**CENTRALISED DATABASE ON INVESTMENT AND TRADE**  
**UNIDO FINAL REPORT**

**INTRODUCTION**

KPMG Peat Marwick & Partners (KPMG) is pleased to present its final report on JAMPRO's centralised database system.

**PROJECT OBJECTIVE**

The objective of this project is the design and development of an automated system for investment and pre-investment activities. The primary objective of the automated system is to strengthen JAMPRO's capabilities in the promotion of investment and trade.

The project was conducted in four phases as follows:

- Phase I - Validation of Requirements
- Phase II - Systems Development
- Phase III - Systems Acceptance Testing
- Phase IV - Implementation

The requirements definition study which examined JAMPRO's overall information systems need was undertaken by KPMG and reviewed by a joint KPMG/JAMPRO team. One outcome of the review process was the decision to integrate the design of Marketing Information System being funded by UNIDO into the overall centralised database system design which emerged as a result of the above study. The design review team also took the decision to develop the system in the fourth generation language Informix. The primary reason for this decision was to facilitate electronic information interchange between JAMPRO and other Government entities who, for the most part were beginning to standardise around Informix.

## **SYSTEM DESIGN OVERVIEW**

This section of the report provides an overview of the design features of the centralised database facility. An entity relationship diagram, screen and report layouts as well as a data dictionary are provided in the accompanying appendices.

The key requirements of the centralised database system were:

- Users should be able to access information without having to learn the rigours of a computer language.
- The system should rationalise and minimise the maintenance of redundant data.
- The system should support multiple users and sites.
- Users should have access privileges according to their level of authorisation to assure data security.

The following strategies were adopted in the design process:

- Existing documentation including corporate plans, divisional work programmes, current organisational charts and a computer system design done by Coopers and Lybrand were reviewed to develop an understanding of the organisation and its environment, and to identify any new developments or constraints which were to be taken into account in the design of the system.
- User requirements were updated through an information gathering process using questionnaires and interviews followed by a detailed analysis of the information gathered on existing operations.
- Existing software applications were evaluated to determine the feasibility of integrating these applications with the proposed centralised database and to identify functions and features which should be replicated in the design of the centralised system.
- Requirements gained from the above sources were then reconciled in a draft requirement definition document which was reviewed with individual users and the user committees established for this purpose.
- A draft report was submitted to JAMPRO. This report was extensively reviewed by the various user groups within JAMPRO.

The next step of the design process was to incorporate the above feedback into a finalised study. This study formed the basis for the remainder of the systems development process, viz systems development, acceptance testing and implementation.

## **CENTRALISED DATABASE DESIGN**

The centralised database system design consists of the following sub-systems:

### **1. Project Tracking System**

This sub-system records, classifies and actions enquiries made of JAMPRO and will track investment and trade-related activities between JAMPRO and its clients.

This sub-system produces reports on the progress of projects through the various stages from preliminary, through pipeline, through to implemented. Reports will be available by sector, by size of capital investment, by location and by country of origin.

This sub-system also provides one of the inputs to the mailing list module of the Information Centre Sub-system described later in this document.

This sub-system will be used by all JAMPRO officers. Group Directors and above will have access to the entire database, all other personnel will access only the information they would have inputted.

### **2. Business Profiles**

This sub-system maintains information on the:

- Products and services which JAMPRO has targetted for promotion.
- Characteristics, growth potential and competitive data related to the various markets which JAMPRO has targetted for penetration.
- Companies which have been assisted or facilitated by JAMPRO, or which have been targetted for promotion of potential business opportunities.
- Characteristics, growth potential and market intelligence related to the sectors which JAMPRO has targetted for promotion.
- Details, i.e., size of physical plant (where applicable), location, capital investment, employment and financial projects, etc., of projects/programmes which have been initiated, assisted or facilitated by JAMPRO.

This sub-system will also provide input to the mailing list module of the Information Centre Sub-system and will be accessible to all JAMPRO officers. Group Directors and above will have access to the entire database, all other personnel will access only the information they would have inputted and information which is not defined as confidential.

### 3. Trade Information System

The Policies/Agreement module of this sub-system maintains information on policies, agreements and regulations governing tariff and duty rates and market access in general.

This module will provide information on governing agreements, etc., by products and/or by market. A synopsis of the key provisions of each agreement, policy or regulations will be included.

The Export Registration, Export Certification and Quota Management systems remain essentially unchanged from the perspective of the user. However, because these databases are of significance to a wider community within JAMPRO than the current design envisaged, the processing behind these systems will be converted to the common Informix software platform.

The Export/Import Prices module will provide information on export and import prices of products in the various markets of interest to JAMPRO. The system will maintain up to three years' pricing history for any product.

### 4. Business Opportunities

This sub-system allows for the matching of investment interest with potential investment opportunities. Clients seeking assistance of whatever nature (eg., joint venture partner, technology assistance, market representation) will provide a profile of the opportunity being offered. This database of available opportunities will be queried by potential business partners for a match with their particular interest. There are provisions for periodic update of the status of each opportunity.

This system will provide query access to all JAMPRO officers and similar access to the public envisaged, in time. Group Directors and above will authorise the input of new business opportunities profiles.

### 5. Information Centre

The Information Centre provides access to project-related correspondence, feasibility studies, research papers and any publications available within JAMPRO on the different sectors, products, services and markets.

This sub-system includes an option to access the ISIS system maintained by the documentation centre. The Film Library which is for the primary use of the film office of JAMPRO will also be a feature of this sub-system. This library will maintain a catalogue of slides, photographs, etc., which the film office needs to access on an on-going basis in its contact with film directors and producers. A similar catalogue of brochures, flyers and fact sheets will be maintained by the public relations library. This library, however, will be accessible by all officers of JAMPRO. The Public Relations Division will have the capability of advising users on the current and future availability of promotional material and respective Group Directors will have the ability to request multiple copies of relevant promotional material in advance of major events such as trade shows, seminars and missions.

This module will maintain on a sectoral basis lists of contractors, suppliers and professionals with specialised skills who are of interest to JAMPRO in its daily activities of promoting investment and trade.

A statistical database (including national and international data) on investment and trade will also be maintained here.

Procedural details on how to export and how to establish an investment will be available on-line or via hard copy print-out to all JAMPRO officers.

A centralised mailing list of persons and companies will also be available in this sub-system.

As a result of the centralised database facility, the Public Relations Division will be able to use the project tracking system to manage the organisation of major promotional events and will use and update the mailing list based on participants at these events. A list of upcoming events per sector, per month, will be available to users of the Public Relations Library.

## 6. Utility Option

A number of functions related to maintenance of the system has been grouped under the utility option.

- Telecommunications Link

This option is used to establish communication between the JAMPRO network and a remote network, eg., another JAMPRO office located in or outside of Jamaica.

- Public Access

This option could allow the public to access specific modules of the system at a subscription rate to be determined by JAMPRO. Through this medium, an investor could obtain statistical or price data on a particular product, or search the business opportunity sub-system for an investment or trade opportunity which that investor could pursue.

- Archive

This option is the tool for backing up the database.

- Restore

This utility is run if there is a malfunctioning of the system, or following a power failure during which the data may have been corrupted.

- Upload and Download Options

The upload allows for the transfer of data from electronic storage media to the JAMPRO network.

The download options allows JAMPRO to provide information on electronic storage media to interested parties. Depending on the requirements of the enquirer, JAMPRO can download the entire database or a portion of the database.

Data transfer standards will be established to ensure that data upload and download are possible between systems on the wider JAMPRO network.

- **Purge**

This option deletes files which are no longer required, once these files have been archived.

- **Word Processing, Spreadsheet and Database**

The Word Processing (including access to form letters), Spreadsheet and Database options provide access to the standard software packages available to users.

- **Update Reference Files**

This option allows the user to update the different codes to be used in the system.

The following section identifies the modules and options which were subsequently developed and implemented on the basis of the design outlined above.

## **MODULES DEVELOPED AND IMPLEMENTED UNDER CURRENT UNIDO CONTRACT**

The modules of the centralised database system which have subsequently been developed, tested and implemented are as follows:

- **Market/Product Profile**
- **Company Profile:**
  - **Company Particulars**
  - **Administrative Data**
  - **Market/Payroll Data**
  - **Production Capacity**
- **Export/Import Prices**
- **Along with the relevant Utility Options.**

The table, **overleaf**, lists the technical activities which were specified in our workplan for the project. The current status of the various activities is also noted.

### **IMPLEMENTATION DETAILS**

#### **System Testing**

The first round of testing was performed by the system development team. Once they were essentially satisfied another group of KPMG Information Technology personnel conducted the second round of testing. Once this group was satisfied then a Jampro team was invited to perform a third round of tests. On successful completion of all three rounds the system was implemented.

Each round of testing involved repeated tests and spanned the three stages described in the System Test Plan included in Appendix VI. The respective options were tested according to the plan and testing or development wasn't complete until the desired results were attained.

### **System Training**

The development team included Ms. Yvette DeLeon, Systems Analyst of Jampro. This inclusion provided Ms. DeLeon with practical training in system development using Informix, as well as exposure to the preparation of program specifications, the writing of user manuals and the rudiments of system testing. A train the trainer training approach was employed and both Ms. DeLeon and Mr. Livingston Group Director of Information Systems, were trained in this capacity. Additionally, both these personnel are equipped to perform both the Database and System Administrator functions. Consequently, Jampro now has the in-house ability in Ms. DeLeon and Mr. Livingston to provide on-going training of the Jampro staff with the guidance provided by KPMG Peat Marwick through the attached Training Plan.

### **System Implementation**

The system was developed and tested in a multi-user environment on Jampro's hardware at KPMG Peat Marwick. As such, installation constituted the physical return of the equipment to Jampro and successful on-site testing of the system.

A system conversion plan is included in Appendix VII and will guide Jampro as to how existing data may be converted into the Centralised Database system as required.

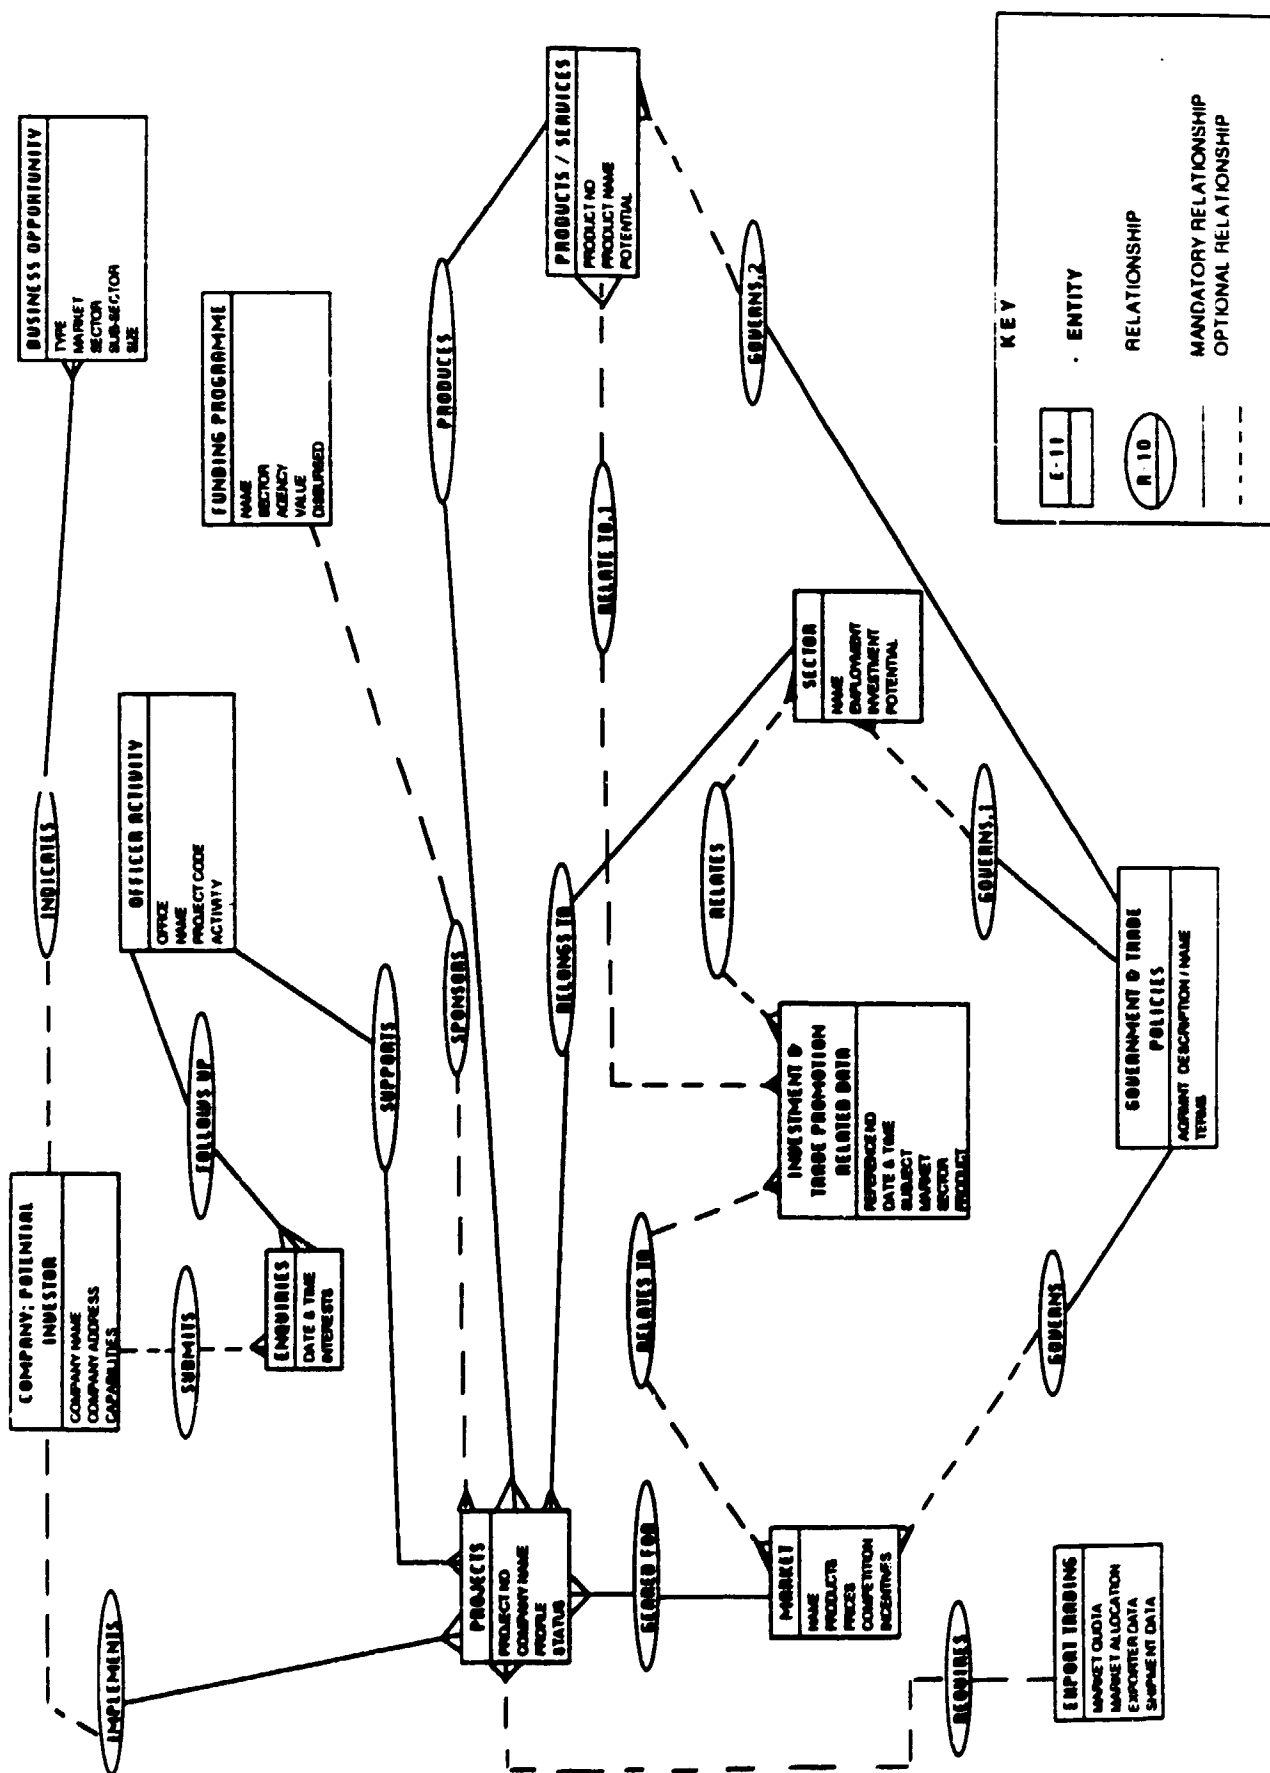

The table, **overleaf**, lists the technical activities which were specified in our workplan for the project. The current status of the various activities is also noted.

**APPENDIX IV**

***DATA GATHERING FORMS***

## GUIDELINES FOR COMPLETION OF DATA COLLECTION FORMS INFORMATION SYSTEM REQUIREMENTS

### INPUTS

1. Title of source document or input form used (eg. invoice).
2. What is the purpose of the document or what activities does it support (eg. to update customer A/R balances).
3. From which department or from whom does the document come (eg. sales).
4. On what media does the source information come (eg. hard copy or disk file).
5. Indicates how the source document (or information) should be handled (eg., for salary maintenance form, sensitivity would be high)
6. Volume or number of copies of source documents received(eg. 400 invoices)
7. How frequently are the documents (or information) received, (related to the volume produced eg., daily, monthly)
8. What happens to the document or information after it has been processed (eg. invoices are filed or passed to collections).
9. Are there any conditions which would cause the source document to be rejected (eg. payee missing from a cheque).

### OUTPUTS

1. Title of report or output form produced (eg. invoice).
2. The activity which produces the output (eg sale of goods).
3. What the report or output produced is used for (eg. to record sale of goods).
4. The persons or divisions who receive report (eg. Accounts Payable, customer).
5. On what media is the report produced (eg. screen, hard copy)
6. Indicates how the report should be handled (eg., for salary maintenance form, sensitivity would be high)
7. Volume or number of copies of report produced (eg. 400 invoices)
8. How frequently is the output generated (related to the volume produced eg. daily, monthly)
9. Time in which the output must be generated (eg. (1) week after the last day of the month for Balance Sheet).

## PROCESSING

1. Describe the major processes performed (eg. prepare customer statements)
2. Who performs the tasks (eg. Accounts Receivable Clerk)
3. How is the process performed (eg. manually or automated)
4. What information is used to perform tasks (eg. invoices and record of payments)
5. What is the outcome of the processing activity (eg. customer statement)
6. List tasks performed to complete process (eg. list outstanding invoices, record payments, calculate net amount)
7. List any validations performed on processing (eg. calculations cross checked by supervisor)

INPUT NAME/ DESCRIPTION	OBJECT /PURPOSE (ACTIVITY SUPPORTED)	SOURCE	MEDIA	SENSITIVITY	VOLUME	FREQUENCY	DESTINATION AFTER PROCESS	INVALID ENTRIES
1. Work Programmes & Budget	To outline all the activities to be undertaken by each Division and the financial support required.	Group Directors	Written reports	Open to all	8 volumes	Annually	-	Unrealistic goals or lack of financing
2. Monthly report	To keep the President & Vice President updated on activities that have occurred over the past month and to have a record of these activities for reference	Group Directors	Written	Non-sensitive	8 volume	Monthly	To President for Board Report	-
3. Monthly Statistical Report	To be kept updated on the level of investments generated by the activities of officers	Management Information System	Hard copy	Non-sensitive	1 volume	Monthly	-	Wrong entries
4. Budgetary Expenditure Update	To be advised on the level of expenditure of the different divisions and to be assured that events budgetted for, can be financed	Accounts Department	Hard copy	Open to Group Directors	1 page for each division	Monthly	V.P & Group Directors for monitoring	Incorrect entries

**APPENDIX V**  
***TRAINING PLAN***

**JAMAICA PROMOTIONS CORPORATION**  
**CENTRALISED DATABASE FACILITY**

**TRAINING PLAN**

Training plans are an important element of the system implementation plan. The purpose is to ensure that all personnel associated with the system possess the necessary knowledge and skills to perform their defined tasks, and have an overall appreciation of the system.

The training plan provides details of the courses to be conducted and their duration, the location and pre-requisites, if any, the group targetted and the group's size.

The training plan, like the system, targets two (2) groups of users; staff and database administrators. Staff users are those persons who will update the system and generate reports. They are primarily responsible for ensuring the integrity of the data. There are no specialised training requirements for staff users.

The Database Administrator(s) has the responsibility for the organisation and control of the database. The Administrator's job is to provide services to both data processing personnel and the end users. Consequently, this person must be able to communicate with both groups; and must be technically conversant with the environment and the tool used in the development of the system.

**OBJECTIVE**

The objective of the training activity is to facilitate and accelerate the integration of the system within the organisation. Presentation methodology will include lectures, training guides, demonstration and hands-on exercises.

The training brings to the organisation the skills needed to obtain optimum results from the system. The training will help to develop knowledge in the following areas :

Specific to the Centralised Database System :

- System Access,
- Data Input,
- Report Generation,
- Reference Files Maintenance,
- System Administration,
- Database Administration,
- Data Communication Fundamentals.

**CENTRALISED DATABASE FACILITY****USER TRAINING**

<b><i>Course Title:</i></b>	System Access
<b><i>Course Objective:</i></b>	Upon completion of this module participants will have a basic knowledge of the features of the system.
<b><i>Target Group:</i></b>	All users
<b><i>Topics include:</i></b>	<ul style="list-style-type: none"><li>• System Overview;</li><li>• System Login;</li><li>• Password Management;</li><li>• Menu Selection;</li><li>• Computer Operations Management.</li></ul>
<b><i>Prerequisite:</i></b>	None
<b><i>Methodology:</i></b>	Lecture presentation, discussion and practical exercises.
<b><i>Duration:</i></b>	2 hours
<b><i>Maximum Participants:</i></b>	5

## CENTRALISED DATABASE FACILITY

### USER TRAINING

- Course Title:** Data Input I
- Course Objective:** Upon completion of this module participants will be able to enter new records, retrieve information, and make changes to the data stored in the system.
- Target Group:** All users
- Topics include:** Data Input and Editing for :
- **Project Tracking :**
    - Business Enquiries,
    - Client Management,
    - Activity/Itinerary Details,
    - Update Project Status,
    - Project Assessment - M.O.I.,
    - Promotional Activities.
  - **Business Profile :**
    - Market/Product Profile,
    - Product Carriage Information,
    - General Company Profile Details,
    - Administrative Company Profile Details,
    - Company Production Capacity Details,
    - Project Profile.
  - **Business Opportunities :**
    - Opportunity Profile,
    - Match Opportunity,
    - Funding Programme.
  - **Information Centre :**
    - File Information Registry,
    - File Movement Information Registry,
    - Query on Document Registry,

- Correspondence Information Registry,
- Mailing List,
- Film Library,
- Public Relations Library,
- Contractors and Suppliers,
- Documentation Centre (ISIS).

The above will be conducted on the basis of comparisons of the manual procedures with the automated system.

***Prerequisite:***

- Computer appreciation;
- Keyboard skills.

***Methodology:***

Lecture presentation, discussions, practical exercises.

***Duration:***

5 hours

***Maximum Participants:***

10

## CENTRALISED DATABASE FACILITY

### USER TRAINING

<b>Course Title:</b>	Data Input II
<b>Course Objective:</b>	Upon completion of this module participants will be able to enter new records, retrieve information and make changes to the data stored in the system.
<b>Target Group:</b>	Film Office staff
<b>Topics include:</b>	Data Input and Editing for : <ul style="list-style-type: none"><li>- Capital Expenditure - Film Office,</li><li>• Information Centre:<ul style="list-style-type: none"><li>- Film Library,</li></ul></li></ul> <p>The above will be conducted on the basis of comparisons of the manual procedures with the automated system.</p>
<b>Prerequisite:</b>	<ul style="list-style-type: none"><li>• Computer appreciation;</li><li>• Keyboard skills.</li></ul>
<b>Methodology:</b>	Lecture presentation, discussions, practical exercises.
<b>Duration:</b>	2 hours
<b>Maximum Participants:</b>	10

## CENTRALISED DATABASE FACILITY

### USER TRAINING

<b>Course Title:</b>	Data Input III
<b>Course Objective:</b>	Upon completion of this module participants will be able to enter new records, retrieve information and make changes to the data stored in the system.
<b>Target Group:</b>	Trade Centre staff
<b>Topics include:</b>	<p>Data Input and Editing for :</p> <ul style="list-style-type: none"> <li>• Trade Information :             <ul style="list-style-type: none"> <li>- Policies/Agreements,</li> <li>- Export Registration,</li> <li>- Export Certification,</li> <li>- Quota Allocation,</li> <li>- Company Allocation,</li> <li>- Export/Import Prices,</li> <li>- Textile Information,</li> <li>- Visa Information,</li> <li>- Consignee Information,</li> <li>- Update Export Quota,</li> </ul> </li> </ul> <p style="margin-left: 40px;">The above will be conducted on the basis of comparisons of the manual procedures with the automated system.</p>
<b>Prerequisite:</b>	<ul style="list-style-type: none"> <li>• Computer appreciation;</li> <li>• Keyboard skills.</li> </ul>
<b>Methodology:</b>	Lecture presentation, discussions, practical exercises.
<b>Duration:</b>	2 hours
<b>Maximum Participants:</b>	10

## **CENTRALISED DATABASE FACILITY**

### **USER TRAINING**

- Course Title:** Report Generation I
- Course Objective:** Upon completion of this module participants will be able to display and print reports.
- Target Group:** All users
- Topics include:** Generation of the following reports:
- **Project Tracking :**
    - Officer Activity,
    - Investment Activity by Sector,
    - JAMPRO-assisted Companies,
    - Summary of Investment Projects,
    - Tour Itinerary.
  - **Business Profile :**
    - Product Listing,
    - Sector Statistics,
    - Product Carriage.
  - **Trade Information :**
    - Exporter Registry
    - Exporter to Consignee
    - Quota Status
    - Visa Information
    - Company Allocation
    - Statement of Account
    - Consignee to Exporter
    - Production Facility
    - Company Product Material
    - Policies/Agreements

- **Business Opportunities :**
  - Business Opportunities
  - Funding Programme
- **Information Centre :**
  - File Movement Information,
  - Correspondence Dispatch Listing.
  - Correspondence General Listing,
  - Correspondence - No Action,
  - File Information,
  - Mailing List Information,
  - Contractors and Suppliers Information.

At all times the above will be conducted on the basis of comparisons of the manual procedures with the automated system.

***Prerequisite:***

- Computer appreciation
- Keyboarding skills.

***Methodology:***

Lecture presentation, discussions, practical exercises.

***Duration:***

4 hours

***Maximum Participants:***

- Course Title:** System Administration
- Course Objective:** Upon completion of this course participants should be able to:
- Perform the Backup Process;
  - Perform the Backup Process;
  - Set up and Maintain User Accounts;
  - Set up and Maintain Passwords on Options;
  - Identify the important characteristics of various data communications technologies;
  - Be familiar with the various components and functions of data communication circuits installed at their site;
  - Be able to distinguish between line and system faults;
  - Have an appreciation of telecommunications security measures applicable to their environment.
- Target Group:** System Administrators / Group / Division Heads
- Topics include:**
- Standard Practices for System Administration.
- Prerequisite:** Computer appreciation.
- Methodology:** Lecture presentation and discussion.

***Duration:*** 3 hours

***Maximum Participants:*** 10

**APPENDIX VI**

***TEST PLAN & RESULTS***

**JAMAICA PROMOTIONS CORPORATION  
CENTRALISED DATABASE SYSTEM**

**SYSTEM TEST PLAN & RESULTS**

The objective of testing any software is to ensure that the documented requirements agreed to are fully satisfied. The Requirements Definition and Specification for the system provide the basis for the acceptance testing process. This process involves a number of steps which may have to be repeated several times ; therefore the testers must exercise due diligence in the performance of the software testing.

To ensure that the system test is successful, **test data** has to be prepared. This means that data to be entered into the system and the expected results from different operations has to be clearly indicated prior to the start of the testing.

The system is first tested at the module levels. Module testing should preferably be done by users who are familiar with the business processes. Any errors found during testing are addressed by the developers and the system retested. When the tester is satisfied that the requirements have been met and the system is error free; the integrated system is tested using the same procedure.

### Stage I :

The first stage of the system testing includes testing of the **parsing of the modules**. The user must be able to enter and exit each module without any problem. Each option must be called in turn and exited without any problem. A Top-down design approach has been employed therefore any modules not available on the system must be clearly indicated when called (stub).

### Stage II :

Stage II covers the **data entry** testing of the respective options i.e. ensuring that data is accepted and validated and the responses given are consistent with those specified in the program specifications. Each screen is tested beginning with the **login screen** or the system access option.

1. Both **correct and incorrect data** must be entered for all fields, to ensure that the validations are correct and the entry screens behave the way they should under all conditions. Wrong keys are deliberately pressed etc.
2. The tester has to choose all **functions** available within each option and ensure that the correct messages are returned; and the process returned to the correct stage of the procedure. e.g. back to the start of the entry screen.
3. Ensure that **calculations** for calculated fields are correct.
4. The **screen layout** must be consistent with that of the system design specification. The headings must be consistent etc.
5. The normal movement of the **cursor** must be from left to right and from top to bottom.

6. The **function keys** should only perform the specified operations and if there is no specified operation for a key it should be deactivated. The **arrow and page keys** operate in their normal manner.
7. The **validation and error messages** returned must be in keeping with the operation performed or the error encountered.
8. The person testing the system must have the required **access rights** to the option and to perform the operations. These rights must be changed in turn to ensure that the security is fool-proof i.e. rights that allow the user to access the options and vice versa are assigned throughout the process to the same tester.
9. The tester must note the response time of the system and record any abnormally slow response time.

The remainder of this document details the tests to be performed for each option. These tests were repeatedly performed by both KPMG and JAMPRO personnel before the system was accepted by JAMPRO, once they were satisfied that the desired results had been attained.

Use the designated key to save the record. Redisplay the record and change the values in some fields. Try adding the record a second time to the database. An error should occur in the process, use the appropriate function key to update the database with the changed data.

Create another record and select one record for deletion. First delete a single price range entry for a particular grade and clear the screen.

Redisplay the record to ensure that the database has been updated correctly then select the entire record for deletion. Clear the screen and attempt to redisplay this record to ensure that the deletion was successful.

**BUSINESS OPPORTUNITIES****OPPORTUNITY PROFILE**

<b><u>FIELD</u></b>	<b><u>ACTION</u></b>	<b><u>RESULT</u></b>
Company Code Company Code Company Code	Enter an existing company code Leave the field blank Enter a non-existing code	Corresponding record displayed Company popup displayed User is given the option to add or select from the popup
Company Name	Try to enter this field	Field must be displayed only
Opportunity Type Opportunity Type	Enter "OFFER" or "NEED" Leave the field blank	Accepted Opportunity number will not be generated
Opportunity Number Opportunity Number	Try to enter this field	Field must be displayed only Must be generated uniquely after the sector code is entered
Opportunity Number		It is formed from the opportunity type, sector code and a sequential number

Sector Sector Sector	Enter a valid code Enter an invalid code Leave the field blank	Popup displayed Popup displayed Popup displayed
Market Market Market	Enter a valid code Enter an invalid code Leave the field blank	Popup displayed Popup displayed Popup displayed
Annual Prod. Size Annual Prod. Size Annual Prod. Size	Enter a positive numeric value Enter a non-numeric value Enter a negative numeric value	Accepted Not accepted Not accepted
Annual Prod. Units Annual Prod. Units Annual Prod. Units	Enter a positive numeric value Enter a non-numeric value Enter a negative numeric value	Accepted Not accepted Not accepted
Opportunity Value Opportunity Value Opportunity Value	Enter a positive numeric value Enter a non-numeric value Enter a negative numeric value	Accepted Not accepted Not accepted
Opportunity Status Opportunity Status	Enter "M", "UM" or "CA" Enter an invalid code	Accepted Error message displayed

Use the designated keys to save the record and clear the screen.

Access the record from the database and try to delete one business opportunity. If the status is not "MATCHED" then the record will be deleted otherwise an error message is displayed.

Change the status of one opportunity to "Matched" and try deleting all opportunity profiles for the company. An error message will be displayed since there exists at least one matched opportunity.

Save all changes and redisplay the record to ensure that the database has been updated correctly.

**BUSINESS OPPORTUNITY**  
**MATCH BUSINESS OPPORTUNITY**

<b><u>FIELD</u></b>	<b><u>ACTION</u></b>	<b><u>RESULT</u></b>
Company Code Company Code	Enter a valid code Leave the field blank	Accepted, name displayed Error message and popup displayed
Company Code	Enter an invalid code	Error message and popup
Opportunity Code Opportunity Code	Enter a valid code Enter an invalid code	Accepted Error message will be displayed when the search is conducted
Opportunity Code	Leave the field blank	Accepted
Product Product Product	Enter a valid code Leave the field blank Enter an invalid code	Accepted Accepted Error message and popup displayed
Sector Sector Sector	Enter a valid code Leave the field blank Enter an invalid code	Accepted Accepted Error message and popup displayed

After the last field, all valid opportunities should be displayed, otherwise a message is displayed indicating that there are no valid or existing opportunities.

Opportunities that are displayed must have a status of "UNMATCHED" and must conform to the user input values.

Select an opportunity to be matched and input "N" for manual matching. Enter the values in the fields above for the matchee. All unmatched opportunities with the same product and sector code as the matcher and satisfying the other user criteria entered will be displayed. Select the most suitable opportunity and save the changes.

Repeat the matching process, this time entering "Y" at the prompt for automatic matching. Ensure that the opportunities displayed are unmatched and that they have the same product and sector codes as the opportunity to be matched. Select the most suitable opportunity and save the changes.

**Repeat the matching process, this time attempting to match a company with itself or with an inactive company. Error messages should be displayed in both instances.**

## BUSINESS OPPORTUNITY REPORT BY SECTOR

<u>FIELD</u>	<u>ACTION</u>	<u>RESULT</u>
Sector	Leave the field blank	Accepted
Sector	Enter an invalid code	Error message displayed
Sector	Enter a valid code	Accepted, name displayed
Status	Leave the field blank	Accepted
Status	Enter an invalid code	Error message displayed
Status	Enter a valid code	Accepted, name displayed

Use the designated key to send the report to the screen.

1. If the sector and status code is entered, ensure that the report is generated only on those values.
2. If any of the above input fields is left blank, ensure that the report is generated on all possible entries for that field.
3. Ensure that a sub-total is printed after each sector change and a total at the end of the report.
4. The report should be ordered by status and sector values.
5. Ensure that the totals have been generated correctly.
6. Ensure that there is no truncation of character and numeric values.
7. Ensure that the report pages are numbered sequentially.
8. Ensure that the report headings are relevant to the report.
9. Repeat the processes, this time directing the report to the printer.

## MANTAIN FUNDING PROGRAMME DATA

<u>FIELD</u>	<u>ACTION</u>	<u>RESULT</u>
Funding Agency Code	Enter an existing code	Corresponding record displayed
Funding Agency Code	Enter a non-existing code	Message displayed, and first screen of the company profile displayed
Funding Agency Code	Leave the field blank	Popup displayed

Programme Code	Enter an invalid code	Error message and popup displayed
Programme Code	Leave the field blank	Error message and popup displayed
Programme Name	Try to enter this field	Not possible, field contents are displayed only
Start Date	Enter an invalid month/day/year	Error message displayed
Start Date	Leave the field blank	Error message displayed
End Date	Enter invalid month, day or year	Error message displayed
End Date	Enter a date > the start date	Error message displayed
End Date	Leave the field blank	Error message displayed
Sector	Enter a valid code	Corresponding name displayed
Sector	Enter an invalid code	Error message displayed
Sector	Leave the field blank	Error message displayed
Programme Value	Enter a positive numeric value	Accepted
Programme Value	Enter a non-numeric value	Not accepted
Programme Value	Leave the field blank	Error message displayed
Programme Value	Enter a negative numeric value	Not accepted
Amount Disbursed To-Date	Enter a positive numeric value	No access to this field
Amount Disbursed To-Date	Enter a non-numeric value	No access to this field
Amount Disbursed To-Date	Leave the field blank	No access to this field
Amount Disbursed To-Date	Enter a negative numeric value	No access to this field

<b><u>FIELD</u></b>	<b><u>ACTION</u></b>	<b><u>RESULT</u></b>
Additional Funding Amount	Enter a positive numeric value	Accepted
Additional Funding Amount	Enter a non-numeric value	Not accepted
Additional Funding Amount	Leave the field blank	Error message displayed
Additional Funding Amount	Enter a negative numeric value	Not accepted
Date	Enter an invalid month, day, year	Error message displayed
Date	Enter a date greater than the end date of the programme	Error message displayed
Date	Enter a date less than the start of the programme	Not accepted

Use the designated key to save the record and clear the screen.

Access the record from the database and try deleting it. This should not be possible since the status of the company in the master file has not been set to "CANCELLED". Change the status to "CANCELLED" and try deleting the record.

## FUNDING PROGRAMME REPORT BY SECTOR

<u>FIELD</u>	<u>ACTION</u>	<u>RESULT</u>
Sector	Leave the field blank	Accepted
Sector	Enter an invalid code	Error message displayed
Sector	Enter a valid code	Accepted, name displayed

Use the designated key to send the report to the screen.

1. If a sector code is entered, ensure that the report is generated only for that sector.
2. If the sector code is left blank, ensure that the report is generated on all possible sector values.
3. Ensure that a sub-total is generated for each sector change and a total at the end of the report.
4. Ensure that the totals are generated correctly.
5. Ensure that the report is ordered by sector.
6. Ensure that there is no truncation of character and numeric values.
7. Ensure that the report pages are numbered sequentially.
8. Ensure that the report headings are relevant to the report.
9. Repeat the processes, this time directing the report to the printer.

TRADE STATISTICS DATA

<u>FIELD</u>	<u>ACTION</u>	<u>RESULT</u>
Country of Origin	Leave the field blank	Error message, popup displayed
Country of Origin	Enter an invalid code	Error message, popup displayed
Country of Origin	Enter a valid code	Accepted, name displayed
Destination/Market	Leave the field blank	Error message, popup displayed
Destination/Market	Enter an invalid code	Error message, popup displayed
Destination/Market	Enter a valid code	Accepted, name displayed
Product	Leave the field blank	Error message, popup displayed
Product	Enter an invalid code	Error message, popup displayed
Product	Enter a valid code	Accepted, name displayed
Year	Leave the field blank	Error message displayed
Year	Enter non-numeric data	Not accepted
Year	Enter a negative value	Not accepted
Quantity	Enter non-numeric data	Not accepted
Quantity	Enter a negative value	Not accepted
Quantity	Enter a positive numeric value	Accepted
Value	Leave the field blank	Error message displayed
Value	Enter non numeric data	Not accepted
Value	Enter a negative value	Not accepted
Value	Enter a positive numeric value	Accepted

Use the designated key to add the record to the database. Clear the screen and redisplay the record to ensure that it was saved correctly. Change some field values and try and update the database with the changes. Redisplay the record to ensure that the changes were saved correctly.

Create another record for deletion. Use the designated key to delete the record. Clear the screen and try to access this record. This should not be possible.

Return to the menu and select the Import option then the Enter Data option. Repeat the tests outlined above.

Select the Export option then the Import data option.

Enter the source drive of the data to be imported and confirm the selection of the import routine. On completion, try to access an imported record by entering the country of origin, destination, product and year to ensure that the data was correctly imported.

**TRADE STATISTICS REPORT**

<b><u>FIELD</u></b>	<b><u>ACTION</u></b>	<b><u>RESULT</u></b>
Country of Origin	Leave of field blank	Accepted
Country of Origin	Enter an invalid code	Error message displayed
Country of Origin	Enter a valid code	Accepted, name displayed
Destination /Market	Leave the field blank	Accepted
Destination/Market	Enter a invalid code	Error message displayed
Destination/Market	Enter a valid code	Accepted, name displayed
Product	Leave the field blank	Accepted
Product	Enter an invalid code	Error message displayed
Product	Enter a valid code	Accepted. name displayed
Trade Year	Enter non-numeric data	Error message displayed
Trade Year	Enter a negative value	Not accepted
Trade Year	Enter a valid year	Not accepted
Trade Year	Leave the field blank	Accepted

Use the designated key to send the report to the screen.

- 1 If any of the above input fields are left blank, the report is generated for all possible values in those fields.
- 2 If an entry is made in any input field, ensure that the report is generated only on that particular field.
3. Ensure that a sub-total is printed for each destination/market and year change and a total at the end of the report
4. Ensure that the output is ordered by country of origin, destination/market and year.
5. Ensure that the sum totals have been generated correctly.
6. Ensure that there is no truncation of character and numeric values.
7. Ensure that the report pages are numbered sequentially.
8. Ensure that the report heading is relevant to the report.
9. Repeat the processes, this time directing the report to the printer.

**APPENDIX VII**

***CONVERSION PLAN***

**JAMPRO  
SOFTWARE CONVERSION PLAN**

**TASK**

1. Identify all data files/data elements across all existing systems which will be uploaded to Informix, and their sites/database locations.
2. Identify and document the structure and content/values of each data file/element that will be converted to Informix.
3. Identify Informix table/data element into which the data identified in (1) will be incorporated and document the structure of the destination table/data element.
4. Document ASCII layout format needed as input to each Informix destination table/data element identified in (3).
5. Convert data files (DBASE or otherwise) identified in (1) to ASCII files.
6. Format ASCII files such that they are in the specified layout as documented in (4).
7. Execute conversion such that the data in the ASCII files are uploaded to the Informix tables as described on overleaf.
8. Conduct conversion test by addressing any errors that may have arisen during conversion and by checking the Informix tables for the data uploaded. Informix data files/elements content/values should match those documented in (2).
9. Backup the newly loaded database

**JAMPRO SYSTEMS**  
**HARDWARE AND SOFTWARE**  
**CONVERSION PLAN**

**GUIDELINES TO CONVERSION**

When the source data is not an Informix data file the data must be transformed into a flat ASCII file, ie. a file of printable data in which each line represents the content of one table row. The field type, size and the sequence of the fields should be the same as those of the Informix target table.

Once the data is available in a flat ASCII file it can be loaded into the Informix source table using the DBLOAD or the LOAD commands. DBLOAD must be executed from the Unix prompt, while the LOAD command is used within SQL and with the help of the SQL INSERT command. Examples of DBLOAD and LOAD commands are shown below

```
$ dbload -d jamprocorp -c profile.cmd -l errs
```

The -d flag signifies the database name, the -c flag the command file, and -l flag indicate the file to which errors will be written. The content of the file 'profile.cmd' is shown below :

profile.cmd

```
# The file /u/jampro1/tempdir/data.unl contains the data to be inserted into
# the Informix table called profdup and would have been created or copied
# to this directory before the DBLOAD is initiated. The delimiter | is the
# character which is used to separate each field, and the number six tells the
# system the number of fields to be inserted into each record.
```

```
file "/u/jampro1/tempdir/data.unl" delimiter "|" 6 ;
insert into profdup
```

```
# end of file profile.cmd
```

To execute the LOAD command you may use DBACCESS to select the database, to create and to run the SQL commands or you may execute all these commands on the SQL command line. The LOAD command should be of the form.

```
LOAD FROM "pathname" [DELIMITER "char"]
INSERT INTO table-name [(column-name [...])]
```

The order of the columns listed must be the same as that of the columns in the target table.

Before inserting the new rows be sure to turn off transaction logging, this will allow the insertions to go much faster. These insertions can be easily recreated in the event of a failure.

**JAMPRO SYSTEMS**  
**HARDWARE AND SOFTWARE**  
**CONVERSION PLAN**

Transaction logging should be restored at the end of the insertion process.

**APPENDIX VIII**

***IMPLEMENTATION CHECKLIST***

**HARDWARE AND SOFTWARE  
ACTIVITY CHECK LIST  
FOR THE IMPLEMENTATION OF JAMPRO'S  
CENTRALISED DATABASE SYSTEM**

1. Conduct site inspection to determine hardware, telecommunication and infrastructural requirements.
2. Identify existing hardware and the additional hardware and infrastructure that will be used .
3. Prepare list of new hardware, telecommunication and infrastructural requirements.
4. Initiate and monitor hardware and telecommunications services procurement.
5. Identify hardware and telecommunication system training required for each category of user.
6. Identify database administrator(s) to be trained.
7. Install and commission hardware and telecommunication system.
8. Install and configure system software.
9. Carry out system software test.
10. Install and configure application software modules.
11. Conduct user training.
12. Conduct software testing.
13. Carry out data conversion.
14. Conduct conversion test.
15. Perform pilot implementation using selected user group(s).
16. Review results of pilot operations.
17. Make appropriate modifications.

**HARDWARE AND SOFTWARE  
ACTIVITY CHECK LIST  
FOR THE IMPLEMENTATION OF JAMPRO'S  
CENTRALISED DATABASE SYSTEM**

18. Implement system on a phased basis.
