the authorised share prices have been substantially diluted, as a result of economic factors in the past.

19.8.1. The Case for Required Injection of Equity Capital

The Company currently has 225,000 ordinary shares in issue. The recorded amount paid on these issued shares at USh. 0.20/- is USh. 45,000.00.

However, by an ordinary resolution of the Company passed on April 2, 1965 (reference Appendix 4), the authorised share capital was 225,000 that is, at a par value of £1/share or USh. 2000/share (at current rate of exchange). This means that, to date, only 0.01% of the equity capital has been provided by the stakeholders.

In order to salvage the Company from its present precarious situation, the remaining 99% of the authorised share capital should be paid up. This will amount to:-

225000 shares 0 tot		<u>ush.</u>
225000 Shares @ USh. 2000/-	=	450,000,000
Less 225,000 Shares @ USh. 0.20/- already paid	=	45,000
Total amount of required Capital Injection		
or required capital injection	=	449,995,000

Under paragraph 5 of the Memorandum of Association of The Uganda Metal Products and Enamelling Company Limited, the liability of the members is limited.

By interpretation under the Companies Act of Uganda, the liability of the members is limited to the extent of unpaid amounts on the Company's issued shares.

It is expected that, out of the proceeds of this capital injection, the Company would be able to repay all its outstanding loans and interest of approximately 200 million and have a balance of about 250 million to finance its working capital needs estimated to be about same at the beginning of the plan period.

19.8.2. Alternative Source of Finance

Pending the receipt of the fresh capital injection from the Company's shareholders, it is recommended that the Company negotiates for a bank overdraft, under 100% guarantee by the shareholders.

19.9. BREAK-EVEN ANALYSIS

The culmination of poor working capital management is largely responsible for the factory's present low capacity utilization of 14% of installed capacity.

Consequently, even though all the product lines have bright prospects of yielding positive contribution per product unit towards total fixed costs and enterprise profit, the low level of production and sales activities makes a greater number of them loss leaders.

In 1991, the Company sustained overall corporate operating loss of USh. 20.5 million. The analysis of the production and sales reports show that activities in the first three quarters of 1991 were relatively much lower as compared to the activity in the last quarter of the year.

The loss of 1991 was sustained because practically, there was no way, at 12% level of activity, the Company could breakeven, let alone make a marginal profit.

It is however reassuring to note that since January 1992, the modest increase in capacity to 14% has made it possible for the Company to repay its outstanding loans to the tune of USh. 35 million between January and April, 1992.

Table 19(k) depicts an analysis of the cost-volume-profit relationships of the Company's product lines at 14% of capacity utilization between January and April, 1992.

In this analysis, five (5) out of the six (6) profit centres were considered. The sixth one, Enamelware was not operational at the time.

TABLE 19(k)

TUMPECO COST-VOLUME PROFIT-RELATIONSHIP (JANUARY - APRIL, 1992)

NET PROFIT/(LOSS)	214	(7205)	3312	(89,82)	(6976)	(19634)

SOURCE: TUMPECO Records. May, 1992.

Guage or equivalent units employed for this analysis were as follows:

Profit Centre

Guage/(Equivalent) Units

Carpentry Vono Tool Room Sign Mattress

Wooden Beds 3' x 6' Double Deckers Double Deckers

Motor Vehicle Number Plates Spring Mattress of 3' x

In this analysis, Fixed Overhead has been apportioned as follows:-

Tool Room - 30% Signs - 25% Vono - 20% Mattress - 15% Carpentry - 10%

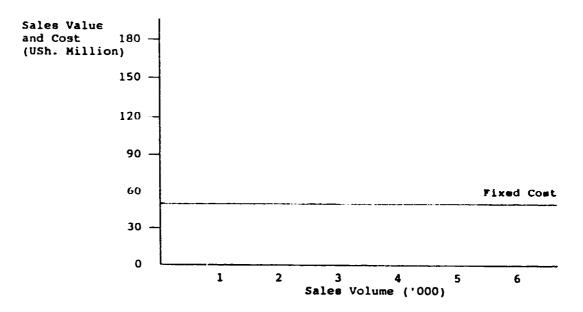

As can be seen from the Table 19 (k) and the break-even graph on the next page, the Company did not breakeven at 14% activity level. Two main product lines, mattress and carpentry are loss leaders. This is because they are the product lines with the least sales activities. Most of these product lines completed units are used as components for tool room and vono production but their transfer costs have not been absorbed by them in the past. The major cause of the loss in the first four months of 1992 can be traced to lack of optimum sales mix.

For profit centre analysis purposes, in the future, it would be advisable to merge the operations of mattress with vono and carpentry with tool room, as vono/ mattress department and tool room/carpentry department respectively. In this connection, the physical locations of mattress and carpentry should continue to remain as they are.

Consequently, Management should concern itself with four profit centres, mainly,

- Enamelling, as soon as it becomes reactivated
- Tool room/Carpentry
- Signs and
- Vono/Mattress.

BREAK-EVEN GRAPH

As can be seen from this graph, more product quantities should be sold between May and December 1992 before the Company would break-even. The decision as to what product quantities should be sold need be an optimum sales-mix decision based on contribution margin per product line criterion. CHAPTER 20.0.

PRODUCT COSTING

PRODUCT COSTING

20.1. CHARACTERISTICS OF THE PRESENT PRODUCTION ON SYSTEM

Production either for stock or specific jobs is basically on batches with the following characteristics:-

- (i) Small or large quantities (batches) of products.
- (ii) Systematic, standardised approach to one batch before moving on to the next batch.
- (iii) Short production runs, except enamelling plant.
- (iv) Skilled production run scheduling.
- (v) Skilful planning of batch size.
- (vi) Specific purpose machinery.

Six production departments were identified as follows:-

- Tool room
- Vono
- Carpentry
- Signs
- Mattress
- Enamelling

20.2. Batch Costing

The basis for product costing should be by batches. This will enable each batch production to be fully costed so that cost of each unit of a produced batch can be easily determined.

Batch production will only be successful where production is planned, all inputs made available and production orders made in good time.

The following shifts of traditional goals should be emphasized.

	FROM Production Goals	TO <u>Marketing Goals</u>
i.	Efficiency of Production	Customer Satisfaction
ii.	Standard Products	Customised Products
iii.	Long Production Runs	One Off Orders
	Cost Effective Delivery	Quick Delivery Orders
v.	Minimum Stocks	Just-in-time Stock Availa- bility (based on Materials Requirement Planning
vi.	Prices based on Costs	Manufacture within Selling Price Constraint.

20.3. COST CENTRE IDENTIFICATION

In order to be able to ascertain the cost build-up at each successive level of batch production, a survey of the normal production processes at all the six plants were conducted by the Consultant in the company of the Company's Chief Engineer, the Cost Accountant and the Financial Accountant.

The objective of the survey was, inter alia, to assess the facility and suitability of identified production processes for purposes of cost accumulation and transfers by process as well as by departments.

The study also confirmed the adaptability of job costing method for all the departments except the Enamelling Department which was considered suitable for process costing method.

The principles involved in the systematic development of cost centres have been explained and illustrated to the Company's Cost and Financial Accountants.

The Chief Engineer's assistance to the Consultant, the Cost Accountant and the Financial Accountant is explaining the production processes, was significant.

The main steps followed in the determination of the cost centres included the following:

- Initially identifying relevant profit centres, viz Tool Room, Hattress, Vono, Signs, Carpentry and Enamelling.
- Specifying the product lines of the profit centres.
- Flowcharting the processes involved in the manufacturing of the specified product lines.
- Defining the appropriate product costs to be measured for the manufactured product lines.
- Highlighting the main features of the product cost and stating the objectives of the cost.
- Physically observing production runs at each section of the production department with a view to identifying actual departmental cost elements and the suitability of cost centre creation.

As part of the process of evolving appropriate cost centres, waste/material utilization factors at the tool room was critically examined. With the assistance of the Chief Engineer, a solution was found for effectively utilizing the off-cuts of angle irons and other waste materials. Appendix 17 is an exhibit of the outcome of the exercise on waste material utilization.

Toolroom Department was used as the basis for illustrating the cost centre development. Using the developed cost centre as guide, the cost centre is expected to develop cost centres for the remaining production departments of the factory. The main Cost Centres of Toolroom are:-

- Cutting and Punching Welding
- Painting and
- Finishing (Wiring and Plastic Ferrous Fixing)

illustrates the recommended accounting Appendix 18 treatment for capturing the material, labour and production overhead costs elements in arriving at the cost of the finished product - double decker 2½' x 6'.

CHAPTER 21.0.

WORKING CAPITAL MANAGEMENT

21.0. WORKING CAPITAL MANAGEMENT

21.1. <u>UNDERSTANDING THE NATURE OF</u> THE COMPANY'S WORKING CAPITAL

The identified cause of TUMPECO's working capital problem is mismanagement. In order to arrest this cause, it is important to first and foremost, understand the nature of the Company's working capital. The figure below (21.1) exhibits the normal Working Capital Cycle, highlighting its main components.

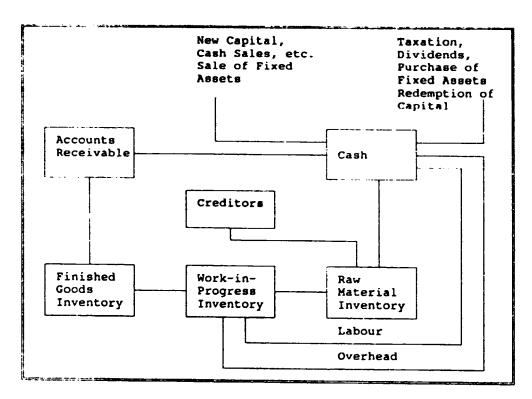

FIGURE 21.1 : Working Capital Cycle

The successful management of the circulating capital therefore depends on the success at the concurrent management of the investment in the above main components of the working capital, viz, inventory, accounts receivable, and cash.

21.2. **INVENTORY MANAGEMENT**

Inventories represent a financial investment, that is, the purchase price paid for the raw material, the cost of labour applied to goods in process prior to transfer to finished goods inventory and finally the cost of handling and storage.

Raw material inventory constitutes the largest percentage of TUMPECO's total inventory, by virtue of the nature of its business and the diversity of its product lines.

In the course of evaluating the identified problem associated with the Company's working capital, it was revealed in section 19.6 that the excessive binding of the working capital in raw material inventory for example, was partly caused by the lack of know-how in the judicious allocation of scarce short-term capital.

In view of the Consultants, there is the urgent need to control the raw material inventory with the objective of satisfying the customers scheduled delivery dates.

Effective control of the raw materials throughout the manufacturing cycle should be pursued in order to prevent the problem of having to give excuses to customers for late deliveries from reoccurring.

The maintenance of optimum inventory levels and inventory turnover for TUMPECO's operation at maximum profit will be achieved through the control of inventories to ensure that the right material, in the right quantity and of the right quality, is made available at the right plant at the right time.

In this connection, the planning of optimum inventory levels by inventory management should require close cooperation with the marketing function.

In order to avoid locking up needed capital in raw material inventory, market trends should be predicted accurately and inventory levels adjusted - increased when increased sales are anticipated and decreased when lower sales volume can be foreseen.

THE CASE FOR THE ADOPTION OF MATERIALS REQUIREMENT PLANNING (MRP) CONCEPT

The well known methodology of inventory management and control at TUMPECO has been based on the determination of Economic Manufacturing Quantities (EMQ).

The fundamental assumption underlying this system is that each item of raw material inventory is independent of all other items and can therefore be ordered independently.

At TUMPECO, this assumption has woefully failed to achieve any meaningful results in production. Consequently, this has led to rather uncoordinated material inputs purchases.

Some of the adverse consequences have been that, as much as 14 million Uganda Shillings had been locked up in work-in-process by the end of May, 1992 and as much as 132 million U. Shillings were locked up in raw materials as at 31st December, 1991, without any visible prospects of early convertibility to cash.

It goes without saying therefore, that, the adoption of a system that will permit the determination of future raw material demands co-ordinated in time according to when they shall be required on the production line need not be overemphasized.

The Consultants accordingly recommend the immediate adoption of the Materials Requirement Planning (MRP) System.

The co-ordinating role of MRP is shown in the Figure 21.2. on the next page.

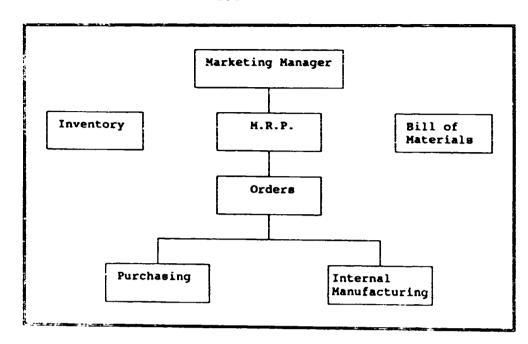

FIGURE 21.2 : The Co-ordinating Role of M.R.P.

Under this system, marketing management's inputs would be customer orders and orders to produce just-in-time quantities for stock in order to meet seasonal demand, eg. school beds.

Basic inventory information should be made available through regular inventory records in order to support the M.R.P System.

M.R.P would co-ordinate the inventory information with a bill of materials, which should be furnished by the Production Department.

The bill of material should not simply be a list of material required; it should be structured in such a way that it would indicate the manner in which a product is put together from the raw material state into the final stage.

A master schedule should be prepared for the above listed item which may be time-phased. The master schedule in turn can guarantee material and capacity requirements over a period of time, taking into account the interdependency of these requirements.

As shown in figure 21.2 above, MRP then issues order for materials either through the internal manufacturing facility.

The use of Personal Computers and proper computer programming should be pursued in order to facilitate the MRP system so that Managers can devote more time in managing production than tracing material movements.

In addition to the easy adaptability to computerization, the MRP System affords the following advantages:

- (i) Emphasis is placed not only on having the right quantity of an item but also having it at the right time as required in the production cycle.
- (ii) M.R.P is concerned not only with inventory levels but is also tied in closely with the function of production planning and control, which deals with the flow of materials through the actual production process.
- (iii) M.R.P offers the opportunity for closer co-ordination between inventory attendant savings in costs as well as improvements in meeting customer delivery dates.

21.4. PURCHASING AND CONTROL OF MATERIALS

TUMPECO, at the time of the IMAS study, had a Management Procurement Committee charged with the following responsibilities:-

(i) to identify raw materials sources

(ii) to compare prices and quality

(iii) to recommend the right quality and minimum price to the Purchasing Department.

Membership of the Committee, headed by the Internal Auditor, included the following:-

- Marketing Manager

- Financial Accountant

- Cost Accountant/Secretary

- Production Manager

- Superintendent Production Process, and

- Chief Engineer.

The recorded achievement of the committee since its inception, was the procurement of bars of angle iron at USh. 13,800 per piece instead of USh. 16,000 as was being acquired by the Purchasing Officer, prior to the setting up of the Committee.

In the interest of cost reduction, the use of such Committees in the Company is highly commendable and should be encouraged to cover all critical bottleneck departments of the Committee, eg. the Marketing Department.

However, in the opinion of the Consultants, the structure of the Committee should exclude the Internal Auditor, in the interest of internal control and accountability.

The following 10-step procedure is recommended with a view to enhancing the effectiveness of purchasing at TUMPECO:-

- (i) Receipt and analysis of the purchase requisition.
- (ii) Selection of potential sources of supply.
- (iii) Issuance of request for quotations.
- (iv) Receipt and analysis of quotations.
- (v) Selection of the right sources.
- (vi) Determination of the right price.
- (vii) Issuance of the purchase order.
- (viii) Follow up to ensure scheduled delivery
 - (ix) Analysis of receiving reports.
 - (x) Analysis and approval of supplier's invoice for payment.

21.5. **INVENTORY CONTROL**

In view of the identified problems of raw material control, a system of perpetual inventory is recommended for immediate use.

Such a system should be administered through the provision of the following basic information.

- (i) On Order

 This part of the record shall show the quantity of material ordered but not received. New orders shall be added in this column and receipt.
- (ii) Received
 All receipts shall be posted here; there shall be no balance quantity in this column.
- (iii) On Hand
 This balance figure shall represent the quantity of the item that should be in the stock room. Receipts shall be added to this column and issues subtracted.

- (v) Allocated
 In this column, there shall be entered the quantities to be reserved for later issue for specific orders.
 Reserving of materials still in the stock room will ensure their availability when they shall be on the manufacturing floor.
- (vi) Available This shall be the quantity of material on hand that is still available for assignment to future orders.

Appendix 12 exhibits a Perpetual Inventory Order. In order to achieve effective control of inventory items, perpetual comparison of the above levels of inventory should be made to the planned levels of inventory determinable through the Materials Requirement Planning System recommended in section 21.3.

In the event of any material variations being revealed it must be immediately investigated and a purchase requisitioned which information shall be recorded in the "On Order" column.

The merit of this system is that, properly operated, there shall never be any resultant over or under supply of inventory item, thereby ensuring a constant flow of production activity.

21.6. INVENTORY CONTROL RECORDS AND PROCEDURES

Basic data of inventory transactions should be posted into cost ledgers or cards with each entry made by hand.

In the cost ledgers, the individual inventory item accounts, cards or files should disclose both quantities and values in U. Shillings.

In order to enhance the efficiency and effectiveness of this procedure, the use of a Personal Computer is recommended.

Accordingly, staff training in computer appreciation, especially, on disk operating systems and specific application programmes, including inventory control, should be commenced.

21.7. METHOD OF PRICING MATERIAL ISSUES

Materials issues to production at TUMPECO were not valued, as there was no system that ensured the accounting for the use of all factors such as labour, factory overhead in addition to the material utilization.

Under an integrated system of accounting, full cost ledger accounts should co-exist and operate alongside financial accounts.

Accordingly, specific work-in-progress accounts should be operated for identifiable product line, irrespective of the costing method being adopted as suitable.

Material issues to production should be traced from Storekeeper's cards or bins. In addition, there should be a valuation of the issues prior to their being posted to the appropriate work-in-progress accounts in the cost ledger.

cost of the newest lot until that lot is used up. Then the price of the next newest lot shall be used and so on. If in the meantime, another lot should come in, the price of this even newer lot shall be used when issuing material until the quantity involved is issued.

As the price of new material will vary from lot to lot, a difference between the actual purchase price and the issuing price will arise. This difference should be critically investigated. The accounting treatment should by a charge to an inventory variation account initially and should be finally cleared out to the Profit and Loss Account at the end of each month.

21.8. MANAGEMENT OF ACCOUNTS RECEIVABLE

TUMPECO prepares monthly ageing analysis, yet the circumstances conditioning the credit sales and collection terms does not enable this report to be used by Management as it should.

51,170,773 28,542,032 (20,526,089 (8,161,209) 17,109,085 (17,419,406) 2,046,952 (3,147,687) (788,510) 8,865,566 8,365,566 6,946,537 (138,342) (8,988,675) (8,988,675) (6,946,537) 833,740 2,180,480 1,409,765 (10,345,357) (10,239,884) 105,475 158,557 **Čurrency**]

APPENDIX 3 CONTD.

- (iii) Trade discounts should be given to customers who are able to purchase in large quantities.
- (iv) Agency commission to creditworthy, guaranteed agents should be introduced as a matter of urgency.
- (v) Official period of normal credit offered should be specified.
- (vi) Credit worthiness of customers should be assessed.

21.9. MANAGEMENT OF TUMPECO'S CASH

The identified illiquidity of the Company's net current assets over the past seven years has been traced to lack of a formalised financial planning system in the Company.

In order to improve upon the financial planning and working capital management at TUMPECO, the Chief Accountant's preparation and submission of the following financial reports on schedule deadlines, is recommended for immediate implementation.

418

APPENDIX 4

THE COMPANIES ORDINANCE, 1958

COMPANY LIMITED BY SHARES

Ordinary Resolution
OF
THE UGANDA METAL PRODUCTS AND
ENAMELLING COMPANY LIMITED

At an Extraordinary General Meeting of the Uganda Metal Products and Enamelling Company Limited duly convened and held on the Second day of April, 1965, the sub-joind Resolution was duly passed as an Ordinary Resolution:-

"RESOLVED that the Authorised Share Capital of the Company be and is hereby increased from £175,000 to £225,000 (Pounds Two hundred and twenty-five thousand) divided into 225,000 Ordinary Shares of Shs.20/each by the creation of 50,000 new Ordinary Shares of Shs.20/- each ranking pari passu in all respects with the existing Crdinary Shares of the Company".

(Af) Annual Cash Budget and Cash Performance of Previous Year

4.00 p.m ct Monday of the Last Week of the Month price to First Nonth or

Budget Year

General Manager and Heads of Department

Appendices 13 to 16 exhibit the recommended formats of the weekly, monthly, quarterly and annual cash budgets.

In addition to the cash budgets, the Company's Chief Accountant should prepare a monthly series of the following two working capital ratios:

Current Ratio:

Current Assets

Current Liabilities

(The desired ratio should be 2:1)

Acid Test Ratio: (ii)

Cash + Near Cash Assets

Current Liabilities

(The desired ratio should be l::)

Consequently, the desired feature of responsibility accounting is not realised.

The effect of the foregoing approach to budgeting is that the budget documents thus produced do not lend themselves for use as effective tools to motivate functional heads in maximising company profits through conscious efforts at cost cutting departmentally.

In order to correct the identified defectives in the present system, the budgeting system should be commenced with a comprehensive integrated system of planning, involving all Departmental Heads.

Under this system, the Marketing Department's plans should drive the Production Department's plans. This should next occasion a materials requirement planning and raw materials inventory planning.

A cash flow plan should then follow, detailing the expected cash inflows from projected cash sales and collections from accounts receivables on one hand, and projected payments for raw material purchases, labour and other direct and indirect operating expenses.

A working capital requirements planning should be initiated to ensure that no scarce capital in excess of actual requirements are tied up in raw material, work-in-progress and finished goods inventories, let alone prepayments and accounts receivables.

RECOMMENDED FORMALIZED APPROACH TO BUDGETING

As a safeguard against repeating the informalized approach, the following budgetary machinery is recommended:

- (i) There should be a Budget Committee set up.
- (ii) Membership of the Committee should be all Heads of Department.
- (iii) The chairperson of the Committee should be the General Manager.
- (iv) The secretary co-ordinator of the committee should be the Chief Accountant.
- (v) It shall be the responsibility of the Committee to formulate broad guidelines for the preparation of each annual budget and also to meet and discuss all departmental plans with a view to integration.
- (vi) Deadline dates shall be set for the completion and submission of departmental plans for purposes of annual budgeting.
- (vii) Deadline dates shall be set for the Committee to discuss the budget.

The Chief Accountant should further do the following:
Distribute the designed budget questionnairs forms to all Heads of Department for completion.

Ensure that the forms are duly completed and returned by all Heads of Department; including the Accounts Department, on schedule.

Consolidate departmental budget proposals and arrange budget hearing meetings.

Submit draft budget to the General Manager and all Heads of Department.

Ensure that the budget hearing meeting takes place on schedule.

Prepare final draft of budget document.

Submit final draft budget document to the General Manager and all Heads of Departments.

Make necessary adjustment to budgetary items and figures.

Submit final budget to the General Manager, Heads of Department and members of the Board of Directors.

Appendix 11, Budgeted Profit and Loss Account is a recommended format for adoption. This format has been designed to highlight the responsibility accounting concept.

The Chief Accountant should refer to PIES Financial Manual for guidance in designing additional formats as necessary.

CHAPTER 24.0.

EVALUATION OF CURRENT SITUATION

MARKETING REPORT ON THE UGANDA METAL PRODUCTS AND ENAMELLING COMPANY LIMITED

EVALUATION OF CURRENT SITUATION

24.1. MARKETS AND MARKETING

- 24.1.1. With the exception of enamelled hollowware products, all the other products are produced for the domestic markets only.
- 24.1.2. Enamelled hollowware products were once exported to Egypt.

 There are prospects of exporting them to Sudan and some

 PTA countries.
- 24.1.3. The domestic markets cover some government ministries, the boarding institutions, non-governmental organizations (NGO's) as well as private individuals.
- 24.1.4. TUMPECO has a complete monopoly in Uganda in the market for vehicle number plates. However, the Company faces increasing competition from Steelex Limited and Clinic Equipment in both domestic and hospital equipments, Delta representing Pelican of Kenya in road signs; Shiptooth brush in plastic wares; steel and wooden cottage industries in various products.

- 24.1.5. The markets for all the Company's products exist and appear to be increasing except for inner spring mattress and carpentry.
- 24.1.6. At the time of IMAS review, little or no marketing was being done. Sales were only made direct from the factory "Go-Down" to customers who called in from different parts of the country. The "Go-Down" is the store for all the finished products of TUMPECO and any other goods stocked by TUMPECO and sold direct to customers.
- 24.1.7. While sales statistics were not readily available on competitors, TUMPECO's sales figures over the years have not been encouraging. Sales at the time of IMAS survey, for example, was less than 50% of budget.
- 24.1.8. No comprehensive marketing programme was being followed under which market research, sales planning, advertising and promotion were properly coordinated.
- 24.1.9. It was observed by Consultants that the Marketing Department, as then organised and staffed, would not be capable of introducing the comprehensive marketing

programme envisaged and embark on aggressive marketing strategies that would be necessary to enable the Company increase its sales.

- 24.1.10. The Consultants recommend the strengthening of the present Marketing Department of TUMPECO by appointing a suitably qualified and experienced Marketing Manager, creating a position for a Marketing Services Officer who would be responsible for market research, sales planning, advertising and promotion and creating a position for a Sales Officer who would be responsible for sales.
- 24.1.11. The Consultants also recommend the appointment of sales agents throughout the country and the introduction of sales-related incentives to be given to both agents and employees of TUMPECO who would solicit more sales.

CHAPTER 25.0.

SUMMARY OF RECOMMENDATIONS

25.0. SUMMARY OF RECOMMENDATIONS

- 25.1. Commission Sales Agents throughout the country should be appointed. Sales related incentives should be given to both agents and employees of TUMPECO who would solicit more sales.
- 25.1.1. The Marketing Manager should be involved in deciding what products should be produced and what quantities.
- 25.1.2. In deciding what products to manufacture, preference should be given to products with high contribution margin or products with a high turnover rate.
- 25.1.3. Prior to determining the appropriate sales mix, the Carpentry and Mattress product lines should be absorbed by the Toolroom and Vono product lines respectively.
- 25.1.4. TUMPECO should offer products combinations that provide one stop shopping facility especially for the customer in specialised areas like the hospitals or schools.
- 25.1.5. The Company should periodically advertise its product prices, stressing especially on its known price advantages to its customer.
- 25.1.6. Under no circumstance should the pricing of the product be determined without the involvement of the Marketing Manager or his representatives.
- 25.1.7. The practice of adding a traditional charge of 20% of prime cost of product as factory overhead and 30% as profit margin should cease.

- 25.1.7. All prices, ie. factory, wholesale, and retail should be made available to customers.
- 25.1.8. TUMPECO should open a showroom at the Kampala city centre for the purpose of putting on display all of the Company's products.
- 25.1.9. The Company should embark on extensive sales promotion and advertising campaign for all its existing and prospective products.
- 25.1.10. The advertising budget should be $7\frac{1}{2}$ of 1993 sales budget and $6\frac{1}{2}$ and $5\frac{1}{2}$ on the 1994 and 1995 sales budgets respectively.

CHAPTER 26.0

DETAILED ANALYSIS AND FINDINGS

- 26.2.3. Such decisions are not guided by any laid down plans. They are simply based on materials availability, the preferences of the Production Manager and the capabilities of the Engineering Department. As a result, the market needs are left out of consideration.
- 26.2.4. The consequences of the absence of targets planning and therefore no coordination are varied and disastrous.
- 26.2.5. Apart from the product mix imbalance that can be and has been created, the practice as a whole has the finished goods store filled with goods that the market is not ready for, thereby tiring up the Company's scarce working capital resources.
- 26.2.6. As a result of the non-involvement of the Marketing Manager, and the lack of coordination in the stock in trade planning, the incumbent Marketing Manager does not show the required commitment in ensuring that the goods are sold on time to generate cash needed for working capital support.
- 26.2.7. The Consultants recommend that decisions concerning what products are to be produced and in what quantities and quality are to be made in consultation with the Marketing Manager.
- 26.2.8. The decision should be arrived at after a market research has identified customers' needs and preferences, and the size of the markets in which they are needed. Even though inputs from other departments may be needed to arrive at the decision, the involvement

of the Marketing Manager or the Marketing Department will ensure commitment in selling the products in addition to ensuring that the right quantities are provided to avoid stock outs or excess finished goods inventory that can create working capital shortages - a major problem at TUMPECO.

- 26.2.9. In the face of working capital shortages, knowing what to produce from the market feedback is even not enough. A further step is needed to ensure that products that make high contribution to sales and have high turnover rates are selected for production.
- 26.2.10. The marketing staff have been taken through the steps of determining products contribution to sales and the combination of products that ensures optimum sales. Appendix 2 illustrates the steps involved.

26.3. OPTIMUM SALES MIX ANALYSIS

- 26.3.1. The analysis of the sales mix for the first four months of the year 1992 indicates that a total contribution of 36,098,000/- was made.
- 26.3.2. Out of total sales of 116,305,000/-, the net loss for the period was 19,364,000/-.
- 26.3.3. Analysis of the total contribution per product line revealed that, Mattress and Carpentry lines made negative contributions of 791,000/- and 861,000/- respectively.

- 26.3.4. In addition to Mattress and Carpentry making negative contributions, the low contribution to the overall sales was significantly affected by ineffective sales mix. At 14% level of capacity therefore, the Company has no prospect of breaking even if the sales mix is not revised.
- 26.3.5. The Consultants are of the opinion that prior to determining the appropriate sales mix, the Carpentry and Mattress product lines should be absorbed by the Tool Room and Vono respectively. This is because they work more for Tool Room and Vono than for direct consumers and that their transfer costs are normally not recognised by the consuming departments.
- 26.3.6. On the basis of the foregoing therefore, sales effort for the rest of the year will be concentrated on the remaining three main lines - Tool Room, Signs and Vono. The average contribution ratios for these lines are 45%, 13% and 48% respectively.
- 26.3.7. During the first four months of the year 1992, total fixed cost as per TUMPECO records was 55,735,000/-. It is estimated that by the end of the year, this figure will be 167,205,000/-.
- 26.3.8. For reasons enumerated above, the Company did not operate at breakeven during the first four months.
- 26.3.9. In the opinion of the Consultants, an optimum mix of sales to break even at 14% level of capacity utilization would have been for the three profitable product lines as follows:-

TABLE 26(c)

ESTIMATED QUANTITIES AND THEIR VALUES

QUANTITIES ('000)		<u>))</u>	VALUE IN SHILLINGS ('000)
Tool Room	(T)	1070	47,113
Signs	(S)	314	4,711
Vono	(V)	1141	70,760
		2525	122,584
			-,

- 26.3.10. It is estimated that, for the remaining eight month period, May to December, the above sales mix would guide marketing programmes in order to generate additional sales of 245,168,000/-.
- 26.3.11. By the end of the year therefore, total sales expected will be 361,473,000/-. The estimated breakdown would be

TABLE 26(d)

TOTAL SALES EXPECTED

PRODUCT I.INE		Sales ('000)	MAY - DECEMBER, 1992 Estimated ('000)		
	<u>Units</u>	Sales Value (U.Sh.)	Units	Sales Value	
		10.511.)		<u>(U.Sh.)</u>	
Tool Room	719	31,663	2140	94,226	
Signs	3686	56,357	628	9,420	
Vono	436	27,012	2282	141,484	
		115,032		245 120	
Mattress	16	463		245,130	
Carpentry	22	810		-	
		116,305		245,130	
		22 本 2 2 2 2 2		XZZZZZZ	

- 26.3.12. It is important to note that 245,130,000/- is a breakdown sales volume for the 8 months. In order to make a modest net profit by the year end, a target of 20% of total debt outstanding at the beginning of the year (of 170,000,000) amounting to 34,000,000 is envisaged by 31st December, 1992.
- 26.3.13. For the subsequent 3 years, 1993, 1994 and 1995, capacity utilization levels are expected to be 20%, 25% and 30% respectively. At these levels, given that sales price remained constant and that fixed cost remained within the present limits, sales activities are expected to be as follows:-

TABLE 26(e)

1993 - 1995 PROJECTED UNITS AND
THEIR CORRESPONDING VALUES

LEVEL OF ACTIVITY	1 9 9 3 20%		1 9 9 4 25 \		1 9 9 5 30 %	
PRODUCT LINES	UNITS	SALES ('000)	UNITS	SALES ('000)	UNITS	SALES ('000)
Tool Room Signs Vono	3810 1122 4098	201,913 20,190 303,257	1147	252,391 25,237 379,071	1	302,869 30,285 454,885
TOTAL		525,360		656,700		788,040

26.3.14. With the coming into full operation of the enamelling in 1993 and afterwards, the sales mix for these years will change accordingly. At varying price levels therefore, the sales mix will be as below.

	1993		1994		1995	
	UNITS	VALUE	<u>units</u>	VALUE	<u>UNITS</u>	VALUE
Enamelling	128000		256000		384000	
Tool Room	3810	201,913	4071	252,391	4093	302,869
Signs	1122	20,190	1147	25,238	1165	30,285
Vono	4098	303,257	1259	378,071	4251	454,885

NEW PRODUCT DEVELOPMENT AND MARKET PENETRATION

- 26.4.1. The existing markets for metal products, excluding those from the Signs product line can be grouped as follows:-
 - Hospital
 - Domestic
 - Office.
- 26.4.2. Of the three markets, TUMPECO is covering only two the hospital and the domestic markets, while the Company's two major competitors cover all the three markets. Appendix 3 lists the various products produced by each of the three Competitors.
- 26.4.3. Table 26(f) below shows the growth alternatives open to the Companies.

TABLE 26(f)

GROWTH ALTERNATIVES

	Existing Products	New Products
Existing Markets	1. Market Penetration	2. Product Development
New Markets	3. Market Development	4. Diversification

EXPLANATION:

Market Penetration

The product exists and the market for the

product exists. Growth is through a bigger

share of the market.

Product Development :

The product is to be developed for a market

that already exists. The product will have to be introduced to the market.

Market Development

The product is already known. Efforts have to be made to find new markets for the

product.

Diversification

The product is new; the market is also new.

Table 26(g) shows the number of products offered by the three competitors in the hospital, domestic and office markets.

TABLE 26(g)

PRODUCTS OFFERED BY COMPETITORS

MARKET	NUMBER OF PRODUCTS OFFERED				
	TUMPECO	STEELEX	CLINICAL		
Hospital	11	19	24		
Domestic	36	7	7		
Office	NIL	8	6		

SOURCE: IMAS Survey

- 26.4.5. During the review exercise, Consultants discovered that metal products such as window frames, gates and wire mesh were already on the markets for individuals and building firms that were carrying out building construction works. Also, office furniture such as chairs, desks and filing cabinets were being produced by TUMPECO's main competitors Steelex and Clinical Equipment Limited.
- 26.4.6. While statistical data were not readily available as to the size and the extent of operations in these markets, the reasons for the emphasis by the competitors on the production of these products, especially the office furniture, are worth discovering.
- 26.4.7. A visit to one of the competitors production outfit revealed that only the office furniture were being produced at that time. While a similar visit to the

other competitor's outfit was not possible, information obtained showed that the two competitors offered the same office products for the office market (Appendix 3).

- 26.4.8. Consultants recommend that a market research be carried out in these markets to determine the sizes both existing and potential, the market shares of the Companies that are already serving these markets and their future prospects.
- 26.4.9. TUMPECO's entry into the office market, for example, will not require any major investments by the Company since almost the same raw materials, equipments and personnel that the Company is employing now will be required for the production of office furniture. In addition, the marketing expertise already acquired in the home and the hospital markets is easily adaptable to the office market.
- 26.4.10. In the hospital market where clinic equipment is on top in the number of products offered 24 products, followed by Steelex with 19 products, TUMPECO offers only 11 products. An examination of the products revealed that both clinic equipment and steelex produce most of the products that a hospital would need. The list includes the following:-
 - Birth Bed (Labour Bed)
 - Examination Couch
 - Patient Bed
 - Beside Locker
 - Drip Stand
 - Surgeons and Stools
 - Steps
 - Drugs Cupboards

- Linen Trolley
- Ward Screen
- Operation Table
- 26.4.11. Thus, providing one stop shopping facilities for the customer in hospital equipments because the customer is most likely to find any item needed for the hospital in that shop. In contrast, TUMPECO offers only the following:-
 - Patient Bed
 - Patient Trolley
 - Ward Screen
 - Drip Stand
 - Birth Bed
 - Bedside Locker
- 26.4.12. The result is that the customer who values product availability, time and convenience would want to shop at Clinic Equipment's or Steelex instead of TUMPECO, resulting in loss of sales to TUMPECO.
- 26.4.13. TUMPECO should offer products combinations that provide one stop shopping facility especially for the customer in a specialised area like the hospitals or schools.
- 26.4.14. At the time of IMAS's survey, TUMPECO's Management had no idea about the Company's shares of the markets in hospital and domestic products. This is a direct result of the absence of growth objectives resulting in the absence of any strategies to increase market shares.
- 26.4.15. Even in the domestic market where **TUMPECO** was leading with 30 different products, the few that the competitors offered are products that sell at high prices and have

455

high turnover rates. Consequently, there cannot be much differences in their respective market shares in this market.

- 26.4.16. To penetrate the markets, TUMPECO must apply aggressive marketing. For instance, it is a well known fact that road construction contracts in the country are awarded together with the erection of road signs. However, not many road construction firms are able or would want to perform the two together. They therefore choose to subcontract the signs part of the contract. TUMPECO is to obtain the list of road contractors that have been awarded contracts or stand a chance of being awarded contracts, approach them and negotiate for the sign contracts.
- 26.4.17. Furthermore, TUMPECO must use advertisements to position its products. For instance, TUMPECO's price advantage must be made known to customers.

26.5. PRICING PROBLEMS

26.5.1. Prices of TUMPECO's finished products are set by the Cost Accountant with the help of the Production Manager. The price of a finished product is determined as follows:-

PRICE = Production Cost + Other Fixed Overheads + Margin + Sales Tax.

The other Fixed Overheads and the Margin are worked on 20% and 30% of the Production cost respectively.

>

2 diven in Appendix 1.

26.1.2. Table 26(a) below shows the proportion of the product lines in the Company's total sales for 1991.

TABLE 26(a)

PROPORTION OF PRODUCT LINES IN 1991 SALES

PRODUCT LINE	SALES VALUE	\$ OF TOTAL
Tool Room Signs Vono Mattress Carpentry	54,495,000 158,107,000 39,363,000 1,666,000 575,000	21.45 62.20 15.48 0.65 0.22
TOTAL		

SOURCE: IMAS Computation

26.1.3. From Table 26(a), it can be seen that the Signs product line contributed 158,107,000/- representing 62.2% of the 1991 sales volume of 254,206,000/-. It is followed by the Tool Room product line which contributed 54,495,000/-representing only 21.5% of the 1991 sales.

456

- 26.5.2. Even though the other fixed overheads include distribution and sales costs, the Marketing Manager plays no role in setting the prices.
- 26.5.3. Consequently, the prices set do not take cognizance of the customers ability to pay and any other strategic sales objective of TUMPECO.
- 26.5.4. The method alienates the Marketing Department which is supposed to know how much the customer is ready to pay, and is supposed to convince the customer of his money's worth.
- 26.5.5. In addition to the problem of who sets the final price, prices of TUMPECO's final products have been increased by an average of about 100% since March 1990. Appendix 4 lists the absolute and the percentage price changes for the period.
- 26.5.6. The result is that there is a tendency for the Marketing Department to blame low or no sales on the Company's high prices.

TABLE 26(b)

NUMBER PLATE SALES

<u>YEAR</u> 1990	<u>\$ALE\$</u> 82,453,210	1 INCREASE
1991	139,231,000	-
1992	* 212,225,700	69
	212,225,700	52
		* (The first 4 months actual sales projected for the next 8 months)

- 26.1.7. These sales were realised with little or no marketing efforts because the Company has complete monopoly in the production of number plates guaranteed by the Government.
- 26.1.8. However, there is insecurity in relying mainly on number plates as the major source of income in the Signs product line.

457

26.5.9. Table 26(h) below lists the prices, their differences in both absolute and percentage terms of 3 competitors including TUMPECO - that produce double and triple decker beds. A complete list of the prices of the Companies is given in Appendices 3 and 4.

TABLE 26(h)

LIST OF PRICES AND THEIR DIFFERENCES IN ABSOLUTE AND PERCENTAGE TERMS

PRODUCT	PRICE	LIIHZ NI) 3	DIFFERENCE		
	TUMPECO	CLINIC	STEELEX	ABSOLUTE	1
Double Decker 25 x 6	92,900	111,140	111,140	18,240	20
Double Decker 3 x 6	98,800	121,980	121,980	23,180	23
Triple Decker 25 x 6	124,600	127,750	127,750	3,150	2.5
Triple Decker 3 x 6	131,600	160,000	160,000	28,400	21.6

26.5.10. The price comparison is only made on double and triple decker beds for the simple reason that TUMPECO has, in its

26.1.11. The Chief Accountant of TUMPECO echoed these fears during the review exercise:

"There has been a ban by the Government on the importation of motor vehicles that are 5 years and above. Turnover has been reduced from 24 million Shillings per month to about 10 million Shillings per month. The price of the Dollar is gone up. We fixed our prices for the number plates when the Shilling equivalent of the Dollar was 700/-. Today, the Shilling equivalent is 1200/- but number plates prices cannot be revised without prior negotiation with the Government." (See Appendix 9, Interviews with some members of Management).

26.1.12. Management's attention has been drawn to this insecurity and the need for a balanced and optimum product mix.

PRODUCT DECISIONS

- 26.2.1. Decisions concerning what to produce and how much to produce at TUMPECO are made without the knowledge and involvement of the Marketing Department.
- 26.2.2. The Production Department in consultation with the Engineering Department decides the type of product, the design of it and the quantity to be produced.

458

- 26.5.12. The retailer can only make a profit by fixing the selling price to cover all costs associated with the possession of the product before adding a profit margin. The result is a selling price that will be higher than the price TUMPECO offers to the direct users.
- 26.5.13. Consultants recommend that, under no circumstance should the pricing of a product be determined without the involvement of the Marketing Manager or his representative.
- 26.5.14. It is expected that the General Manager (GM) fixes prices based on detailed costing information per batch or job order and the Marketing Manager's report on the prevailing prices on the market and his specific recommendations.
- 26.5.15. The General Manager will thus be left with the alternative of increasing or decreasing the Company's margin in order to come up with a price at which sales of the products can be optimised.
- 26.5.16. The practice of adding a traditional charges of 20% of cost of product as factory overhead and 30% as profit margin must cease.

- 26.5.18. These charges must reflect the actual use of overhead. The practice must therefore obtain the prime cost for each item, and then establish the volume of overhead such as water, electricity and depreciation involved in its production.
- 26.5.19. Consultants also recommend that all the three prices factory, wholesale and retail should be made available to customers.
- 26.5.20. In order to use price to boost sales in the prevailing economic and competitive environment, Consultants have oriented Management's mind to customer-oriented pricing.

26.6. **DISTRIBUTION**

- 26.6.1. Technically, what obtains at TUMPECO cannot be described as a distribution system. The objective of distribution is to provide the customer with the possession of the product at a convenient time and place.
- 26.6.2. TUMPECO stores all its finished products in what is referred to as factory "Go Down" at the factory in Luzira, a suburb of Kampala. The "Go-Down" is where all the finished products are kept and sold direct to the customers.
- 26.6.3. This "Go-down" is serving both as the Company's Finished Goods Store and its one and only sales outlet. It is out of this store that everything TUMPECO produces is sold.

- 26.6.4. This "Go down" was, sometime ago, used in addition to a retail outlet in a building on Nkrumah road in Kampala. The retail outlet has been closed down for lack of funds for its operation. Ever since, all customers have had to travel to Luzira for TUMPECO's products.
- 26.6.5. TUMPECO makes no effort through advertising or promotion to let customers know what is in the store at any particular time. The customers only way of knowing what the Company is selling and at what prices is to travel all the way to Luzira.
- 26.6.6. This method of distribution which can at best be described as a direct channel from manufacturer to the end user is in fact exclusive distribution and is not best suited for the Company's line of products.
- 26.6.7. While a direct channel may work best for products that require technical advice before their use, TUMPECO products do not require such technical advice, and are mainly shopping goods with the following characteristics:-
 - Their use is expected to last over several years.
 - They are therefore infrequently bought.
 - They are relatively expensive.
 - Customers plan their purchase and shop around to compare prices.
 - They are sold in selected stores.
- 26.6.8. While TUMPECO is using only the direct channel, its competitors are making efforts to make their products available to customers at several and convenient locations.

26.6.9. Table 26(i) below shows and compares the distribution outlets of 3 competitors that deal in products such as beds and signs.

TABLE 26(i)

DISTRIBUTION OUTLETS OF 3 COMPETITORS

OUTLET USED	NAME OF COMPANY		
OOILEI OSED	TUMPECO	STEELEX	PELICAN
GO-DOWN	YES	YES	YES
SHOW-ROOM	NIL	YES	YES
RETAIL	NIL	YES	YES
AGENCY	NIL	NIL	YES

SOURCE: IMAS Survey

- 26.6.10. As can be seen from Table 26(i), TUMPECO's competitors are using, in addition to the Go-down, other channels for effective and efficient distribution.
- 26.6.11. TUMPECO's efforts have been nil in developing other outlets. The Company is still using only one outlet with the following accompanying problems:
 - Absence of proximity. It is time consuming and inconvenient for the customer to travel to Luzira for the goods. The Company, in effect, is opening up chances for competitors to enter the business.

- The cost of transporting the bulky items are prohibitive, thus adding more cost to a product that competes in a market where customers shop to compare prices.
- 26.6.12. The conclusion is that, TUMPECO, by keeping to this one outlet, is simply not distributing. Its method is making it difficult to achieve any of the objectives of distribution. The result is loss of sales to competitors even though its products are lower in prices.
- 26.6.13. Consultants recommend the opening of a Show Room in the business centre of Kampala to put on display all of the Company's products. Part of the sales budget earmarked for 1993 could be used to open the Showroom.
- 26.6.14. While the exact cost of the Showroom cannot be immediately determined, and in the event that the sales budget earmarked is not enough to cover the cost of opening a Showroom, the Company is to make a special allocation in the 1993 budget for this important aspect of distribution of its products. It is to start operating before the end of 1993. All the items in the Showroom must be tagged with their respective prices. It is to be manned by a Marketing Officer who will report to the Marketing Manager. The Marketing Officer is to be assisted by a Sales Assistant who will be in charge of keeping records (as directed by the Marketing Officer) and also keep the Showroom tidy at all times in addition to performing any miscellaneous duties assigned by the Marketing Officer.

る ことない あろいかり

- 26.6.15. Consultants also recommend that, in the absence of enough working capital, TUMPECO is to rely on agents to build an efficient nationwide network.
- 26.6.16. For a start, Commissioned Agents are to be appointed for every major city representing a region in the country. Every Agent will carry the products that are in demand in that particular region. In order not to lock up scarce working capital, every Agent will carry only a sample of TUMPECO's product items. Thus, an Agent's outfit will serve as a Showroom of TUMPECO in the region.
- 26.6.17. Operations of all agencies are to be consolidated into a (Warehousing) network. In the absence of a reliable telephone connection, a Salesman is to be designated for every region to pick and fill orders for the region on a timely basis. In addition, the Salesman will keep tract of all information on sales trends and the peculiar needs of a region.
- 26.6.18. To make customers both current and prospective aware of the presence of an agent in a region, there should be adverts in both the national and the regional newsprints.
- 26.6.19. TUMPECO should contact and interview potential candidates personally. In addition, a questionnaire must be completed to serve as a contract agreement. Questionnaire must provide information on storage facilities, financial reputation of the agent, experience in selling TUMPECO's type of products among others.

- 26.6.20. Selected prospects must be trained on how to handle customers and the Company's products.
- 26.6.21. Agents are to be paid commissions on a percentage of sales basis.

26.7. ADVERTISING AND SALES PROMOTION

- 26.7.1. All the investment by **TUMPECO** in product modification, development and quality improvements envisaged for the plan period must be reflected in sales improvements.
- 26.7.2. Sales will improve only when customers buy the Company's products. And customers will buy only when they know about both the Company and the products.
- 26.7.3. Customers will need to be informed, among other things, about the products; that they are available at the right places in the right quality and at affordable prices.
- 26.7.4. One main way of keeping customers informed is through advertisement. Yet this vital part of the marketing mix has been neglected by the Company's Marketing Department since 1986.
- 26.7.5. Advertisement has only been considered since the beginning of 1992 but on a very small scale:
 - Advertisement in the yellow pages costing 100,000/-
 - Advertisement in the new vision (size: 5 x 1) at 72,000/-.

Ark . MY

26.7.6. The lack of advertisement could be traced to its roots in the days when TUMPECO had a complete monopoly of the markets for its products.

- 26.7.7. As the market grew, instead of competing for a share, they were complacent and have therefore been overtaken by events.
- 26.7.8. An analysis of TUMPECO's operating expense reveals that, out of the sales over the period 1986 1991, the trend in sales and distribution expenses as a percentage of sales is as follows:-

 1986
 1987
 1988
 1989
 1990
 1991

 3.2%
 2.1%
 3.3%
 3.5%
 1.8%
 3.7%

SOURCE: IMAS Computations

- 26.7.9. The above listed percentage expenses could only result from sales and overheads of the Marketing Department over the period.
- 26.7.10. TUMPECO's relatively low prices is a very big advantage to the Company in the present inflationary and economic hard times in the country. But the lack of advertisement is keeping customers in the dark about the low prices therefore causing a loss in sales.
- 26.7.11. It came to light during the review exercise that the workings of a competitor included planting in the minds of customers the image that TUMPECO products are of inferior quality and are sold at cut throat prices. This negative image, if not corrected, can cost TUMPECO sales. Only advertising can quickly disabuse the minds of the public of this negative image.

- 26.7.12. In addition, for advertising to be effectively directed to boosting sales, it must be seen to be doing the following:
 - reassuring and retaining present or former customers. TUMPECO has been in existence since 1957. It is expected that a greater number of its old customers is considering new purchases. The Company has to get back former customers who are satisfied enough to repeat purchases. Again, customers need to be reaffirmed of the products virtues and values.
 - bolstering and increasing the confidence, enthusiasm and eagerness of TUMPECO's own personnel especially the sales force, and the non-TUMPECO personnel that will be engaged in the distribution of its products.
 - projecting a useful image to one or more of TUMPECO's various publics.
- 26.7.13. Against this background, the commitment to advertising must be directed to achieve, among others, the following goals:
 - promote the Company's products.
 - build a useful image for the Company.
- 26.7.14. Consumers must be made aware of all TUMPECO's products.

 To achieve this, the Company's products must be grouped under two main categories:
 - the products offered by TUMPECO alone, and products competitors also offer.
- 26.7.15. Under those competitors also offer, the advertising campaign must be designed to make consumers aware of the Company's competitive advantages. Consumers must be made aware, especially of the big price differences between TUMPECO's and the competitors' products.

- 26.7.16. During these hard economic times in the country, the Company must try to capitalize on its lower prices. Aware of the price differences, the consumer can make an informed purchase decision.
- 26.7.17. The media to be used should include the television, the radio and the newsprints. The television to be blanketed with acts that will present the Company and compare its products with competitors. The radio is intended to cover most parts of the country with messages about TUMPECO and its products. The newsprints are to be used to present pictures of products depicting main unique features and listing price differences.
- 26.7.18. Two of the main markets to be targeted for the campaign must be the schools and colleges that offer boarding facilities and will therefore need beds and desks and the hospitals that have needs for beds.
- 26.7.19. While the messages can be transmitted at any time of the year, the messages for the schools and colleges must be timed to meet the three months before new students are enrolled.
- 26.7.20. Consultants recommend that the advertising budget should be a fixed percentage of the sales.
- 26.7.21. In the first year of the period 1993, more work will need to be done to repair the damage done to the image of the Company and to increase induced demand. Therefore 73% of sales is to be spent on advertising.

This percentage will be reduced to 6½% in the second year because it is expected that sales will have gone up and therefore spending the same amount of money, in absolute terms, as in the first year will bring the percentage down. In the third year, the percentage is expected to drop to 5% of sales to sustain growth.

26.7.22. The target market will be determined by the type of product that is being pushed. For instance, an advert on beds is to be directed to the domestic market to the wards of new entrants to schools and colleges with boarding facilities. This audience could best be reached through the radio and the newspaper media. The newspaper will provide the best means to list TUMPECO's prices in comparison with competitors. On the other hand, if school bursars are in charge of purchasing beds for students then personal contact is recommended.

26.8. RESEARCH

- 26.8.1. The days are gone when TUMPECO only had to make its products available on the markets. Today, not only is TUMPECO finding it difficult to find new markets, it is also losing its own markets to aggressive competitors. It will be suicidal for TUMPECO to continue operating in its old ways.
- 26.8.2. Research is needed to find information that will help management to make quick and better decisions. The need for research has become even more imperative in view of the intense competitiveness that characterizes the dynamic environment.

- 26.8.3. Yet, it became clear during the operational review that the introduction of this all-important marketing activity has never been considered by management.
- 26.8.4. In the view of the Consultants, the main cause of this total lack of marketing research for all these years since competitors started entering the market has been the absence of a marketing function. Consequently, past and present operatives operated without the appropriate marketing direction.
- 26.8.5. As a result of the lack of marketing research activity, TUMPECO is not even aware of its comparative advantage in low prices.
- 26.8.6. Apart from not being aware of this advantage , the Marketing Department is blaming low and slow sales of the Company's products on high prices.
- 26.8.7. Consultants recommend that research should be conducted to find the major factors that push the sale of the Company's products. Specifically, research must find the customer's view on price and quality of the Company's products. The competitors moves and strategies too must be researched into. Research the customer to determine their needs and to check how they view TUMPECO's products and Company.
- 26.8.8. It is in TUMPECO's programme to reactivate the enamelling processing plant and start production of enamelled-hollowware products by 1993.

- 26.8.9. It is believed that the demand for these products is high in the local market and that prospects are high for exporting them.
- 26.8.10. While there is evidence to show that this product line earned more income for the Company during the time it was active, it may not be enough to rely on past records alone for its revival.
- 26.8.11. Consultants recommend a research into the markets of the enamel-hollowware products to determine the sizes and the impact of the present competition from imports.

26.9. PRODUCT OUALITY

- 26.9.1. The provision of quality materials at appropriate prices is a critical success factor to achieve the marketing objectives.
- 26.9.2. **TUMPECO's** Finished Goods (FG) Store is stocked with beds made with sub-standard materials.
- 26.9.3. Procurement is one of the main areas of concern in TUMPECO's operations and it is essential that action be taken to employ a qualified Purchasing Officer and to introduce better controls. However, granted that the right materials are bought and used, TUMPECO's finishing leaves much to be desired.
- 26.9.4. In the Finished Goods Store are stackable steel chairs, for example, that have sharp edges. Apart from not being nice they pose potential danger to the user since the sharp edge can tear a dress or even the skin.

- 26.9.5. While the Company may not be in a sound financial position to purchase and install the requisite equipment to enable TUMPECO to produce to a reasonable and perfectly acceptable quality, a simple hand tool as portable grinder may be obtained to help.
- 26.9.6. What is not certain is whether the Company has the skilled labour to enable it to maximise the potential value of the product.
- 26.9.7. Management has recognised the lack of adequate support from quality control and is planning to upgrade present quality control facilities but skill upgrading and technical training in the use of tools would be useful. There is also a need to engage the services of a suitably qualified Quality Control Officer.
- 26.9.8. Consultants are also aware that competitors have already changed from the use of round pipes to using square pipes to build the legs of tables and chairs. This gives the final product a better and a more stable appearance.
- 26.9.9. Since TUMPECO's use of round pipes gives the Company no competitive advantage and the switch over would not bring any extra cost burden, consultants recommend the use of square pipes. This at least would ensure that all competitors have the same lead start.

26.10. ORGANIZATION STRUCTURE

- 26.10.1. The chart, as depicted in Appendix 5, appears to be merely a pictorial representation of employees status staff and union or general workers designated as TS and TV respectively.
- 26.10.2. The chart depicts the Marketing Officer (MO) and the Purchasing Officer (PO) both TS4 as reporting directly to the Marketing Manager (MM).
- 26.10.3. Although they appear on the chart as TV1, the Marketing Assistant and the Purchasing Assistant are vacant posts.
- 26.10.4. The Purchasing Officer position is generating considerable controversy. Although the Purchasing Officer is still at post and reports to the Marketing Manager, a Committee runs the position.
- 26.10.5. The chart does not assign the running of the Finished Goods (FG) Store to anyone. It has been assigned to the Marketing Officer (MO). But the Marketing Officer is often times out, sometimes three times in a week, on outside duties including soliciting for sales orders. In that event, the Marketing Clerk is left in charge.
- 26.10.6. Although designated as Store Keeper on the chart, the Store Keeper's job is to keep stock of all purchased items. The chart depicts the Store Keeper as reporting to the Purchasing Officer the one who purchases the items.

CAST TO THE EXTE

- 26.10.7. The existing reporting structure of the department may be indicative of weak management of the department. The organizational structure does not appear to be designed to support the critical functions of the department.
- Under the Marketing Manager falls the role of Research an important function for a company that is weak in sales, that needs to penetrate the market, that needs to diversify as well as hold an emerging competition in check. The research job is a full time job for TUMPECO.
- 26.10.9. The structure, however, makes no provision for a Marketing Officer in charge of research nor a Research Assistant.
- 26.10.10. The Purchasing Officer is in direct control of own purchases.
- 26.10.11. Even though the department is selling finished products directly to customers, no provision is made for the sales position.
- 26.10.12. Consultants recognize the main functions of the Marketing Department as marketing and sales and recommend the structure in Appendix 6 to support these critical functions.

26.11. SALES INCENTIVES

- 26.11.1. TUMPECO's Management expects to achieve set goals during this medium term. Prominent among these goals are the production targets and the sales volume to be achieved as and when goods are produced.
- 26.11.2. To achieve the desired task calls for a realistic and objective consideration for the recognition of the human resource factor to be engaged in its achievement. In this connection, the need for effective accounting of the human resource component of the sales performance need not be overemphasized.
- 26.11.3. Productivity enrichment is equally an important factor to be considered in relation to the achievement of the targeted sales output. The effort of the sales force therefore, are to be linked up with productivity incentive package. Such a package should be formulated with the aim of inspiring the Salesmen to attain levels of performance beyond their average capabilities.
- 26.11.4. At the time of IMAS review exercise, it was revealed that a Salesman soliciting orders was given 700/- and 5000/- for transport to make a personal call within the city of Kampala and outside Kampala respectively.
- 26.11.5. The result has been that Salesmen have had to walk greater part of the time, thus killing motivation and prolonging the time a Salesman uses to make a call. The 5000/- safari allowance has never been enough for a Salesman to find a decent hotel accommodation which is estimated to cost 10000/- per night or more upcountry.

The fear of having to look for and not likely to find an accommodation of 5000/- per night is a big demotivator. The total effect has been a waste of time and loss of sales.

- 26.11.6. Consultants see a need for incentives and recommend the following guidelines:-
 - An incentive scheme to be approved by the Board of Directors soon as they are appointed should be worked out specially for the Salesmen. Bonus should be awarded to the Salesmen for higher performance at all times. The basis for awarding the bonuses should be percentages to be decided by Management, of the excess over targeted sales volume.
 - Active competition among the Salesmen must be encouraged. In this connection, recognition and commendation for high performances must be publicly made to the performing Salesmen. This can subtly be achieved by erecting a notice board with publication of weekly sales performances conspicuously displayed with charts. At the end of each year, the Sales Manager must be awarded a bonus, if the overall sales for the year exceeds the targeted sales, by a percentage to be decided by Management.

26.12. AFTER SALES SERVICE

- 26.12.1. Even though TUMPECO had an after sales policy set in place during the time of IMAS review, the policy could at best be described as non-existent for the following reasons:-
 - The only aspect of it spelt out clearly is the repair charge to the customer.
 - Responsibility was not assigned to any office or unit in particular.
 - The parts for the repairs were not available.

- 26.12.2. The service charge has been fixed at 50% of the original price purchase price of the product that needed the repair service. This charge, in the view of Consultants is ridiculous. The repair service may only call for the tightening of some few loose springs; the product may even be too old; and no records are kept on products sold. The charge scares customers away from making the repairs. Instead, they will choose to buy a new one but certainly not from TUMPECO.
- 26.12.3. Not knowing whom to report complaints to can be very expensive to the customer and can result in frustration and resentment on the part of the customer.
- 26.12.4. The unavailability of parts results in delays in providing the needed service.
- 26.12.5. The practice can result in loss of repeat purchase; it leaves affected customers to broadcast their bad experiences with TUMPECO resulting in a bad image that will scare new customers away.
- 26.12.6. The review exercise revealed that the after sales service is especially needed in the schools. Because the schools bought in bulk, they are the ones most affected. The school children also have a tendency to play with the beds and in the process remove the springs. There is therefore a need to stop the use of springs for beds intended for schools.

- 26.12.7. To remedy the situation, TUMPECO is to draw up a repair service policy. It must be a written down statement to be referred to at all times.
- 26.12.8. The policy must state, among other things, the following:
 - The unit or office responsible for repair services. The office will receive all manner of complaints, relating to products and after sales service.
 - The time within which calls will be responded. The office will investigate and respond to these complaints, and in emergency cases, institute immediate remedial action.
 - The service charge must not be a fixed percentage. It must be made on the basis of the materials and workmanship involved.
- The need for the service cannot be overemphasized. While the service is necessary to repair the broken down bods, including those produced three years ago, with substandard materials as TUMPECO admits, to reduce customer frustration and resentment, it can serve as a powerful tool to building good customer relationships and customer loyalty.

APPENDIX 1

Fixed Overhead Net Profit/(Loss)	17,091 214	14,204 (7,205)	10,140 3,312	8,191 (8,982)	6,109 (6,976)	55,735 19,634

Determining the Optimum Combination

Q1 : How many to be produced in the Company?

Ans: TFC

Avg. Price

55,735 = -----8

= 6967

Q2: How are you going to divide this 6,967 among the 3 producing product lines?

Ans: i. Multiply contribuT margin % for each area by the value for each product line and add them up to equate this to the Total Fixed Cost i.e. .45T + .135 + .48V = 55,735

APPENDIX 2 CONTD..

ii. Find the relationship between the ContribuT per unit i.e. T S X

.45 X 2/3V + .13 X 1/15v + .48V = 55,737
$$v = 70670$$
 $T = 47113$ $S = 4711$

Quantities ('0gg)

Value in Shillings (2000).

T	=	1070	47080
S	=	314	4710
Y	=	1141	70742
		~~~	
		2525	122532

This is what has been obtained for the first 4 months (January to April).

Therefore, Estimated Quantities and Values (May to December will be:

Quantity	<u>Value</u>
$1070 \times 2 = 2140$	94,226
$314 \times 2 = 628$	9,420
$1141 \times 2 = 2282$	141,484
	245,130

#### APPENDIX 5

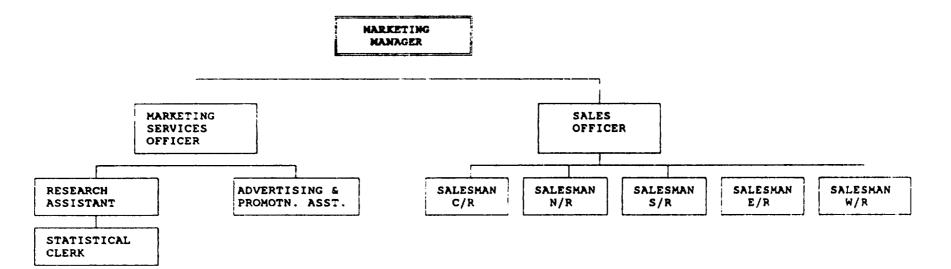

#### TEMPECO LIMITED PRESENT ORGANIZATION CHART OF MARKETING DEPARTMENT

37.34

#### APPENDIX 6

#### TUMPECO LIMITED PROPOSED ORGANIZATION CHART OF MARKETING DEPARTMENT

# TUMPECO LIMITED STEPS IN DETERMINING CONTRIBUTION TO SALES AND OPTIMUM MIX

- A) Finding products with highest contribution:
  - i. Know the selling price/unit
  - ii. Know the variable cost/unit
  - iii. Subtract (ii) from (i) = contribution per unit
  - iv. Contribution Margin Ratio = Contribution/Unit x 100

    Selling Price
- B) Finding how much of each to produce to break even:
  - i. Divide Total Fixed Cost (TFC) at the centre by the contribution/unit.
- C) Find Total Fixed Cost (TFC): Add up the TFC of each centre.
- D) Finding the contributions the various centres are making to TFC.
  - i. Subtract Total Variable Cost of each centre from the centres Total Revenue
  - ii. Add them up to get the contributions all the centres are making towards TFC.
- E) Find the total units produced * Add up the units produced by each centre.
- F) Find average contribution per unit (average price) =

  D ____ Total Fixed Cost of the centres producing

  E Units Produced
- G) Finding how much to be produced by the centres producing  $\frac{C}{C} = \frac{TFC}{C}$

F Average ContribT/Unit

- H) Multiply each centre's contribution by its contribution margin ration; add them up to get TFC
  - i.e. 0.45 x T + 0.135 + 0.48V = TFC where T = Tools S = Signs V = Vono
- i. Find their equivalents, ie. establish the other centres as a function of the product with the highest contribution

i.e. 
$$T = -\frac{2}{3} - V$$
,  $S = -\frac{V}{15}$ 

- ii. Substitute the values obtained in H)
  ie. 0.45 (2/3V) + o.13 (V/15) + 0.48V = TFC
- J) Solve for V, T and S.

- Civilian Vehicle Number Plates 1.
- Government Vehicle Number Plates

## TUMPECO LIMITED

## INTERVIEWS WITH SOME MEMBERS OF MANAGEMENT

## A) Chief Accountant:

I would want to give my views on the following:-

- Signs Number Plates
Other Sign Posts

- Tool Room Vono

- Enamelware

#### Signs

We have a big problem in this because of our monopoly. Average revenue was 24 million shillings per month but there has been a ban by the Government on importation of motor vehicles above 5 years. The economy is poor. Turnover has been reduced from 24 million to about 10 million shillings per month.

ie. April - 2 million shillings
May - not more than 2 million.

Raw materials (aluminium sheets) are available for the production of signs.

Again the price of the U.S. Dollar is gone up. It is now one dollar to 1200/-. It was 700/- not long ago.

We fixed our prices for the plates when the dollar was 700/-but we cannot give the prices of number plates without negotiating with the Government.

For the sign posts we face a very big competition. The most notable is Pelican - a company based in Kenya. There is therefore a need for marketing survey and research to overcome this competition.

#### Beds

The market for beds is seasonal especially double deckers because they are demanded by schools. Materials for beds were obtained on EADB loans. We are to pay back. Because of the change in dollar value we are underpricing the beds. But the customer cannot afford our revised prices. There is still stiff competition in the beds market. The firms producing them are many. Again, I am not satisfied with the quality of our beds. Marketing and production have to go to institutions to do repairs on beds at affordable charges.

#### Mattresses

The type we produce here (spring mattresses) are supposed to go with spring beds. But this fashion is outmoded. The customer is looking for the new type which is a foam mattress. We therefore make them on order. There is very little revenue from this department.

## Carpentry

The personnel is not skilled in this area. All the materials are obtained locally so why is our product not selling? They need training to improve their skills. Carpentry in this country is very competitive. Again, there are so many firms in the industry producing all types of products.

## Enamelling Department

When it was in production, it was giving us more revenue than signs department. But for lack of working capital it was closed down. To reactivate it calls for a huge sum of money. Customers are still asking for these products. It will be reactivated if we have money. The market for these products are the rural areas.

## B. Production Manager:

._5

We have some unique products - reflectors, enamelware (there is no competitor in the country), and signs.

We have a chance to monopolize the markets in these areas. We have not done this and increasingly we are losing this monopoly. Our difficulties are in financing and shortages - not enough orders are coming in, and we also have a problem with debt collection.

One of our major strengths is that our equipments are not so bad.

- Q : Why are orders not coming in. Is it because they are not there or because we are not looking for them?
- Ans: (a) There are competitors.
  - (b) We are not doing enough; we could do more than we are doing now.
  - (c) The main consumer is government, and the government has cut down its budget by 70%. This affects us in both direct and indirect ways. Direct because government orders are not coming. Indirect because it is the biggest employer so these customers are not spending.
- Q : Why do you say you could do more than you are doing now in terms of getting orders. What precisely could be done?
- Ans: We have to stay in touch with the regular and potential customers. We have to maintain good public relations. We have to know our competitors. We have to give a commission of 25% to anyone who can bring a sizable order; and give discounts up to 5%
- Q : There is a risk dealing with the government in signs. If we are to shift emphasis which area would you tackle first?
- Ans: Enamelling to be reinstated immediately.
  Reasons are: Taxes (sales tax and import duty) have been reduced from 50/30 to 10/10. This gives us an urge in pricing.

There are people who insist on using enamelware. They do not like plastics, so the market exists. It has a potential for export. This will be at a later stage after we have started production. However, its production calls for

- (a) high capital injection
- (b) power consumption.

In the areas of Toolroom and furniture, a lot of competitors have made inroads into our markets. We need research before we can increase their production. On carpentry, I cannot say much but raise quality - our finishing is not good.

For spring mattresses, we could do something to improve quality but I do not think there is a market for it. The taste of customers have changed. People now prefer the foam.

Reflectors: There is a good potential there in road signs and reflectors. I suggest we pay "Cola" to get the business.

O : We hear of customers returning items and complaining about finishing.

Ans: Inadequate supervision and attention will solve this. Also, there is inadequate support from quality control. The equipments that give a good finishing are not operating properly or they are not there. We have a problem to control pilferage of the finishing tools.

## C) Marketing Manager:

# Distribution Suggestion

The Company should acquire trucks to assist in delivering products to the customers. Two trucks would be enough. They would serve the customers who buy economical quantities of 50 beds onwards.

We should open our own stores and also use agents. The agents are to be used for upcountry and stores for Kampala. It is economical to supervise our own stores in Kampala than upcountry. It is good to run our own stores but due to the costs involved, it is better to use agents upcountry.

Q : What are your criteria for selecting agents?

Ans: Should have warehouses or storage facilities; good financial reputation; must deal in furniture or related products; they must have at least 5 years experience in running stores.

🖯 : ႏေνν many agents?

About At least one in each major town is. about 10 for now, (for Jinja, Tororo, Mbale, Sorote, Guru, Arura) to cover East and North. For the West: Masaka, Mbarara, Kabale, Fort Porto.

Q : How do you want agents to operate?

Ans: In order not to put the Company at risk they should pay cash for the items but we have to give them a good profit margin. They should pay at least 10% below the present cost of items.

## Markets

9 : How do the schools and colleges buy?

And: Pay for items and take care of our transport.

Q : What have been their complaints so far?

An : They complain about our prices. They have been doing this cince 13th March 1992. About 6 school have been here and left for other places.

The number of boarding schools in Uganda is 142 at present. The total new intake is 15,180 (boarders). Assuming they have to beds it means 7,590 are needed this year. Schools started in January. The number of double deckers bought so far is 190. Most of the schools are now using metallic beds bought from welders by the road side. Such beds sell between 25,000/ and 50,000/-.

# Other Markets

The people in the urban areas buy the double deckers for their children.

Q : What is your market for number plates?

Ans: - Ministry of Finance

- Ministry of Works for government motor vehicle (including the police)
- Ministry of Defence.

Q : At what price?

Ans: 25,000/- a plate for motor vehicle 9,800/- a plate for motor cycles.

## Bales Promotion and Advertisement

Our past record has not been good in this area.

Q : If the Company has 1 million shillings for you for the above how will you spend it?

Ans: Although this cannot be enough, I will use for the following:-

- (a) We will want to take part in the trade show at Lugogo in Kampala. 5 million shillings is needed for this. This is in October, 1992 during the independent anniversary.
- (b) Adverts on Television, need 500,000//-

Message: The product we have

 Steel furniture, sign posts, spring mattresses.

Q : What is special about steel furniture?

Ans: It is our main line for schools and colleges.

O : What is special about sign posts?

Ans: Because we use reflective material so it can be seen both day and night. They last longer - colours do not pool off.

Q : What is special about spring mattresses?

Ans: They are more comfortable because diplomats come here for it.

Q : How about Radio messages? To whom?

Ans: For rural areas and heads of institutions.

Q : What discounts do you want to give to your customers?

Ans: At least 5% if purchase is over 1 million. 5% because it will not affect our profit margin much.

Q : Why did you go to EEC and what did you tell them in 1991?

Ans: I went to EEC because I knew they were financing the programme of preventing forest destruction and siting villages anywhere in the forest. I know they would need sign posts to warn people about areas to avoid. Their purchases for 1991 was roughly 10 million shillings.

Q : Any other programme you can take advantage of this time? Ans: No.

# Competitors

Q : What percentage of the market is for TUMPECO?

Ans: I am not sure.

Q : What are the strengths of your competitors?

Ans: Quality, price, .....

## Organization

Marketing of all Company's products - This must be clear to the position because of present price is given by Financial Accountant.

Tob descriptions must be documented and given to the person occupying the position.

O : Do you have enough personnel in your area?

Ans: No.

0 : Who else is needed?

Ans: There were 3 MO's before the end of 1991 but 2 resigned at the beginning of 1992 and have not been replaced.

Q : What problems has their resignation created for you?

Ann: Only one Marketing Officer left to do all the work and especially going out to solicit orders.

Q : Can you quantify the loss?

Ans: No.

Q : Do you mind the sex of a Marketing Officer?

Ans: A male, preferably because of the several trips upcountry. Women do absent themselves too often.

Q : Do you have any changes to make in MO duties or job descriptions?

Ans: No.

Q : Do you like the new arrangements (purchasing falling under the Marketing Manager)?

Ans: Yes.

Q : Any reasons?

Ans: It will put me in the picture to know the lost of raw materials which I think is on the high side.

Q : How will you handle the technicalities involved?

Ans: We will have the technical people to assist.

## Interview with Marketing Officer

 $\ensuremath{\mathcal{Q}}$  : You are to go to the field to collect orders, how do you do it?

Ans: Different ways: Because business stopped sometime ago, our regular customers are not aware we are producing. So I have to go and inform them.

Q : Since when?

Ans: Around August last year.

Q : How far have you gone?

Ans: I have already informed the prominent ones. But there are still those starting.

I am trying to find from television adverts about new ones to

get in touch with them.

Q : Will it not be quicker to check for these from the Ministry of Education?

Ans: Primary, secondary and technical. But the primary and technical But the primary and technical. But the primary and technical. But the primary and technical. But the primary and technical But the primary and technical.

Talk to friends to help locate charitable organizations. Follow up on those who make inquiries.

Q : How often do you do this?

Ans: It is not scheduled. It depends upon the need.

Q : What is the need?

Ans: Where there have been inquiries, I go about 3 or 4 times a week (for those within Kampala).

Q : Outside Kampala, how often?

Ans: Once a week if they are many but I do not normally go out.

O: How do you go?

Ans: I am given money for transport.

Q : Who provides the money?

Ans: Previously, I was writing to the Chief Accountant or the Internal Auditor or the Financial Accountant. But of late, I fill a requisition form to be given to the Head of Department of Marketing. It goes through Internal Auditor, Chief Accountant to the General Manager. The General Manager is the one to approve it.

Q : Why is it that you are the one doing this?

Ans: The Marketing Manager was the one supposed to do this. But when our new General Manager came she realised there is need to go to the field and so asked me to do that. I therefore report to her on that.

Do you like doing it?

And: Yes. It is interesting but at times frustrating and very cumbersome.

Q : Do you need more people to help in this?

Ans: Yes.

Q : How many?

Ans: I need somebody to go upcountry and another one to stay at the station. I suggest 2 people to do this.

O : Do you think if the Marketing Manager were to do this he will need any help?

Ans: Not really because the problem is transport. There are places I can only access by bicycles.

Are you paid extra for doing this?

Ans: Only Safari allowance. It is 5,000/-/day when out of Kampala. Within Kampala, nothing. Within Kampala, I have to come back to the Company to take lunch.

O : How much transport do you receive for within Kampala?

Ans: I have to state where and they calculate the taxi rate. Where no taxis, I have to walk.

Q : Do you think a man will do this better than a woman?

Ans: If we were using motor cycles, yes. But to go by taxi as I do there is no difference.

Q : You are still the only person to keep the sales books?

Ans: I do this after I return from the field. That explains why I an not able to do it daily.

Q : How do you introduce yourself to a customer or company?

Ans: Our company has visiting cards.

Q : What are some of your problems in the field?

Ans: It is not on appointment. So the customer may not be around. Convincing them that we are producing is a problem because some of them think it is a lie.

Some express immediate interest but the price scares them.

Q : Apart from price what do they complain about?

Ans: Quality. About 3 year ago, we were using substandard materials.

NB: We must direct our adverts to tackle such a problem.

Q : What about finishing?

Ans: To me the finishing is not good but the customers do not complain about it. If the customers complain about finishing in the shop, we rectify it for them.

Example: General purpose trolley was once making noise. Customer complained and we had it rectified. Note the others had already bought from the same stock.

Q : What advice do you have for the Company?

Ans: To have a Quality Controller.

Before setting prices we should at least check with our competitors so that ours are not so different from theirs.

We should increase prices gradually not all at once.
ie. double decker moved from 65,400 to 92,900//-. This they feel is too much.

Q: Why?

Ans: I know we have been using the same materials for the two prices but purchasing says the price for the materials is gone up.

The one doing this must be motivated.

Q : What motivation and why?

Ans: If the transport money is enough, people will be motivated to go to several places. Even if they have to walk. But there is no allowance for this job (especially within Kampala). The Kampala one for instance, should remain at 5,000/- too. With regards to upcountry, it must not remain at 5,000 but should be adjusted with respect to the distance - at least from a radius of 20 miles outside Kampala 40 kilometres.

Q : How about places where you have to sleep?

Ans: I do avoid to go to places like that because I know 5000 is not enough for spending the night. If you have to spend a night you get 10,000 in addition to the 5000. But it is difficult to find boarding and lodging with that amount.

Q : How much have you earned for the company since you started doing this (in August 1991)?

Ans: At least a third of the Company's sales (excluding number plates value). I know this because when they call they let me know.

# Problems in the Marketing Department

0 : What are some of your problems here?

Ans: The biggest is marketing because we rely on selling instead.

Q : Why on selling?

Ans: Because we sit and wait. There are other things we can do instead of sitting and waiting.
