TOURISM INVESTMENT PROBLES

MADAGASCAR

Elaborated Study as part of the project UNDP / UNIDO
"Investments Promotion in Madagascar's Tourism sector"
- MAY 1996 -

TECHNICAL SPECIFICATIONS

ARCHITECTURE

DISPOSITIONS

WARNINGS

The classification standards set in this outline are conformed with the different laws and implementing decrees about the Tourism code voted in 1995.

In the frame of the international standardization, these classification standards have been essentially elaborated according to European standards, except for certain cases because of the infrastructure problems encountered in the island.

It is also worth mentionning that in the frame of the Madagascar destination promotion and the investment incentive, a stamp of quality will be assigned by the Tourism House for collaboration and will be recognized by all the professionals in Madagascar (a national equivalent of Gault and Millaut / or of French Michelin Guide)

THE CLASSIFICATION STANDARDS OF TOURIST HOTELS AND TOURIST RESIDENCES

TOURIST HOTELS

DESCRIPTION OF DISPOSITIONS		CAT	EGOR	RIES

--	-------------------	--	---	---	---	---	---

PRECISIONS

- P1 Maximum number of persons per room: three (four in the 50 % of the rooms) under the surfaces conditions, the equipments (particularly a mobile seat per person) and fitness for habitation.
- P2 Except on the floors where all rooms have a telephone.
- P3 The telephone inside the rooms can be replaced by a call system for the one star hotels.
- P4 Subject to the requirements of the departmental sanitary rule. Moreover this surface is reduced into a square metre in case of the air regeneration or if the third person's bed is collapsible or transformable into a couch.
- P5 Subject to the requirements of the departmental sanitary rule. Moreover this surface is reduced into a square meter in case of pure air regeneration in a square meter per person (beyond the second person) where the bed is collapsible or transformable into a couch.
- P6 The bunk-beds are only allowed in the permanent or seasonal hotels with no star and one star category, and in the seasonal hotels with two stars.
- P7 Are deducted from this contingent of rooms with bidet, the rooms which have private bathrooms or showerrooms beyond the minimum of 40 % to two stars and 80 % to three stars hotel.
- P8 The partition can be made of light materials but rigid, impermeable and fire resistant. The sanitary place must be equipped with a door, folding and sliding doors or extendable (admissible).

- P9 A private bathroom should be equipped with a lavabo, a bathtub or a shower and in a luxuous four stars hotels with a bidet. It is entirely closed if possible in masonry and equipped with a ventilation system (window or ventilation shaft eventually). It is equipped with a sliding door or extendable (admissible).
- P10 The hotels classified on the implementation date of the present decree are not kept to be reclassified in the same category, in order to satisfy these percentages with the private bathrooms or showerrooms and W.C, if they have common bathrooms showerrooms, or W.C in a proposition of 1 to 12 persons lodged in the rooms without private bathrooms or showerroms or W.C.
- P11 For hotels within the minimum percentage required of 2% in each category, an insufficiency of rooms with baths or showers or toilets (W.C) classified on the implementation date of the present decree, is accepted if it has in addition, an equivalent number of rooms with toilets (W.C) in the first hand and with baths in the second hand.
- P12 At least 50 % with bath and shower.
- P13 With bath and shower.
- P14 The toilets (W.C) can be set in private bathrooms or showerooms, except for the rooms for two, three or four persons in luxuous hotels with four stars.
- P15 Are not required when all rooms are equipped with private bathrooms or showerrooms.
- P16 At the hotels with three or four stars and luxuous four stars, a spot light must ensure the lighting on the table. It must be possible to switch on and off the principal source of lighting of the room from at least one bed.

- P17 One room must be available for the breakfast service if it is not served inside the rooms. This room can be part of the restaurant if there is no lounge.
- P18 The restaurant must ensure the catering food, even simple one.

....

SPECIAL DEROGATIONS

Special derogations could be granted by the Republic Commissioner after notice from the tourism action Departemental Commission.

- D1 Subject to the respect of the minimum number of rooms, a classified hotel can have rooms with no standards that fit its category, in a proportion of 20 % in the no star and one star categories, and 10 % in the two stars category. The classification decree shows that they are not classified for tourism. The guest will be informed during his stay.
- D2 In case of justified technical problems, possible restrictions with seven rooms.
- D3 In case of justified technical problems, possible special derogation.
- D4 As for hotels with little capacity, possible derogation.
- D5 As for the existing hotels on the implementation date of the present decree, possible reduction of 10 % of these areas in maximum, when the new setting of the bathrooms or showerrooms or the sanitary appliances partitioning (lavabo and bidet) cannot be realized without this reduction. These derogations would not hinder the measures departemental sanitary rule.
- D6 The minimum number of private or common bathrooms or showerrooms can be reduced into 30 % at the thermal stations establishments.
- D7 As for residential hotel, possible reduction to common W.C and lavabo at the reception pavilion.

PROJECT

COMPLEX HOTEL

LUXUOUS SEASIDE TYPE

AMPOHANA (RUSSIAN BAY)

THE PROJECT ENVIRONMENT

Location, physical factors

The project settlement

Opposite of Nosy Be, it is located on the North East side of the hills surrounding the Russian Bay. The peak of Ampohana indicates the boundaries in the East.

The surface

The sector has a beach of 1700 meters widthewise, with about 300 meters of depth, thus a surface of 41 ha.

The relief and topography

There is a beautiful view from the sea: a gentle slope of ground and flows on the implantation site. The hills form the background. The East zone is smooth enough for receiving favorable approbations which makes the settlement easier.

Accessibility, viability and space organization

The accessibility

The site is only accessible by sea, but the improvement of the roadlink (about 2,5 Km) would connect it with the marina of the Russian Bay. A landing runway (1000 m to 1200 m) could also be built in the South of the peninsula for a direct access by small carriers.

The viability, the ressource in water

Water is available because of the streams. The fishers in Ampohana are able to get water not too deep from the surface. There is a possibility of arrangement of the different rivers around the site.

The improvements centering

The sector can be divided into three parts:

The west part which is near the hills, permits the settling of an unit.

The central part is occupied by the village and by few precarious installations on the site of a future International level complex.

The East part is free and gives a large space for few complexes and sports equipements.

Tourist ressources and excursion value

The natural environnement

The sector extends on a large panoramic bay. The site and the landscape are very beautiful. The sand is white and fine. The sea permits the approach by ships and the swimming because it is very clear and the beach is protected by a lagoon.

The exploitable specific products

The sector has great possibilities for receiving many units who would come to verify the infrastructure enforcement such as the landing runway, the marine, the roads, the nautical improvements, the different equipments (social, publics,...).

The whole sector could be put at the tourist pole level of international class. The hinterland could also be improved for receiving a golf of 18 holes on a surface of 65 ha and hills slopes could be occupied by the condominiums or by the luxuous residential houses (exceptional high set up site).

Implantation: technical and architectural characteristics

The project site is implanted at the Russian Bay (Cf sector II of the study) on the "great land" and in front of Nosy Be island. There are many implantation sites possible, for instance Ampohana Bay.

It is possible to settle rapidly there new concerns under the compact pavilions form with fully viability (road of circulation between complexes and towards "the marine"), in other words, it consists of many blocks of rooms in order to avoid the high blocks of concrete and is characterized by :

- Roofs with slopes particularly on the common parts and services
- Individual "floor-timber" for each room
- Blocks with no more than two floors above the ground floor. It would be ideal not to be higher than the top of the coconuts palms in the site
- Structures made of reinforced concrete and walls made of parpen masonry with cement
- Use of the local materials for the covering and the vertical lines, and also for the general decoration
- Visible carpentry made of local wood
- Large heights ceiling (heat)
- Wood and aluminium carpentries with glazings

Architectural requirements

Avoid the "building" aspect

Give the impression of a strong holiday village

Improve the lakes (glints)

Safeguard the rare essences in the site

Take advantage in maximum the exterior spaces by improving the opened spaces such as large terraces, solariums and exterior bars

Build a botanical park of tropical plants and a vivarium

Create shaded spaces

Safeguard the "places" of the traditional housing, trying to make them parts of the landscape by restoration of urban type operations (cleaning up, sanitary regulations, pedestrian ways, fences, new roads)

This particularly concerns the fishers'villages.

Use the architectonic elements: type of tied rough wood, traditional assembled wood, compacted coconut fiber, multicoloured mats for the ceiling and the walls covering.

Build structures resistant to cyclones which blasts can exceed the speed of 200 km/h.

MARKET PARAMETERS STUDIES

The Market

The Russian Bay is situated in the North West region of the Great Island. In matter of tourism it presents an undeniable assets. It is the image of the seaside tourism and the discovery that characterize Madagascar. Very competitive on an International scale, on the tropical product and the ecotourism theme, it represents an excellent pole of the North West coast of Madagascar which is the "virgin islands coast".

Although it is less exploited despite its exceptional capacities, the region constitutes a future tourist pole relatively near the tourist zone already organized: an airport which could receive the "medium-haul" planes in Nosy Be; little urban centers in Hell Ville and Ambanja; equipped harbours for fishing and boating in Nosy Be Ambanja; an hotel system (220 rooms of international class) in the Nosy Be island.

This zone of priority improvement is located in a region where the coasts extend on 200 km still more or less virgin, varied, ponctuated with beach and creeks, and edged with a seedbed of little islands to be discovered.

It is appropriate for the development of tourism oriented on the sea (beach, water sports, fishing, submarine exploration), as well as for the tourism with theme and ecologic (fauna, flora, circuits and tour in the remarkable site of ANKARANA).

An evaluation study by the UNDP has shown that the reception capacity of the Nosy Be/ Ambanja region in the hotel infrastructure has been estimated at 5000 rooms. The potential needs analysis forsees a complementary demand of 1250 rooms by the year 2000 a significant part will be good for Ampohana/Russian Bay site.

The site will be accessible by plane up to the Nosy Be International Airport (managed in order to receive aircrafts transporting 130 to 200 passengers), then by ship directly from the airport to the implantation site of the hotel complexes (45 minutes by motorized catamarans able to transport 110 passengers).

The proposed project

It is a 4 stars international setting with 200 rooms (expendable) conforming with the new tourist code.

We recommend as for example a first representative project of the seasides hotels typology discovered in order to realize on the development pole (minimum surface of rooms to be respected, T.V, telephone, mini-bar inside a room, a big room for restoration, a snack, a bar, three lounges, a second smaller conference room, a night club, shops, a swimming pool, a travel agency office ...

The clientele

With the proposed tariffs, non-residents (80%) with relatively comfortable budget will be attracted by the setting.

A part of foreigner residents, businessmen, local manifestations will be the clientele resident of the project.

The tariffs

The tariffs for the first year are: (value in January 96)

- Non-residents	:	700	FRF
- Residents	:	400 000	FMG
- Average price for a meal	:	85	FRF
- Nice breakfast	:	25	FRF

The commissions

The commissions will be:

- 10 % on the accomodation for the agencies
- 15 % on the accomodation for the Tour-Operators

PROJECT OF

A COMPLEX HOTEL

OF DISCOVERY TYPE

ANJOHIBE CAVE

(MAHAJANGA)

THE PROJECT ENVIRONMENT

Situation, physical factors

The project location

It is about 80 Km North-East of the city of Mahajanga, near the Mahajamba bay where many sites are set up in the same area.

The Surface

The zone, over 20 ha, covers a range of caves, waterfalls, and natural swimming pool, at Mahafanina as well as on the way to Mahajamba.

The relief and the topography

It is a landscape consisting of hills and hollows with cliffs overlooking the Mahajamba bay. One can go from an Oasis landscape (the swimming pool) to the mangrove swamp by going along calcareous faces and forest galleries

Accessibility, viability and space organization

The accessibility

The access is a 60 Km beaten road from the Antananarivo national road (at 18 Km junction from Mahajanga). The road is not praticable during the rainy season (foundation raft), the site is only accessible on plane (small aircraft) because of the recent runway built by a private operator. An access by ship is conceivable.

The viability, the water ressources

Water is available due to the presence of various streams and a river which falls from a 28 m high wall into the swimming pool. This source of clear water could provide drinking water to the complex.

On the other hand, the presence of a permanent breeze will allow windpump installation, and the sunshine quality all over the year permits the use of the solar system plates.

The site development

The setting-up of the unit is feasible because the region is under populated. Although the old fittings (bungalows, shelter...) are in need of restructuring, they don't disturb the sites.

Tourist ressources and excursion value

The natural environment

The nature is still wild with a luxuriant vegetation. "Woody" forests with rare essences still exist. The fauna is very diversified: lemurs, various birds, crocodiles, boars, ducks, guinea-fowls,...

The exploitable specific products

The sector can provide an accomodation and a restoration unit which stretch on an area of 760 m² excluding the terrace and the outdoor fitting (ranch, landing stage guard shelter,...). It will be a complex of private-housing type covering several bungalows, sanitary facilities, management lodging...

Some covered shelters can also be built at the entrance of the caves for picnics and snacks. Leisure activities areas are added to these (volley, tennis,...)

Implantation - technical and architectural characteristics

The project site is at Mahafanina, beside the caves and the Mahajamba bay in the region of Mahajanga.

It consists of a new private-housing type construction characterized by:

- isolated bungalows arranged according to a mass plan, avoiding geometrical development, with facades exposed to the prevailing wind, large doors and windows (warm climate) that are protected by sheltered terraces (balconies);
- large overhanging vegetal roof with canopies on the roofing;
- easy access buildings;
- wooden masonry and carpentry for the structure;
- floor-covering made of cope cemented or mats;
- a wooden carpentry made of slatted shutter, with lattice work (mosquito net screen) and without glasses;
- high and low ventilation design (slatted shutters, screens...)

The architectural requirements

Use of the local materials (wood and hard)

Avoid any material and arrangement causing excessive accumulation of heat (average T° more than 25°C).

Create a vegetal environment right from the beginning of the constructions for a best solar protection (satrana,...).

Avoid the traditional falafa or satrana hut that depersonalizes the architectural features of the unit.

MARKET PARAMETERS SURVEY

The market

The discovery tourism and the ecotourism are now a big attraction to the international clientele. Since Mahajanga is not yet a large region for the seaside resort, people are interested for its forest reserve or for its caves.

Although, on one hand, the product is specific (reserve, cave, rambling along the Mahajamba bay) and, on the other one, the scientific interest is outstanding, it is really an exceptional attraction. The exploitation of these sites will encourage tourism in this region. This is also one of the rarest touristic zone with potentialities on an international level.

One more reason for promoting the project is that the adepts for touristic circuits are particularly interested in hunting, but before arriving to Ampijoroa for instance, they have to go through Anjohibe. Added to the specific characteristics of the above mentioned product in the beginning, it will interest not only the specialists but also the tourists because of the mass media.

The survey forsees 4500 arrivals for the stays / circuits. A stay of two nights is planned for this kind of circuit:

- first day, visit of the site or the reserve, and even night visit:
- second day, visit of the caves before leaving the next day.

The proposed project

It consists of an accommodation of 15 rooms built next to the given site or a reserve in order to allow the clients to be ready for any visit, rambling or studies they wish to make.

The clientele

The visits of reserves and caves do not attract the middle class Malagasy people yet.

Foreign residents are however very interested by this kind of tourism and the presence of infrastructure will attract them more to these sites.

The real target clientele is still the non-resident tourists.

The tariffs

The tariffs for the first year are (value in January 96).

-Non-residents : 155 FRF

- Residents : 125 000 MGF

- Average price of a meal: 60 FRF

The commissions

The commissions will be:

- 10 % on the accomodation (resident clientele) for Travel Agencies and Tour Operators.
- 15 % on accomodation (non-resident clientele)

PROJECT

COMPLEX HOTEL

LUXUOUS SEASIDE TYPE

AMPOHANA (RUSSIAN BAY)

THE PROJECT ENVIRONMENT

Location, physical factors

The project settlement

In front of Nosy Be, it is located on the North East side of the hills surrounding the Russian Bay. The peak of Ampohana indicates the boundaries in the East.

The surface

The sector has a beach of 1700 meters widthewise, with about 300 meters of depth, thus a surface of 41 ha.

The relief and the topography

There is a beautiful view from the sea: a gentle slope of ground and flows on the implantation site. The hills form the background. The East zone is smooth enough for receiving favorable approbations which makes the seltlement easier.

Accessibility, viability and space organization

The accessibility

The site is only accessible by sea, but the improvement of the roadlink (about 2,5 Km) would connect it with the marina of the Russian Bay. A landing runway (1000 m to 1200 m) could also be improved in the South of the peninsula for a direct access by small carriers.

The viability, the ressource in water

Water is available because of the streams. The fishers in Ampohana are able to get water not too deep from the surface. There is a possibility of arrangement of the different rivers around the site.

The improvements centering

The sector can be divided into three parts:

The west part which is near the hills, permits the settling of an unit.

The central part is occupied by the village and by few precarious installations on the site of a future International level complex.

The East part is free and gives a large space for few complexes and sports equipements.

Tourist ressources and excursion value

The natural environnement

The sector extends on a large panoramic bay. The site and the landscape are very beautiful. The sand is white and fine. The sea permits the approach by ships and the swimming because it is very clear and the beach is protected by a lagoon.

The exploitable specific products

The sector has great possibilities for receiving many units who would come to verify the infrastructure enforcement such as the landing runway, the marine, the roads, the nautical improvements, the different equipments (social, publics,...).

The whole sector could be put at the tourist pole level of international class. The hinterland could also be improved for receiving a golf of 18 holes on a surface of 65 ha and hills slopes could be occupied by the condominiums or by the luxuous residential houses (exceptional high set up site).

Implantation: technical and architectural characteristics

The project site is implanted at the Russian Bay (Cf sector II of the study) on the "great land" and in front of Nosy Be island. There are many implantation sites possible, for instance Ampohana Bay.

It is possible to settle rapidly there new concerns under the compact pavilions form with fully viability (road of circulation between complexes and towards "the marine"), in other words, it consists of many blocks of rooms in order to avoid the high blocks of concrete and is characterized by :

- Roofs with slopes particularly on the common parts and services
- Individual "floor-timber" for each room
- Blocks with no more than two floors above the ground floor. It would be ideal not to be higher than the top of the coconuts palms in the site
- Structures made of reinforced concrete and walls made of parpen masonry with cement
- Use of the local materials for the covering and the vertical lines, and also for the general decoration
- Visible carpentry made of local wood
- Large heights ceiling (heat)
- Wood and aluminium carpentries with glazings

The architectural requirements

Avoid the "building" aspect

Give the impression of a strong holiday village

Improve the lakes (glints)

Safeguard the rare essences in the site

Take advantage in maximum the exterior spaces by improving the opened spaces such as large terraces, solariums and exterior bars

Build a botanical park of tropical plants and a vivarium

Create shaded spaces

Safeguard the "places" of the traditional housing, trying to make them parts of the landscape by restoration of urban type operations (cleaning up, sanitary regulations, pedestrian ways, fences, new roads)

This particularly concerns the fishers'villages.

Use the architectonic elements: type of tied rough wood, traditional assembled wood, compacted coconut fiber, multicoloured mats for the ceiling and the walls covering.

Build structures resistant to cyclones which blasts can exceed the speed of 200 km/h.

MARKET PARAMETERS STUDIES

The Market

The Russian Bay is situated in the North West region of the Great Island. In matter of tourism it presents an undeniable assets. It is the image of the seaside tourism and the discovery that characterize Madagascar. Very competitive on an International scale, on the tropical product and the ecotourism theme, it represents an excellent pole of the North West coast of Madagascar which is the "virgin islands coast".

Although it is less exploited despite its exceptional capacities, the region constitutes a future tourist pole relatively near the tourist zone already organized: an airport which could receive the "medium-haul" planes in Nosy Be; little urban centers in Hell Ville and Ambanja; equipped harbours for fishing and boating in Nosy Be Ambanja; an hotel system (220 rooms of international class) in the Nosy Be island.

This zone of priority improvement is located in a region where the coasts extend on 200 km still more or less virgin, varied, ponctuated with beach and creeks, and edged with a seedbed of little islands to be discovered.

It is appropriate for the development of tourism oriented on the sea (beach, water sports, fishing, submarine exploration), as well as for the tourism with theme and ecologic (fauna, flora, circuits and tour in the remarkable site of ANKARANA).

An evaluation study by the UNDP has shown that the reception capacity of the Nosy Be/ Ambanja region in the hotel infrastructurer has been estimated at 5000 rooms. The potential needs analysis forsees a complementary demand of 1250 rooms by the year 2000 a significant part will be good for Ampohana/Russian Bay site.

The site will be accessible by plane until Nosy Be International Airport (managed in order to receive aircrafts transporting 130 to 200 passengers), then by ship directly from the airport to the implantation site of the hotel complexes (45 minutes by motorized catamarans able to transport 110 passengers).

The proposed project

It is a 4 stars international setting with 60 rooms (expendable to more than 120 or 200 rooms) conforming with the new tourist code.

We recommend as for example a first representative project of the seasides hotels typology discovered in order to realize on the development pole (minimum surface of rooms to be respected, T.V, telephone, mini-bar inside a room, a big room for restoration, a snack, a bar, three lounges, a second smaller conference room, a night club, shops, a swimming pool, a travel agency office ...

The clientele

With the proposed tariffs, non-residents (80%) with relatively comfortable budget will be attracted by the setting.

A part of foreigner residents, businessmen, local manifestations will be the clientele resident of the project.

The tariffs

The tariffs for the first year are: (value in January 96)

- Non-residents	:	700	FRF
- Residents	:	400 000	FMG
- Average price for a meal	:	85	FRF
- Nice breakfast	:	25	FRF

The commissions

Commissions will be:

- 10 % on the accomodation for the agencies
- 15 % on the accomodation for the Tour-Operators

PROJECT

OF ECOLODGE

TYPE COMPLEX HOTEL

AMBRE MOUNTAIN PARK (ANTSIRANANA)

THE PROJECT ENVIRONMENT

Situation, physical factors

The project settlement

The Ambre Mountain is 39km south of Diégo Suarez and its forest reserve reaches at 1 475 m above sea level.

The relief and the topography

It is a landscape bare of mountains up to Joffre-Ville but, becomes very woody about 3 km from the Ambre mountain reserve (National Park). The soil is fertile and well watered.

The climate

The site is very healthy with pure and vivifying air. The mountain climate is fresher and lighter than Diégo Suarez's. The climate would be suitable for the elder people or those in need of a complete rest.

Accessibility and space organization

A good tared road makes the access easy from Diégo Suarez. Tracks crossing the forest reserve are fairly practicable, and accessible during the rainy season.

The site development

The colonial style of building needs to be restored. There is no hotel infrastructure apart from the rooms in the new equipment center which is built inside the National Park.

Tourist ressources and excursion value

The natural environment

Being rich in essences, rare plants, fauna, and its advantage to the ecologic field make the Ambre Mountain National Park first class.

Moreover, although Joffre-Ville has lost its spell of pretty little town (bad roads, deserted houses,...) it offers a panoramic view over the Diégo Suarez bay and the surroundings from East to West.

The workable specific products

With the ecotourism development and the WWF's taking in charge of the Park, the sector would account for the setting-up of an ecolodge in the old building, ventilation center, and ten rooms for fitness and rest at the entry of Joffre-Ville.

Setting-up - Technical and architectural characteristics

The project site is set up in the Ambre Mountain and inside the Park.

It consists of restoring an existing colonial style building with the following features:

- a building;
- a sloping roof with wooden shingles;
- masonry walls (temperate climate);
- a wooden carpentry with glasses (cool);
- floor-timber in front of the rooms;
- wall and ceilings covered made of woods and vegetals
- ground floor (services) and one floor;
- an outside steel stairs.

The architectural requirements

- Integration into the natural site by the maximum use of dull color and local materials.
- Safeguard the environment by avoiding to cut down trees and by replanting shrubbery.
- Avoid any fences and tarred parking, and above all building more houses such as janitor's houses, warehouses,...

MARKET'S PARAMETERS SURVEY

The market

On one hand, the clientele's hobby for discovery tourism and ecotourism, and on the other one, the potentialities offered by the region help for the realization of this project which will be fully integrated into the environment.

The Ambre mountain ecolodge is unique in the region, it will attract wealthy clientele who will have their lunch there during excursion days. The majority of tourists will then do the visit of seaside resort, and the discovery of the fauna and the flora both together.

It is worth mentioning that the agreement for the building of this ecolodge in the Ambre mountain implies the prohibition of bivouacs and unauthorized campings in the zone.

An evaluation study forsees 1740 arrivals for the stays / circuits, 15 % of which for the Ecolodge.

The average length of the stay will be 4 nights.

The proposed project

It consists of restoring an establishment of 10 rooms built next to a site, or a reserve to allow clients to be ready for visits, ramblings or studies that they wish to make.

The clientele

The resident clientele will be mostly foreign residents, researchers and students.

The region of Antsiranana should be one of the most important destination for ecotourism, fauna and flora; the real target clientele is the non-resident tourists.

The tariffs

The tariff for the first year are: (value in January 96)

-	Non-residents	:	80	FRF
-	Residents	:	90 00	00 MGF
-	Average price for a meal	:	45 00	00 MGF
-	Nice breakfast	:	20 00	00 MGF

The commissions

The commissions will be:

- a) for The Agencies and Tour-Operators
 - 10% on the accommodation for the residents
 - 15% on the accommodation for the non-residents
- b) for The Hotels of the region
 - 5% on the accommodation for the residents
 - 10% on the accommodation for the non-residents

SENSIVITY TEST

PROJECT INDICATORS (1000 FRF)

Investment amount	1 876
Amongst fixed assets	1 775
Working capital	101
Turnover during a year of cruise	1 259
IRR with residual value	24%
Rentability Rate of the net fund	17%

1. Turnover variation in %				
Turnover variation	6%	-15%	-20%	-40%
IRR with residual value	28%	15%	12%	0%
RR of the net fund	45%	-3%	-6%	-15%

2. Investment Variation in %						
Investment variation	-35%	100%	160%			
IRR with residual value	28%	15%	12%			
RR of the net fund	25%	7%	-6%			

3. Other receipts variation			
Occupation rate variation	10%	-25%	-30%
IRR with residual value	28%	15%	12%
RR of the net fund	25%	-4%	-9%

4. Occupation rate variation in %			
Occupation rate variation	50%	-100%	-150%
IRR with residual value	28%	15%	12%
RR of the net fund	26%	1%	-3%

5. Room prices variation in % (UP)			
Room prices variation (up)	90%	-130%	-180%
IRR with residual value	28%	15%	12%
RR of the net fund	25%	-2%	-5%

6. Interest rate variation in % (I)			
Interest rate	28,00%	20,00%	15,00%	12,00%
IRR with residual value	24%	26%	27%	28%
RR of the net fund	17%	30%	38%	43%
