Published in 1997, Vienna, Austria

The Directory of Industrial and Technological Information Sources in Ukraine is the product of a joint initiative of the Ukrainian Institute of Scientific-Technical and Economic Information, UkrINTEI, Kiev, Ukraine, and of the UNIDO/INTIB (Information and Networking for Technology, Investment and Business) programme of UNIDO.

As the other national and regional directories prepared under the UNIDO/INTIB programme, this directory should contribute to the overall objective of the programme, which is to improve the flow of information within each country and among the countries of the world.

The Directory contains three chapters:

The Specialized Information Sources chapter contains profiles of providers of information services listed alphabetically by name of organization. The services provided may range from lists of technologies available to descriptions of manufactured products or training opportunities for one or more sectors of industry, or a combination of any of these services. Instructions on how to interpret the profiles are provided at the beginning of the chapter.

To ease the search for an organization by sector or activity, reference lists are provided under the "Sectoral Reference List" and "Activities Reference List" chapters.

It is hoped that this Directory will help make Ukrainian technologies and information resources better known to other countries and will thus contribute to the efforts of INTIB in accelerating the flow of information in the global community.

Today, the transition from centrally-planned to market economy calls for the development of a strong private sector. Indeed industrial, economic and social development in a market economy hinges upon the capacity of the private sector to strengthen or to acquire a competitive position by means of a strategic combination of products, processes and markets.

Since the election of Leonid Kuchma as President of Ukraine in 1994 and especially with the adoption of a new constitution in June 1996, emphasis in Ukraine has been placed on the privatization and restructuring of the energy sector, the introduction of a new currency, strengthening the national market, opening to international markets and, generally, on the overall structural re-organization of the country. This involves the call for participation from foreign investors. Modern channels of communication are a strategic means to accelerating industrial cooperation with foreign partners in order to meet the intense competition on the world market. UNIDO and Ukraine have been actively cooperating in this direction.

The joint issue of the Directory of Industrial and Technological Information Sources in Ukraine represents a further intensification of the collaboration between Ukraine and UNIDO. It will contribute to making Ukrainian information sources on technology, investment and business opportunities better known to other countries. It will also facilitate the flow of information between potential partners in the world community, which is the ultimate aim of publications of this type.

I therefore warmly welcome the joint initiative for editing this directory as a useful instrument to make technology "Made in Ukraine" more readily accessible to other countries.

Gennadi Y. Udovenko
Minister for Foreign Affairs of Ukraine

For several years, UNIDO has been providing a technological information service to both developing and developed countries mainly through its INTIB services (formerly Industrial and Technological Information Bank), from its Vienna Headquarters. Given the ever increasing demand for information, it was decided to decentralize the operation and encourage the dissemination of knowledge and know-how through a network of specialized information sources.

This network has been built up over the last four years and the INTIB programme (now Information and Networking for Technology, Investment and Business) has started publishing a series of national and regional directories in order to locate such information sources, as well as investment and industrial opportunities in various countries of the world. The present directory is part of the series and it should permit the rapid identification of potential Ukrainian partners for the world community. The production of this joint directory will strengthen the responsive capacity of the UNIDO network and provide entrepreneurs with better access to technologies and know-how available in other countries.

I, thus, welcome the close collaboration between the Ukrainian Government and UNIDO and the contribution they have made to the global sharing of industrial and technological information that serves the cause of industrial development across the globe.

A handwritten signature in dark ink, appearing to read 'M. de M. y C.' with a stylized flourish at the end.

Mauricio de Maria y Campos,
Director-General, UNIDO

UNIDO

UNIDO is the specialized agency of the United Nations dedicated to bringing a better life through industrial development to the people who live in developing countries and countries in transition to market economies. The aim of UNIDO's services is to help these countries overcome their social and economic difficulties and achieve a greater stake in the global market.

Through its industrial expertise, the Organization helps lay the foundations for long-term, sustainable development. As a catalyst for change, it provides the kind of industrial services essential for clients to generate their own economic wealth and develop national capabilities.

With a broad membership of 169 nations, UNIDO is a unique forum for global debate on industrial development. As an honest broker, it builds on the complementary interests of its clients to develop international industrial partnerships.

More information is available from the Internet address: <http://www.unido.org>.

INTIB

As early as December 1975, the General Assembly of the United Nations had affirmed the "need to enable developing countries to have access to specific information on advanced and other technologies requested by them, as well as on the new uses of existing technologies, new developments, possibilities of adapting them to local needs and to select technologies which meet their requirements". INTIB (formerly Industrial and Technological Information Bank) was set up in 1977 as a pilot project through a decision of the Industrial Development Board to meet these needs. Since then INTIB has facilitated direct or indirect access to information through its own databases and through a variety of services and products.

To reflect recent changes in its activities and services and to respond to rapid advances in information technology and the internet, INTIB was redefined in 1996 as the "Information and Networking for Technology, Investment and Business" programme. Its technical assistance programme now concentrates on providing support for the development of "Integrated National Information Networks" in developing countries. Its objective is to organize a working relationship among various national information institutions, agencies and organizations and to facilitate the flow of information to, from and within a country.

IRS

One of the latest tools added to INTIB's services is the International Referral System (IRS). IRS is an information professional referral service that serves a wide range of information needs: from document delivery to online research; from market surveys to industrial/technical expertise, and business opportunities.

The service operates by matching our clients, mainly entrepreneurs from developing countries, who have industry related questions with members of the service, professionals or institutions throughout the world, who can provide state-of-the-art, tailor-made answers to their questions. In order to use this service, our clients are requested to complete a questionnaire, which assists in the formulation of the query so that the best matches will be found among the members of the service. All the members listed from developed and developing countries, have substantial industrial development experience and the best possible qualifications.

IRS thus offers our clients a means to identify the best world-wide industrial information provider for a specific question, at conditions affordable by developing country entrepreneurs. IRS offers our members a valuable new source of business with developing countries. Its flexible and convenient operation allows those members to retain their independence while marketing their services to clients around the world.

The members participating in the IRS are divided into two groups: Specialized Information Sources (SIS) and Investment Facilitators (IF). SIS consist of information professionals whose activities focus on providing information products to industrialists in order to solve their daily production problems or to develop new production facilities. IFs are mainly institutions promoting services related to the financing (loans, etc.) or cooperation (joint-venture, licensing, etc.) aspects of industrial activities.

Prospective members either as Specialized Information Sources (SIS) or Investment Facilitators (IF), should contact UNIDO/INTIB.

CHAPTER I

SPECIALIZED INFORMATION SOURCES

The specialized information sources are listed alphabetically by name of organization. In order to search by sector of industry, see the sectoral reference list on page 39. To search by activity, see the activities reference list on page 45.
