The description and classification of countries and territories in this publication and the arrangement of the material do not imply the expression of any opinion whatsoever on the part of the Secretariat of the United Nations Industrial Development Organization concerning the legal status of any country, territory, city or area, or of its authorities, or concerning the delimitation of its frontiers or boundaries, or regarding its economic system or degree of development. The designation "country or area" covers countries, territories, cities and areas. The designation "region, country or area" extends the preceding one by including groupings of entities designated as "country or area". Designations such as "industrialized" and "developing" countries and "newly industrialized countries" are intended for statistical convenience and do not necessarily express a judgement about the stage reached by a particular country or area in the development process.

## Explanatory notes

Unless otherwise indicated, "manufacturing" includes the industry groups listed under major division 3 in the *International Standard Industrial Classification of All Economic Activities* [Statistical Papers, Series M, No.4/Rev.2 (United Nations publication, Sales No. E.68.XVII.8)]. It should be noted, however, that several countries have made a switchover from their national industrial classification schemes that were based on, or related to, Revision 2 of the International Standard Industrial Classification of All Economic Activities (ISIC) to those based on, or related to, Revision 3 of ISIC [Statistical Papers, Series M, No.4/Rev.3 (United Nations publication, Sales No. E.90.XVII.II)]. In these instances, "manufacturing" refers to table category D in that classification.

ISIC code numbers are accompanied by a descriptive title (for example in the case of Revision 2 of ISIC, ISIC 323: "Manufacture of leather and products of leather, leather substitutes and fur, except footwear and wearing apparel"). For considerations of space, however, the description is sometimes shortened (that is, ISIC 323 may be described simply as "Leather and fur products"). For both Revisions 2 and 3 of ISIC, all 3- and 4-digit codes and their corresponding descriptive titles are listed in appendix II to the introduction.

In the presentation of several tables individual countries and areas are listed alphabetically, whenever appropriate, within two successive categories: industrialized countries and developing countries. Data relating to selected groups of countries are presented in part I. In addition to regional groupings, developing countries have been further classified into three income categories: developing countries with low income (less than \$600 per capita gross domestic product in 1978 at current prices), those with middle income (\$600-\$1,320) and those with high income (more than \$1,320). This group has also been arranged in four development categories: newly industrialized countries (NICs), second-generation NICs, least developed countries and other developing countries. NICs are defined as major exporters of manufactures among developing countries in the mid-1970s, with a share of manufactures in total merchandise exports exceeding 20 per cent. Second-generation NICs are developing countries with a high average annual growth rate (over 15 per cent during the period 1970-1985) and having manufactured exports exceeding \$500 million in value in 1985. Countries and areas included in the groups are listed in appendix I to the introduction. Because of a lack of data, some countries could not be included in their respective groups in some tables.

This publication contains some references to countries that no longer exist. The statistical indicators, however, generally cover most of the period when they *did* exist. On 3 October 1990, through accession of the German Democratic Republic to the Federal Republic of Germany, the two German States united to form one sovereign State: "Germany". The Union of Soviet Socialist Republics ceased to exist as of 24 December 1991. Data provided for Yugoslavia prior to 1 January 1992 refer to the Socialist Federal Republic of Yugoslavia, which was composed of six republics. Data provided for Yugoslavia after that date refer to the Federal Republic of Yugoslavia, which is composed of two republics (Serbia and Montenegro). Czechoslovakia ceased to exist on 31 December 1992. The successor States are the Czech Republic and Slovakia.

Hong Kong became the Hong Kong Special Administrative Region (SAR) of China on 1 July 1997. In the present publication, unless otherwise stated, data for China do not include data for Hong Kong SAR and for Taiwan Province of China, which are presented separately under China (Hong Kong SAR) and China (Taiwan Province).

In section 1.1, data relating to Ethiopia include the province of Eritrea, which since May 1993 has been an independent country having the same name.

Zaire was renamed the Democratic Republic of the Congo on 17 May 1997. Data for that country are presented under its new name.

Regardless of the year/period referred to, the country group European Union (EU) is related to the group consisting of the 15 countries shown under that country group in appendix I to the introduction.

In part I, references to dollars (\$) are to United States dollars. National currencies have been converted to dollar equivalents by using period average exchange rates as published in *International Financial Statistics* (International Monetary Fund publication) and other sources.

Data converted to dollars by using current exchange rates are liable to be strongly influenced by fluctuations in exchange rates. Annual variations of data converted in that manner may not reflect movements in the national data.

Unless otherwise noted, average annual growth rates are calculated from the data available for each year of a given period (for example, 1980–1990), using a semi-log regression over time. Growth rates are expressed in percentages.

Periods set off by a hyphen (for instance, 1980–1990) include the beginning and end years.

Apparent arithmetical discrepancies, such as percentages that do not add up to precise totals, result from the rounding of basic data or figures known to different degrees of precision.

Three dots (...) indicate that data are not available or are not separately reported.

A dash ( - ) indicates that an amount is nil or negligible.

The letter "x" designates the item applicable to a country when several options exist.

To avoid ambiguity, the letters "l", "o" and "O" are not used to designate footnotes.

***Industrial Statistics Branch***  
***DATA AVAILABLE IN MACHINE READABLE FORM***

UNIDO maintains databases on industrial statistics, which are available on magnetic tape for mainframes or on microcomputer diskettes. New versions are published annually.

---

**UNIDO Industrial  
Statistics Database,  
3-Digit Level of ISIC Code**

- Time series for more than 170 countries/areas compiled on nine items, including number of establishments, number of persons engaged, number of employees, number of female employees, wages and salaries paid to employees, output, value added, gross fixed capital formation and production indices.
- Data reported by country for 28 industrial branches.
- Time series on most items starting in 1963.

---

**UNIDO Industrial  
Statistics Database,  
4-Digit Level of ISIC Code**

- Time series for more than 100 countries/areas compiled on eight items, including number of establishments, number of persons engaged, number of employees, number of female employees, wages and salaries paid to employees, output, value added and gross fixed capital formation.
- Data reported by country for up to 81 industries.
- Time series starting in 1981.

---

**UNIDO Industrial  
Demand-Supply  
Balance Database**

- Time series (starting in 1981) for about 70 countries on output, imports, exports and apparent consumption at the 4-digit level of ISIC code (all in current US dollars).
- Data reported by country for up to 81 industries.

## INTRODUCTION

This is the fourth issue of UNIDO's annual publication, the *International Yearbook of Industrial Statistics*. The *Yearbook* succeeded the *Handbook of Industrial Statistics* which was published biennially by UNIDO up to 1992, and, at the same time, replaced the United Nations' *Industrial Statistics Yearbook*, volume I (General Industrial Statistics), which was discontinued after its 1991 edition published in 1993. These changes were in accordance with the recommendations of the United Nations Statistical Commission at its twenty-seventh session, namely that UNIDO, in collaboration with the Organisation for Economic Co-operation and Development (OECD), assumes responsibility for the collection and dissemination of world-wide general industrial statistics, effective 1994. The present *Yearbook* pertains to the manufacturing sector only.

The main purpose of the *Yearbook* is to provide statistical indicators to facilitate international comparisons relating to the manufacturing sector. The data presented were compiled bearing in mind the requirements of international comparability and the standards for this work promulgated by the United Nations. Concepts and definitions are drawn from the *International Recommendations for Industrial Statistics* [Statistical Papers, Series M, No.48/Rev.1 (United Nations publication, Sales No.E.83.XVII.8)] and the classification by industry follows Revision 2 or, for several countries, Revision 3 of ISIC.

The present *Yearbook* consists of two parts. Part I deals with the manufacturing sector as a whole (section 1.1) and with its branches (section 1.2). Statistical indicators are presented in terms of percentage distributions, cross-country averages, ratios and real growth rates that facilitate international comparison among selected country groups and/or countries. Data for manufacturing branches are arranged according to Revision 2 of ISIC at the three-digit (or major-group) level. Part II consists of a series of country/area-specific tables showing detailed data on selected basic statistics that were reported by national statistical offices. For most of the countries, data were presented in accordance with Revision 2 of ISIC. Several countries, however, have made a switchover from their national industrial classifications compatible with Revision 2 to those compatible with Revision 3 of ISIC. Consequently, data for those countries are presented in accordance with Revision 3 of ISIC.

### Sources and methods

In section 1.1 of part I, manufacturing value added (MVA) was estimated in accordance with the national accounting concept, which represents the net contribution of the manufacturing sector to gross domestic product (GDP). The data on MVA and GDP were obtained from various national and international sources including OECD, the World Bank, the Statistical Division of the United Nations Secretariat (UNSD) and the International Monetary Fund. These sources were supplemented with estimates generated by UNIDO. With respect to population, the information draws on the 1996 revision of the data compiled by the Population Division of the United Nations Secretariat.

The information in section 1.2 is drawn from the UNIDO General Industrial Statistics Database. A large portion of the data for the years up to 1992 maintained in the database are those communicated to the United Nations by official national sources. The data for 1993 onwards, as well as additions and revisions of data referring to previous years, were reported by national statistical offices through the UNIDO General Industrial Statistics Questionnaire. With regard to figures for recent years, those referring to the member countries of OECD were compiled by that organization. New information is solicited through a questionnaire issued jointly by the two organizations.

To facilitate the comparability of the data over time and across countries, UNIDO has supplemented originally reported data with information obtained from various other sources. The latter include: industrial censuses, statistics supplied by national and international organizations, unpublished data collected in the field by UNIDO as well as estimates made by the UNIDO secretariat.\*

All indicators related to value data were derived at constant 1990 prices, except for several indicators presented in tables 1.1, 1.2, 1.5 and 1.12.

The indicators presented in tables 1.6 to 1.10 of section 1.2 were derived from estimates of value added at constant 1990 prices. For each country and industrial branch, these value-added estimates

\* UNIDO's procedures for estimation are described in "*UNIDO Industrial Statistics Database — Methodological Notes*" (IRD/R.11).

were generated by applying production indexes to the 1990 value-added base weights, which in turn were generated by UNIDO from various national and international sources.

Users should be aware that, in part I, owing to a lack of relevant data, China is normally not included in world totals. The only exception is table 1.2, where the share of China in world MVA has been estimated for recent years on the basis of data provided by UNSD and national sources.

Except for index numbers of industrial production, the information for the countries and areas other than the OECD member countries presented in part II were compiled from (i) the 1995 edition of the UNIDO General Industrial Statistics Questionnaire completed by national statistical offices and (ii) relevant publications issued by national statistical offices. Information referring to OECD member countries is based on data compiled by OECD via questionnaire and incorporated in OECD's Information System on Industrial Statistics as well as in the UNIDO database. With respect to production indexes, data were supplied by UNSD which compiles these data regularly from national sources through the quarterly United Nations Index of Industrial Production Questionnaire.

In section 1.2 of part I and in part II, the measures generally used are census output and census value added. Thus, the costs of non-industrial services are included in value added, whereas the receipts for these services are excluded from output. For a quick reference, appendix III to this introduction provides notes on certain aspects of the data used, and it is recommended that the reader consult them when using the *Yearbook*. A detailed version appears in the individual country notes in part II, which also covers deviations from the standards applied. In general, these notes are also applicable to the estimates that supplement the officially reported data.

The co-operation of national statistical offices, OECD and UNSD in the provision of the information which is the basis of the current publication is gratefully acknowledged.

## PART I. SUMMARY TABLES

### Section 1.1: The manufacturing sector

Section 1.1 comprises tables 1.1 to 1.5. Table 1.1 shows the distribution of world MVA (excluding China) for various regions and groups of countries at constant 1990 prices as well as at current prices.

To maintain comparability over time, composition of each group of countries was kept the same throughout the period. In this connection, EU refers to the following 15 countries: Austria, Belgium, Denmark, Finland, France, Germany, Greece, Ireland, Italy, Luxembourg, Netherlands, Portugal, Spain, Sweden and United Kingdom of Great Britain and Northern Ireland. However, due to data limitations the eastern part of Germany is excluded up to 1990.

Table 1.2 shows the share of China in world MVA at constant 1990 prices as well as at current prices. The reader should be aware that due to variation in official exchange rates the world distribution may change considerably depending on the choice of the base year.

Table 1.3 shows the shares of selected groups of developing countries in MVA and in population of all developing countries.

Table 1.4 shows real growth rates and index numbers (1990=100) of total and per-capita MVA as well as values of per-capita MVA for the latest year for individual countries and areas and for selected country groups. Data referring to country groups were based on cross-country aggregates of MVA in constant 1990 US dollars.

Table 1.5 shows the percentage shares of MVA in GDP estimated both at constant 1990 prices and at current prices. In a number of cases, consolidation of data at constant and current prices, often originating from different sources, required adjustments to the entire time series. The data are presented by individual countries and areas as well as by selected country groups. GDP has been calculated as the sum of value added of individual sectors. Data given for individual sectors may sum up to an amount different from data given for total GDP. The sources of this discrepancy are specific to each country and are rarely documented. With respect to the selected country groups, common country samples were taken for both indicators and for all reference years. Furthermore, the shares of MVA in GDP are aggregated at the level of the grouping by dividing the sum of MVA by the sum of GDP.

### Section 1.2: The manufacturing branches

Section 1.2 comprises tables 1.6 to 1.12. It focuses on the branches of the manufacturing sector. Branches are defined as major ISIC (Revision 2) groups, reported in accordance with a three-digit code. The ISIC definition of manufacturing comprises 28 major groups or branches.

Table 1.6 shows the world distribution of the respective value added of selected 24 branches among selected country groups. Four branches are omitted from the table because the data are too scanty to ensure comparability between years. To derive world totals, particularly for the latest years, a number of estimates at the country level, especially for many developing countries, were generated.

Table 1.7 shows the shares of developing regions and the least developed countries in the value added of all developing countries in selected branches. Due to lack of sufficient data, estimates at the country level had to be generated to enable regional aggregation. Instead of 1995, the year 1994 has been chosen as the latest year. Nevertheless, a number of branches had to be excluded from the presentation due to data limitations.

Table 1.8 shows the world's leading producers in various industrial branches as well as the leading developing countries and areas in terms of value added. World totals exclude the countries of eastern Europe and of the former USSR. As in the case of table 1.6, data for 1995 include many estimates generated for individual countries.

Table 1.9 shows the shares of individual branches in total MVA by country grouping. In the case of developing countries the data coverage is limited but still representative; it includes 70 countries and areas which in 1990 accounted for more than 90 per cent of the MVA of all developing countries.

Table 1.10 shows real growth rates of value added of individual branches, calculated for selected country groups. The reference periods are 1980-1990 and 1990-1995. However, due to lack of comparable data, the second period is 1990-1994 or 1990-1993 in several cases.

Table 1.11 presents the share of female employees in total employment in individual branches. For some countries, employment refers to number of persons engaged instead of number of employees (see appendix III of the present introduction). Only a limited number of countries and areas have reported data on female employment at the branch level.

Table 1.12 shows, for individual countries and areas, basic indicators that are characteristic of the manufacturing branches. Average annual rates of growth refer to compound rates based on data for the initial and terminal years indicated. For the calculations of real growth rates of value added per employee and those of wage rates, value added

estimates at constant 1990 prices were derived using production indexes while wages at constant 1990 prices were derived by deflating wages at current prices with consumer price indexes. Costs of input materials and utilities are calculated as output minus value added. Costs of labour refer to wages and salaries of employees only. Operating surplus is calculated as value added minus wages and salaries paid to employees.

Information concerning the following branches is excluded from table 1.12: beverages (ISIC 313); tobacco (ISIC 314); petroleum refineries (ISIC 353); and petroleum and coal products (ISIC 354). Production indicators (output, value added) for those four branches are highly sensitive to the valuation method (which may or may not include indirect taxes and subsidies). Because that method is not applied uniformly among countries, international comparison of the branches concerned is not advisable. Two more branches were excluded due to lack of sufficient data, i.e., professional and scientific equipment (ISIC 385) and other manufactures (ISIC 390).

## PART II. COUNTRY TABLES

Part II comprises country/area-specific tables presenting the following selected industrial statistics: number of establishments, number of employees (or, if not reported, number of persons engaged), wages and salaries paid to employees, output, value added, gross fixed capital formation and index numbers of industrial production. All value data are presented in current national currencies. The data on these items (except gross fixed capital formation and index numbers of industrial production) relate to the last four years for which data were reported. Gross fixed capital formation refers to the last two years for which data were reported. Index numbers of industrial production refer to the period 1984-1995. Production indexes for total manufacturing were derived as weighted averages across branches employing 1990 value-added base weights which were estimated by UNIDO.

### Industrial classification

The classification of industrial activity set out in the tables (excluding that for production indexes) follows either Revision 2 or Revision 3 of ISIC depending on the individual country's data reporting scheme. In either case, the employed levels of detail are the three- and four-digit levels of ISIC, or the three-digit level if no data on four-digit groups were reported. With regard to production indexes,

data are arranged in accordance with the 3-digit level of Revision 2 of ISIC. Where information was not provided in this form, the estimates are shown in the most applicable category. Aggregates for total manufacturing are included.

It should be noted that in several cases a figure presented for a 3-digit group does not agree with the sum of data given for the corresponding 4-digit categories. As far as possible, UNIDO resolved these discrepancies with the help of available supplementary information.

#### **Reference unit**

For most countries and areas represented, the data shown relate to the activity of "establishments" in the specified industries rather than any other type of industrial unit. In a few cases, however, the concepts of "kind-of-activity unit", "local unit" or "enterprise" are found. An "establishment" is ideally a unit which engages, under a single ownership or control, in one, or predominantly one, kind of activity at a single location; for example, workshop or factory. A "kind-of-activity unit" differs from the establishment in that there is no restriction with respect to the geographical area in which a given kind of activity is carried out by a single legal entity. A "local unit", on the other hand, comprises all activities carried out under a single ownership or control at a single location and differs from the establishment-type of unit in that there is no restriction on the range of these activities.

An "enterprise" is a legal entity possessing the right to conduct business in its own name; for example, to enter into contracts, own property, incur liability for debts, and establish bank accounts. In the countries of eastern Europe and of the former USSR, the reference unit is often the enterprise and this is usually defined as the unit having a single administration with the right to conclude contracts, an independent production plan, an independent current bank account and a self-contained system of bookkeeping with independent balance sheets and profit-and-loss statements. Specific information on the character of the units covered in the tables for each country is set out in the corresponding country note.

#### **Reference period**

The statistics in the tables relate, in general, to the calendar year. It should be noted, however, that in many cases where the basic reference period of the industrial inquiry is the calendar year, returns covering proximate fiscal years may be accepted for reporting purposes and the data for these years

incorporated in the calendar-year aggregates without adjustment. In a few countries, fiscal years normally used for public accounting purposes have been adopted as the basic reference periods. In the case of fiscal-year coverage, the year indicated in the tables refers to the calendar year in which the major part of the fiscal year falls. In the case of fiscal years from 1 July to 30 June, the year referred to is normally the one in which the fiscal year ends.

#### **Concepts and definitions of the items**

The United Nations standards which have been applied in preparing the tables are set out below. All values are in national currency units and are at current prices unless otherwise indicated. For countries other than the OECD member countries, deviations from these concepts and definitions are described in the respective country notes. The country notes referring to OECD member countries are based on information presented in annex I ("Sources and Definitions") of OECD's annual publication "*Industrial Structure Statistics*".

##### **(1) Number of persons engaged and number of employees**

The number of persons engaged is defined as the total number of persons who worked in or for the establishment during the reference year. However, homeworkers are excluded. The concept covers working proprietors, active business partners and unpaid family workers as well as employees. The figures reported refer normally to the average number of persons engaged during the reference year, obtained as the sum of the "average number of employees" during the year and the total number of other persons engaged measured for a single period of the year. The category "employees" is intended to include all persons engaged other than working proprietors, active business partners and unpaid family workers. In this publication, preference has been given, whenever possible, to employees over persons engaged.

##### **(2) Wages and salaries**

Estimates of wages and salaries include all payments in cash or in kind made to "employees" during the reference year in relation to work done for the establishment. Payments include: (a) direct wages and salaries; (b) remuneration for time not worked; (c) bonuses and gratuities; (d) housing allowances and family allowances paid directly by the employer; and (e) payments in kind.

Compensation of employees is equivalent to wages and salaries plus employers' contributions on behalf of their employees paid to social security, pension and insurance schemes, as well as the benefits

received by employees under these schemes and severance and termination pay.

### **(3) Output**

The measure of output normally used in the tables is the census concept which covers only activities of an industrial nature. The value of census output in the case of estimates compiled on a production basis comprises: (a) the value of all products of the establishment; (b) the net change between the beginning and the end of the reference period in the value of work in progress and stocks of goods to be shipped in the same condition as received; (c) the value of industrial work done or industrial services rendered to others; (d) the value of goods shipped in the same condition as received less the amount paid for these goods; and (e) the value of fixed assets produced during the period by the unit for its own use. In the case of estimates compiled on a shipment basis, the net change in the value of stocks of finished goods between the beginning and the end of the reference period is also included.

Gross output is equivalent to census output plus the revenue from activities of a non-industrial nature. Valuation may be in factor values, excluding all indirect taxes falling on production and including all current subsidies received in support of production activity, or in producers' prices, including all indirect taxes and excluding all subsidies.

### **(4) Value added**

The measure of value added normally used in the tables is the census concept, which is defined as the value of census output less the value of census input. Items covered in the latter include: (a) value of materials and supplies for production (including cost of all fuel and purchased electricity); and (b) cost of industrial services received (mainly payments for contract and commission work and repair and maintenance work). If input estimates are compiled on a "received" rather than on a "consumed" basis, the result is adjusted for the net change between the beginning and the end of the period in the value of stocks of materials, fuel and other supplies.

Total value added is the national accounting concept. It is ideally represented by the contribution of the establishments in each branch of activity to the gross domestic product. For the measure of total value added, the cost of non-industrial services is deducted and the receipts for non-industrial services are added to census value added. The estimates, whether in terms of census value added or total value added, are gross of depreciation and other provisions for capital consumption, unless otherwise stated. The

valuation may be in factor costs or in producers' prices, depending on the treatment of indirect taxes and subsidies.

### **(5) Gross fixed capital formation**

Estimates refer to the value of purchases and own-account construction of fixed assets during the reference year less the value of corresponding sales. The fixed assets covered are those (whether new or used) with a productive life of one year or more. These assets, which are intended for the use of the establishment, include fixed assets made by the establishment's own labour force for its own use. Major additions, alterations and improvements to existing assets which extend their normal economic life or raise their productivity are also included.

New fixed assets include all those that have not been previously used in the country. Thus, newly imported fixed assets are considered new whether or not used before they were imported. Used fixed assets include all those that have been previously used within the country. Transactions in fixed assets include: (a) land; (b) buildings, other construction and land improvements; (c) transport equipment; and (d) machinery and other equipment.

Assets acquired from others are valued at purchasers' prices, which cover all costs directly connected with the acquisition and installation of the items for use. In principle, assets produced on own account are also valued in this manner. However, it may frequently be necessary to value such own-account production at explicit cost, including any imputations that may be required in respect of the employed own-account labour. Assets produced by one establishment of a multi-establishment enterprise for the use of another establishment of the same enterprise should be valued by the receiving establishment as though purchased from outside the enterprise. Sales of assets should be valued at the actual amounts realized rather than at book values.

### **(6) Index numbers of industrial production**

The indexes in the tables are compiled from national indexes which are calculated by use of the Laspeyres formula. The comparison base year is 1990. However, if different base years are used in any countries, the national indexes are converted to the comparison base year.

## AUSTRALIA

**Supplier of information:**

Australian Bureau of Statistics, Canberra.

The index numbers of industrial production are compiled by the Institute of Applied Economic and Social Research, University of Melbourne.

Industrial statistics for the OECD countries are compiled by the OECD secretariat, which supplies them to UNIDO.

**Basic source of data:**

Annual manufacturing survey.

**Major deviations from ISIC (Revision 3):**

Data have been compiled on the basis of the Australian and New Zealand Standard Industrial Classification (ANZSIC). This classification is not fully compatible to the ISIC (Rev. 3), especially at a high level of disaggregation.

**Reference period (if not calendar year):**

Fiscal year ending 30 June of the year indicated.

**Scope:**

All establishments.

The index numbers of industrial production cover, in principle, establishments with 4 or more persons engaged or those using power equipment.

**Method of enumeration:**

Not reported.

**Adjusted for non-response:**

Not reported.

**Concepts and definitions of variables:**

Number of establishments is the number on 30 June. The establishment is the smallest accounting unit of a business within an Australian state or territory, controlling its productive activities and maintaining a specific range of detailed data enabling value added to be calculated. In general, an establishment covers all operations at a physical location but may consist of a group of locations provided they are within the same state or territory. The majority of establishments operate at one location only.

Number of persons engaged refers to the last pay period in June of each year.

Wages and salaries is gross wages and salaries of all employees.

Output is turnover measured as sales of goods (exclusive of excise and sales tax), whether produced by the establishment or not, plus transfers out of goods to other establishments of the same business, plus bounties and subsidies on production, plus all other operating revenue from outside the business (such as commission revenue, repair and service revenue and rent, leasing and hiring revenue), plus capital work done for own use or for rental or for lease.

Value added is turnover plus the net increase in stocks, less purchases, transfers and selected expenses.

Gross fixed capital formation is net capital expenditure on tangible assets. Tangible assets include land, buildings and structures, plus plant, machinery and equipment (including motor vehicles). Capital expenditure includes all costs which have been capitalised, including interest, legal fees, real estate transfer costs, finance leases and assets acquired under finance leases. Also included are progress payments made to contractors for capital works done by them.

**Basic source of data:**

Annual industrial survey.

**Major deviations from ISIC (Revision 2):**

Food products (ISIC 311/2) does not include sugar manufacturing.

**Reference period (if not calendar year):**

The reference period is the calendar year, but data reported for the financial year are accepted and incorporated in the calendar year in which the major part of the financial year falls.

**Scope:**

All establishments.

**Method of enumeration:**

Questionnaires are distributed by mail with follow-up site visits as required.

**Adjusted for non-response:**

No.

**Concepts and definitions of variables:**

Number of employees is the average of the quarterly numbers.

Figures for wages and salaries exceed value added in several industries. This reflects the presence of significant subsidies received by industrial establishments.

Gross fixed capital formation refers to the acquisition less sales of fixed assets during the year.

**Related national publications:**

Statistical Bulletin; Survey of Industrial Establishments (occasional), both published by the Barbados Statistical Service, Bridgetown.

## BELGIUM

**Supplier of information:**

Office national de sécurité sociale (ONSS), Ministère de l'emploi et du travail, Brussels.  
Industrial statistics for the OECD countries are compiled by the OECD secretariat, which supplies them to UNIDO. The notes appearing here are based on information in the OECD publication *Industrial Structure Statistics* (annual), OECD, Paris.

**Basic source of data:**

Not reported.

**Major deviations from ISIC (Revision 2):**

All data have been converted from the national classification to ISIC (Rev. 2). Prior to 1993, ONSS classified data according to NACE70. Since 1993, ONSS classified data according to NACE Revision 1. For this reason, data through 1992 are not strictly comparable with those for later years.

**Reference period (if not calendar year):****Scope:**

Not reported.

**Method of enumeration:**

Not reported.

**Adjusted for non-response:**

Not reported.

**Concepts and definitions of variables:**

Wages and salaries does not include employers' social security contributions.

**Supplier of information:**

Fundação Instituto Brasileiro de Geografia e Estatística (IBGE), Rio de Janeiro.

**Basic source of data:**

Pesquisa Industrial Anual.

**Major deviations from ISIC (Revision 2):**

The data are based on the national classification scheme, which is not strictly comparable with the ISIC, but are arranged to represent ISIC (Rev. 2) as far as details permit.

**Reference period (if not calendar year):****Scope:**

The survey covers all registered establishments.

**Method of enumeration:**

Not reported.

**Adjusted for non-response:**

Not reported.

**Concepts and definitions of variables:**

Number of employees refers to persons actively engaged as of 31 December of the year indicated.

Output and value added exclude discount and cancelled sales. The valuation of output and value added is approximate to factor values.

| <p><b>Supplier of information:</b><br/>Central Statistical Office of the Council of Ministers, Sofia.</p> <p><b>Basic source of data:</b><br/>Statistical reports collected regularly by the above office.</p> <p><b>Major deviations from ISIC (Revision 2):</b><br/>The classification of all of the enterprise's primary and subsidiary units is determined by its basic activity. Where the enterprise engages in more than one kind of activity, the nature of the main product determines the classification; if no product accounts for more than 80 per cent of total output, the enterprise is classified under miscellaneous manufacturing (ISIC 390). Repair services for the general public are included in total manufacturing (ISIC major division 3). Publishing (part of ISIC 342) is not included in manufacturing. Up to 1993 data for co-operative enterprises are included in ISIC 390. All other ISICs include only state-owned enterprises. As of 1994 all ISICs include all enterprises.</p> <p><b>Reference period (if not calendar year):</b></p> <p><b>Scope:</b><br/>Up to 1992, all state and co-operative industrial enterprises with independent balance-sheets. Subsidiary industrial activity of non-industrial enterprises, industrial organizations and private enterprises are excluded. Beginning 1993, all enterprises. The index numbers of industrial production cover, in principle, all industrial establishments.</p> <p><b>Method of enumeration:</b><br/>Not reported.</p> <p><b>Adjusted for non-response:</b><br/>Not reported.</p> | <p><b>Concepts and definitions of variables:</b><br/>Up to 1992, <u>number of enterprises</u> is as of 31 December of the reference year. Figures for <u>wages and salaries</u> are computed by UNIDO from reported wages and salaries per employee.<br/><u>Value added</u> is gross value added in basic prices.<br/><u>Gross fixed capital formation</u> refers to the net increase in fixed assets other than land during the reference year. ## CAMEROON

**Supplier of information:**

Direction de la statistique et de la comptabilité nationale, Ministère de l'économie et des finances, Yaoundé.

**Basic source of data:**

Annual industrial survey.

**Major deviations from ISIC (Revision 2):**

Data collected under the national classification system have been reclassified by the national authorities to correspond with ISIC (Rev. 2). Lack of detail in national data, however, results in several cases where exact correspondence with the ISIC cannot be achieved. Manufacture of rubber footwear (part of ISIC 355) and plastic footwear (part of ISIC 356) are included in ISIC 324. Repair of bicycles and motorcycles (part of ISIC major division 9) is included in ISIC 384.

**Reference period (if not calendar year):**

Fiscal year ending 30 June of the year indicated.

**Scope:**

All industrial enterprises in the modern sector which keep accounting records.

**Method of enumeration:**

Questionnaires are distributed by mail with follow-up site visits as required.

**Adjusted for non-response:**

No.

**Concepts and definitions of variables:**

Output includes revenues from goods shipped in the same condition as received. It excludes the value of goods and capital assets produced by the enterprise for its own use.

Value added is the value of all products and services rendered by the enterprise, including the value of fixed capital assets produced on own account and the net change in the value of work in progress less the costs of intermediate goods and services.

**Related national publications:**

It is calculated as gross output less the cost of materials, fuels and other supplies, goods shipped in the same condition as received and electricity purchased. It includes receipts for various non-industrial services, but does not include interest or rental other than on machinery produced and rented. The cost of non-industrial services is not deducted.</p> <p><b>Related national publications:</b></p> |

## CROATIA

**Supplier of information:**

Central Bureau of Statistics (CBS) of the Republic of Croatia, Zagreb.

**Basic source of data:**

The Complex Annual Report of Economic Establishments and the Annual Report on Investment in Fixed Assets. Data on number of establishments are provided by the Register Division.

**Major deviations from ISIC (Revision 2):**

None reported.

**Reference period (if not calendar year):****Scope:**

Data refer to industrial activities of the legal entities.

**Method of enumeration:**

Questionnaires are distributed by mail.

**Adjusted for non-response:**

Not reported.

**Concepts and definitions of variables:**

Number of establishments is the number as of 31 December of the reference year (whether active or not).

Figures for wages and salaries were derived from reported monthly wages and salaries per employee. They refer to net wages after subtraction of social insurance contributions, contributions to pension and welfare funds and taxes. In all other respects they conform to the UN concepts and definitions. For the year 1992, reported data in Croatian dinars (officially denoted HRD) have been converted to kunas (officially denoted HRK) with 1 HRK = 1000 HRD.

Gross fixed capital formation refers to investment in industry during the reference year, regardless of the time of payment.

## CYPRUS

**Supplier of information:**

Department of Statistics and Research, Ministry of Finance, Nicosia.

**Basic source of data:**

Annual survey of industrial production.

**Major deviations from ISIC (Revision 2):**

Data exclude cottage industry (embroidery, weaving and cane products).

**Reference period (if not calendar year):****Scope:**

All establishments in the Government controlled areas, with adjustments on the basis of the results of the 1992 census.

**Method of enumeration:**

For the annual survey establishments are sampled. Data are collected for establishments in the sample through interviews. Every five years, the Department conducts a census of industrial production covering establishments with 5 or more persons engaged on a complete enumeration basis and establishments with 4 or fewer persons engaged on a sample basis. The census provides the basis for reviewing the intercensal estimates of output, value added and employment that are compiled from the annual survey. The frame for the census as well as for the annual survey is provided by a registry of establishments, which is updated prior to each census.

**Adjusted for non-response:**

Yes.

**Concepts and definitions of variables:**

Output is gross output. It does not include VAT.

Value added is total value added.

**Related national publications:**

Industrial Statistics (annual); Statistical Abstract (annual); Economic Report (annual); Index Numbers of Industrial Production (irregular), all published by the Department of Statistics and Research, Ministry of Finance, Nicosia.

## DENMARK

**Supplier of information:**

Danmarks Statistik, Copenhagen.

Industrial statistics for the OECD countries are compiled by the OECD secretariat, which supplies them to UNIDO.

**Basic source of data:**

Surveys based partly on the establishment as a local unit (employment, wages and salaries, gross fixed capital formation) and partly on kind-of-activity units (output, value added).

**Major deviations from ISIC (Revision 3):**

The data presented in ISIC Revision 3 were originally classified according to NACE Revision 1.

**Reference period (if not calendar year):****Scope:**

The figures for number of establishments, employment and wages and salaries were derived from the register-based statistics of establishments and employment. All establishments with any employment in manufacturing are covered. Data for production, value added and investment refer to enterprises employing 20 or more persons engaged.

**Method of enumeration:**

Not reported.

**Adjusted for non-response:**

Not reported.

**Concepts and definitions of variables:**

Number of employees refers to all full-time and part-time employees and all self-employed at end November.

Wages and salaries include all outlays of these kinds reported to the tax authorities by establishments operating during the year. This means that outlays even in establishments which are not in activity at end November are included in the figures.

Output is given as gross output in factor values. It includes the value of all products, net change of work in progress, work done on own account, services rendered, goods shipped in the same condition as received, electricity sold, fixed assets produced for own use, net changes in stocks of finished goods, goods made by homeworkers and handicraft workers and other elements of turnover.

Value added is calculated as the value of gross output less the cost of materials, fuels and other supplies, contract and commission work done by others, goods shipped in the same condition as received and electricity purchased. Input estimates are on a consumed basis.

Gross fixed capital formation is given as the value of purchases of fixed assets, including own-account construction of assets, less the value of sales of fixed assets. Fixed assets are those with a productive life of more than three years, including assets made by a unit's labour force for its own use, additions, alterations and improvements to existing assets, new and used assets.

Valuation is a full cost incurred, including the delivered price and the installation cost. For assets produced by the unit, the cost of work put in progress is used. The actual amount realized is taken when deducting sales and used assets.

## EGYPT

**Supplier of information:**

Central Agency for Public Mobilisation and Statistics (CAPMAS), Cairo.

**Basic source of data:**

Survey of industrial production.

**Major deviations from ISIC (Revision 2):**

The Egyptian industrial classification system is based on the preceding version of the ISIC, but the data have been adjusted by the national authorities to correspond with ISIC (Rev. 2) as far as details permit.

**Reference period (if not calendar year):**

Fiscal year beginning 1 July of the year indicated.

**Scope:**

All establishments in the public sector and establishments with 10 or more persons engaged in the private sector. The indices of industrial production cover all industrial establishments.

**Method of enumeration:**

Individual sites were visited by enumerators.

**Adjusted for non-response:**

Not reported.

**Concepts and definitions of variables:**

Output is gross output.

Value added is net of depreciation.

**Related national publications:**

Statistics of Industrial Production (irregular); Basic Statistics (irregular); Statistical Handbook (annual), all published by the Central Agency for Public Mobilisation and Statistics (CAPMAS), Cairo.
