OCCASION

This publication has been made available to the public on the occasion of the 50th anniversary of the United Nations Industrial Development Organisation.

TOGETHER
for a sustainable future

DISCLAIMER

This document has been produced without formal United Nations editing. The designations employed and the presentation of the material in this document do not imply the expression of any opinion whatsoever on the part of the Secretariat of the United Nations Industrial Development Organization (UNIDO) concerning the legal status of any country, territory, city or area or of its authorities, or concerning the delimitation of its frontiers or boundaries, or its economic system or degree of development. Designations such as “developed”, “industrialized” and “developing” are intended for statistical convenience and do not necessarily express a judgment about the stage reached by a particular country or area in the development process. Mention of firm names or commercial products does not constitute an endorsement by UNIDO.

FAIR USE POLICY

Any part of this publication may be quoted and referenced for educational and research purposes without additional permission from UNIDO. However, those who make use of quoting and referencing this publication are requested to follow the Fair Use Policy of giving due credit to UNIDO.

EXPLANATORY NOTES

Unless otherwise indicated, "manufacturing" includes the industry groups listed under Major Division 3 in the International Standard Industrial Classification of All Economic Activities (United Nations publication, Sales No. E.68.XVII.8).

International Standard Industrial Classification of All Economic Activities (ISIC) code numbers are accompanied by a descriptive title (for example, ISIC 323: "Manufacture of leather and products of leather, leather substitutes and fur, except footwear and wearing apparel"). For considerations of space, however, the description is sometimes shortened (i.e. ISIC 323 may be described simply as "Leather and leather products"). For the same reason, the descriptive titles of code numbers of the Standard International Trade Classification (United Nations publication, Sales No. E.61.XVII.6) and the names of countries are sometimes shortened.

In the tabular presentations, and in the figure showing individual countries, the countries are listed alphabetically. Due to lack of data, some African countries could not be included at all or could only be included in some tables in the document.

References to dollars (\$) are to United States dollars. For production and wages data, national currencies have been converted to dollar equivalents by using official rates of exchange, wherever appropriate. In several instances, a free market rate has been used. For economies with multiple exchange rates, an effective exchange rate has been derived from trade data given in national currency and dollars and published in International Financial Statistics (International Monetary Fund). The data used in section four have been presented in dollar terms by using the exchange rates published in Commodity Trade Statistics (United Nations publication).

Unless otherwise indicated, growth rates are calculated from the data available for each year of a given period (e.g. 1963-1981), using a semi-log regression over time.

Periods set off by a hyphen (e.g. 1963-1981) include the beginning and end years.

Apparent arithmetical discrepancies, such as percentages that do not add up to precise totals, result from the rounding of basic data or figures known to different degrees of precision.

Three dots (...) indicate that data are not available or are not separately reported.

One dot (.) indicates that a branch of industry is not represented in a given country and is consequently not included in calculations.

A dash (-) indicates that an amount is nil or negligible.

The letter x designates the item applicable to a country when several options exist.

A minus (-) sign before a figure denotes a decrease.

An inequality sign (>1000) refers to growth rates higher than one thousand per cent.

The following abbreviations are used:

cap. and cons. dur. goods	capital and consumer durable goods
CEAO	West African Economic Community
CEPGL	Economic Community of the Great Lakes Countries
cons. non-dur. goods	consumer non-durable goods
ECOWAS	Economic Community of West African States
FAO	Food and Agriculture Organization of the United Nations
GDP	gross domestic product
ISIC	International Standard Industrial Classification of all Economic Activities
LDC	least developed countries
MARIUN	Mano River Union
MVA	manufacturing value added
n.e.s.	not elsewhere specified
SITC	Standard International Trade Classification, Revised
UDEAC	Customs and Economic Union of Central Africa
UNIDO	United Nations Industrial Development Organization
UNSO	Statistical Office of the United Nations Secretariat

INTRODUCTION

The main purpose of this document is to provide statistical indicators relevant to an international comparison of the process of industrialization in Africa. The interest in such indicators arises in connection with the Industrial Development Decade for Africa. The decade's goals call for new approaches to industrial planning. It stresses the need to assess natural resource and raw material endowments in Africa and to guide industrial development in each country toward activities that will complement, rather than duplicate, industrial developments in other African countries.

The decade's success will ultimately be determined by developments within Africa, since the main responsibility for action lies with the countries themselves. Nevertheless, an important ingredient for this success - and for attaining the necessary degree of co-operation (both regionally and internationally) - is a comprehensive statistical basis assessing progress and the opportunities for co-operation. Unfortunately, the availability and quality of statistics on countries is closely related to their level of development. In the case of Africa, detailed information on the nature of industrial development - and in particular the crucial interrelationships between agriculture and manufacturing - is not always available. Thus, in preparing this document, the UNIDO secretariat undertook an extensive search of national, regional and international sources in order to supplement the available statistical information. While this search yielded additional material, it also necessitated further analysis and adjustment to ensure that statistics being compiled from different sources were expressed in a comparable and consistent fashion.

Information has been compiled in the form of indicators, e.g., ratios, growth rates, indices and rank-orderings, that are designed to facilitate international comparisons. The tables and figures comprising this document are organized in four sections. The first three sections provide several indicators on manufacturing production, employment, wages and consumption. The three sections respectively show the tables and figures dealing with the sector as a whole, with the branches and with the products. Section four includes indicators of trade in manufactures.

Sources and Methods

The UNIDO data base, on which the document also draws, is composed mainly of data communicated to the United Nations by official national sources and published by UNSO in the Industrial Statistics Yearbook, vol. I, General Industrial Statistics. To facilitate the comparability of these data over time and across countries, they have been supplemented from sources that include industrial censuses, statistics supplied by national and international organizations, unpublished data collected in the field by UNIDO^{1/} as well as estimates by the UNIDO secretariat.^{2/}

1/ See, for instance, "L'Industrie Africaine en Chiffres, Vol. II, République Populaire du Bénin" (UNIDO/IS.603) and "L'Industrie Africaine en Chiffres, Vol. III, Burkina Faso" (UNIDO/IS.612).

2/ The estimating procedures followed by UNIDO are described in "The UNIDO data base: primary sources and data base design" (UNIDO/IS.463) and "Industrial Statistics for Research Purposes - Methodology Applied in Compiling UNIDO's International Data on the Number of Employees, Wages and Salaries, Gross Output and Value Added" (UNIDO/IS.558).

In section 1, manufacturing value added (MVA) is estimated in accordance with the "national accounting" concept, which represents the manufacturing sector's net contribution to GDP. In section 2, the measure generally used is "census" value added. Thus, the costs of non-industrial services are included whereas the receipts for these services are excluded.

Section 1: The manufacturing sector as a whole

This section comprises tables 1 and 2 and figure 1. It draws heavily on data provided by UNSO and the Data Bank of World Development Statistics developed by the United Nations Office for Development Research and Policy Analysis.

Table 1 shows total and per capita MVA at current prices expressed in dollars for total Africa, for individual countries and for selected groupings.^{1/} It also shows growth rates of total and per capita MVA derived from data in constant 1980 prices. MVA for total Africa was obtained by summation over all countries presented in the table, MVA for the selected groupings was obtained by summation over the countries belonging to the respective grouping. See Appendix I to this Introduction for the country composition of the various groupings. Per capita MVA for Africa and for the selected groupings was derived as the ratio of MVA to population for total Africa and for the respective groupings. Table 2 shows the contribution of each of individual countries and of selected groupings to the African total and the percentage shares of MVA in GDP and in GDP less services for total Africa, for individual countries and for selected groupings. The aggregated shares of MVA are calculated by dividing the sum of MVA by the sum of GDP or GDP less services. Figure 1 shows curves representing the index numbers of industrial production (1980 = 100) for total Africa and for selected country groupings, also growth rates referring to the periods 1973-1979 and 1979-1984 are presented. The countries included in the groupings are those listed under the appropriate headings in Appendix I.

Section 2: The manufacturing branches

This section provides indicators of the branch structure of the manufacturing sector (table 3 and figure 2) as well as indicators of selected branch characteristics (tables 4 and 5 and figure 3). Branches are defined as "major groups" of the ISIC, reported in accordance with a three-digit code. The ISIC definition of manufacturing comprises 28 major groups (i.e. 28 branches). Information concerning the following branches, however, is not included in tables 3, 4 and 5 and in figure 3: beverages (ISIC 313); tobacco (ISIC 314); petroleum refineries (ISIC 353); and petroleum and coal products (ISIC 354). Production indicators (gross output, value added) for these four branches are highly sensitive to the valuation method (which may or may not include indirect taxes and subsidies), but because this method is not applied

1/ These groupings have been included in section 1 to present information on the manufacturing sector not only for total Africa and for individual countries but also for subregional groups and for some economic associations.

uniformly among countries, international comparison of the branches concerned is not advisable.

Table 3 shows the percentage distribution of value added and employment among manufacturing branches in 1973-1975 and 1982-1984 (or, more exactly, a weighted average of the available years included in the respective periods). In table 3, the valuation may be in producers' prices, in factor values (the equivalent of producers' prices less indirect taxes plus subsidies), or unspecified (when no information is available regarding indirect taxes or subsidies). In the case of "manufacturing employment", preference has been given, whenever possible, to "employees" (meaning the number of persons engaged by an establishment, less working proprietors and unpaid workers) over "persons engaged" (meaning the total number of persons working for the establishment). (Further information concerning the prices used, the method of valuation employed, and the employment data relevant to each country will be found in appendix II to this Introduction.)

Table 3 also presents the inter-branch dispersion of three ratios: value added per employee; non-wage component of value added; and wages per employee. In this document, the term "wages" refers to wages and salaries. It includes all payments, in cash or in kind, made to employees in return for work done.

The inter-branch dispersion is measured with an index. For each ratio, a base is calculated as the unweighted mean of the value taken by the ratio in the branches represented in the country. The index then relates the ratio of each branch to the base. The rankings of the branches in terms of the value of this ratio are also given. Table 3 focuses on the dispersion of the ratios among existing branches. Thus, branches not represented in a given country are omitted instead of being given a zero value (indicated by a single dot (.)).

Figure 2 shows the distribution of value added, at constant 1980 prices, among selected manufacturing branches, grouped as follows, according to end use:

Consumer non-durable goods (ISIC 311/2, 313, 314, 321, 322)

Intermediate goods (ISIC 351,371)

Capital and consumer durable goods (ISIC 382, 383, 384).

The description of these groups should not be taken too literally, as the composition of the groups, in terms of manufacturing branches, does not always permit the segregation of activities not associated with those indicated by the description.

Table 4 and figure 3 present branch growth rates calculated on the basis of industrial production index numbers (1980 = 100). In some cases, original data were not provided in the ISIC three-digit form applicable to a single branch but in a "combined" form covering several branches. In these cases the index relating to the combination has been applied to each component branch. In the table, the growth rates are ranked in order to facilitate identification of each country's position within African countries in terms of the speed of growth of a given branch.

The growth rates have been calculated over several periods, some of which ending in 1983. Where data for 1963 were not available the growth rates were calculated for the respective periods ending in 1982.

It should be noted that the branches plastic products (ISIC 356), professional and scientific equipment (ISIC 385) and other manufactures (ISIC 390) were excluded from presentation in table 4 due to lack of sufficient information.

Table 5 presents indicators which are characteristic of the manufacturing branches in various countries. These indicators are derived from data on value added, gross output, wages (all at current prices) and employment.

Since several fields of data are involved, the closest year common to all variables has been selected as the reference year for each branch. The preferred year is 1983; however, in many cases 1982 or 1981 have had to be accepted instead.

In many instances the estimates for recent years used in table 3 were not considered reliable enough to serve as indicator for branch characteristics and consequently have been excluded from this table.

Where "employees" data were not available, "persons engaged" data have been used instead (see earlier definition).

Appendix III to this Introduction provides notes on certain aspects of the data used (employment, value added and gross output) and it is recommended that the reader consult them when using this document. A considerably amplified version of these notes is given in the Industrial Statistics Yearbook which also covers deviations from the standards applied. In general, the notes are also applicable to the estimates which supplement the Industrial Statistics Yearbook data. Exceptions include some estimates which are based on manufacturing censuses and whose coverage, therefore, is different from those published in the Industrial Statistics Yearbook, which are based on information derived from annual inquiries and national account calculations.

Due to lack of sufficient information the branches non-ferrous metals (ISIC 372) and other manufactures (ISIC 390) were excluded from presentation in table 5.

Figure 3 shows value-added growth rates in manufacturing branches in Africa. The data used are basically the same as those used in table 4. Using 1980 base weights, the individual country data have been aggregated to form value-added estimates for Africa. (It should be noted that the countries included in the aggregate may be more numerous than those listed in table 4).

The growth rates for some branches are not given because the data from which they would have been derived are too scanty, in terms of country coverage, to meet the minimum standards of representativity.

Section 3: The manufactured products

This section is comprised of table 6, which presents indicators of apparent consumption (production plus imports less exports) at the most detailed level of product specification possible given the basic data available. The indicators are derived from the data or estimates available for 84 products in two separate periods, 1973-1975 and 1981-1983. The primary sources of data included the following United Nations publications: Industrial Statistics Yearbook, vol. II, Commodity Production Statistics; Commodity Trade Statistics, series D; and Yearbook of International Trade Statistics. The

supply/utilization account tapes of the Food and Agriculture Organization of the United Nations (FAO) were used, as were United Nations energy, trade and commodity production tapes. Supplementary data were drawn from various statistical and industrial publications.

The first step in estimating apparent consumption is to achieve a concordance between ISIC and SITC data. Production data are reported in the Industrial Statistics Yearbook, vol. II, at a 6-digit level of specification which does allow for a rather close concordance with SITC; however, even at this level of disaggregation, a simple one-to-one comparison between the two classifications can not be made in the case of a number of products. Consequently, in order to arrive at a homogeneous definition of trade and production in the equation of apparent consumption, it has sometimes been necessary to combine items in one classification, and even in both.

All estimates of apparent consumption have been made in terms of physical units. Some difficulty was experienced, however, because of the need to express the trade and production figures in common units of measurement. Reporting countries are not always consistent in this respect. For instance, trade data may be reported in metric tons and the relevant production statistics in cubic metres. Moreover, a country may, from one year to the next, change the unit of measurement used in compiling its trade statistics. In such cases, the conversion factors used by the United Nations (in, for example, the Industrial Statistics Yearbook, vol. II) have been used.

In order to obtain an accurate picture of apparent consumption it is important to note those cases where there is no domestic production, where consumption is met entirely through imports. The lack of production statistics, however, does not always permit distinction between instances where production is non-existent or negligible and instances where it does exist, but is not reported. If both these situations were treated in the same manner, the result would be occasional underestimation of consumption levels for countries that provide data on imports and produce domestically, but do not report their production. In order to safeguard against this result, various sources, including the Industrial Statistics Yearbook, vol. I, and journals and statistical reports concerning the industry in question were consulted. When these failed to indicate any domestic production, a further check was made through trade sources. There is always the possibility of confusion resulting from the re-export of goods, but in general exports of a given product should be zero when there is no domestic production. Consequently, the assumption of zero domestic production in any country has been tested against existing data for the product concerned, not only in the export data of the country itself, but also the import data of potential trading partners. This last check helps in coping with instances of non-reported exports.

A further problem occurs when a country does not report any trade at all. To safeguard against the erroneous conclusion that no trade took place, when

it may simply not have been reported, the data for all countries trading with the one in question have been examined. Where evidence of trade has been noted, the data reported by the trading partners have been summed up in order to obtain an estimate of the volume of non-reported trade. Thus, the imports/exports of the world from/to a given country are regarded as that country's exports/imports to/from the world.

Where trade data were reported only in value terms, UNIDO has endeavoured to produce estimates in volume terms, using two methods. The first one applies when data for one or two years of the three-year period under consideration are available in terms of both volume and value. In this instance, the average number of physical units per unit of value have been applied to all three years. The second method applies when a country has provided no data, in volume terms, for any year of a period, but when one of its trading partners has provided such data, as well as data in value terms, on its imports from the country concerned. In such cases, a unit value coefficient has been calculated and applied, as in the first method.

Section 4: Trade in manufactures

UNSO is the source of the trade data used in section 4. Data on gross output in manufacturing are from the UNIDO data base.

The products included in trade in manufactures are defined as those items of the SITC (a commodity classification) that correspond to the manufactured goods listed in Major Division 3 of the ISIC (an activity classification). These manufactured goods are classified in four end-use categories. Appendix IV to this Introduction lists the SITC items that correspond to ISIC manufactured goods and classifies them by final use.

Only the countries that provided data at the level of disaggregation required to fit into the setting of appendix IV over the time periods under consideration are included in section 4. All the indicators included in this section are based on data expressed in current dollar terms.

Table 7 shows the average annual growth rates of manufactured and total exports and imports, by country, over periods that range from 1973 to the latest year for which data were available. These averages have been obtained as geometric means. The percentage shares of manufactures in total exports and in total imports are shown in the form of arithmetic means of the annual shares over periods of one to three years ending in the latest year for which information could be obtained. In table 8 selected indicators of trade in manufactures are presented for each country for the latest year for which data were available within the period 1981-1983. These indicators cover per capita exports and imports of manufactures; the shares of exports in gross output and of imports in apparent consumption; the contribution of each country to exports of manufactures of all developing countries; and the ratio of net exports to the sum of exports and imports of manufactures. Finally, table 9 presents the percentage distribution of manufactured exports and imports, by country, across the four end-use categories. This structure is shown in the form of three-year arithmetic averages of annual shares for the reference periods which are 1972-1974 and 1981-1983. However, for countries where data were not available for the years 1981-1983 the latter period refers to the latest year(s) for which information could be obtained.

DEFINITION AND CLASSIFICATION BY END USE OF TRADE IN MANUFACTURES

<u>SITC code</u>	<u>Description</u>
<u>Mainly consumer non-durables</u>	
541	Medicinal and pharmaceutical products
61	Leather, leather manufactures etc.
666	Pottery
821	Furniture
831	Travel goods, handbags etc.
84	Clothing
851	Footwear
89	Miscellaneous manufactured articles, n.e.s.
less: 896	less: works of art, collectors' pieces etc.
<u>Mainly supplies and intermediates</u>	
231	Crude rubber (including synthetic and reclaimed)
less: 231.1	less: natural rubber and similar natural gums
243	Wood, shaped or simply worked
251	Pulp and waste paper
262.6	Wool shoddy
262.7	Wool or other animal hair, carded or combed
262.8	Wool tops
262.9	Waste of wool and other animal hair, n.e.s.
263	Cotton
266	Synthetic and regenerated (artificial) fibres
267	Waste materials from textile fabrics
51	Chemical elements and compounds
521	Mineral tar etc.
53	Dyeing, tanning and colouring materials
55	Essential oils and perfume materials
561	Manufactured fertilizers
571	Explosives and pyrotechnic products
581	Plastic materials etc.
599	Chemical materials and products, n.e.s.
62	Rubber manufactures, n.e.s.
63	Wood and cork manufactures
64	Paper, paperboard and manufactures thereof
65	Textile yarns, fabrics, made-up articles etc.
661	Lime, cement etc.
662	Clay construction materials etc
663	Mineral manufactures, n.e.s.
664	Glass
665	Glassware
67	Iron and steel
68	Non-ferrous metals

SITC code Description

Mainly capital goods and consumer durables

- 69 Manufactures of metal, n.e.s.
- 7 Machinery and transport equipment
- 812 Sanitary, plumbing, heating fixtures etc.
- 86 Professional, scientific and controlling instruments
- less: 863 less: developed cinematographic film

Other manufactures

- 01 Meat and meat preparations
- 02 Dairy products and eggs
- 032 Fish, in airtight containers, n.e.s. and fish preparations
- 042.2 Rice, glazed or polished
- 046 Meal and flour of wheat or of meslin
- 047 Meal and flour of cereals other than 046
- 048 Cereal preparations etc.
- 052 Dried fruit
- 053 Fruit, preserved and fruit preparations
- 055 Vegetables, roots and tubers, preserved or prepared
- 06 Sugar, sugar preparations and honey
- 071.3 Coffee extracts, essences etc.
- 072.2 Cocoa powder, unsweetened
- 072.3 Cocoa butter and cocoa paste
- 073 Chocolate etc.
- 074 Tea and maté
- 081 Feeding-stuff for animals
- 09 Miscellaneous food preparations
- 11 Beverages
- 122 Tobacco manufactures
- 221.9 Flour and meal of oil-seeds etc.
- 332 Petroleum products
- 4 Animal and vegetable oils and fats
