## OCCASION

This publication has been made available to the public on the occasion of the 50<sup>th</sup> anniversary of the United Nations Industrial Development Organisation.

**TOGETHER**  
*for a sustainable future*

## DISCLAIMER

This document has been produced without formal United Nations editing. The designations employed and the presentation of the material in this document do not imply the expression of any opinion whatsoever on the part of the Secretariat of the United Nations Industrial Development Organization (UNIDO) concerning the legal status of any country, territory, city or area or of its authorities, or concerning the delimitation of its frontiers or boundaries, or its economic system or degree of development. Designations such as “developed”, “industrialized” and “developing” are intended for statistical convenience and do not necessarily express a judgment about the stage reached by a particular country or area in the development process. Mention of firm names or commercial products does not constitute an endorsement by UNIDO.

## FAIR USE POLICY

Any part of this publication may be quoted and referenced for educational and research purposes without additional permission from UNIDO. However, those who make use of quoting and referencing this publication are requested to follow the Fair Use Policy of giving due credit to UNIDO.

## CONTACT

## EXPLANATORY NOTES

Unless otherwise indicated, "manufacturing" includes the industry groups listed under Major Division 3 in the *International Standard Industrial Classification of All Economic Activities* (United Nations publication, Sales No. E.68.XVII.8).

International Standard Industrial Classification of All Economic Activities (ISIC) code numbers are accompanied by a descriptive title (for example, ISIC 323: "Manufacture of leather and products of leather, leather substitutes and fur, except footwear and wearing apparel"). For considerations of space, however, the description is sometimes shortened (i.e. ISIC 323 may be described simply as "Leather and leather products"). For the same reason, the descriptive titles of code numbers of the *Standard International Trade Classification* (United Nations publication, Sales No. E.61.XVII.6) and the names of countries are sometimes shortened.

In the tabular presentations, and in the figures showing individual countries, countries are listed alphabetically within five successive categories: centrally planned economies; developed market economies; developing countries with low income (less than \$600 per capita gross domestic product (GDP) in 1978 at current prices); developing countries with middle income (\$600-\$1,320); and developing countries with high income (more than \$1,320). In the case of table 6, an additional group ("others") has been created to accommodate countries or areas that could not be classified elsewhere. Due to lack of data, some countries could not be included in some tables.

References to dollars (\$) are to United States dollars. For production and wages data, national currencies have been converted to dollar equivalents by using official rates of exchange, wherever appropriate. In several instances, a free market rate has been used. For economies with multiple exchange rates, an effective exchange rate has been derived from trade data given in national currency and dollars and published in *International Financial Statistics* (International Monetary Fund). The exchange rates used for the centrally planned economies are the "non-commercial rates applied to tourism and to remittances from outside the rouble area", published in the *Monthly Bulletin of Statistics* (United Nations publication). The data used in section 4 have been presented in dollar terms by using the exchange rates published in *Commodity Trade Statistics* (United Nations publication).

Unless otherwise indicated, growth rates are calculated from the data available for each year of a given period (e.g. 1963-1981), using a semi-log regression over time.

Periods set off by a hyphen (e.g. 1963-1981) include the beginning and end years.

Apparent arithmetical discrepancies, such as percentages that do not add up to precise totals, result from the rounding of basic data or figures known to different degrees of precision.

Three dots ( . . . ) indicate that data are not available or are not separately reported.

One dot ( . ) indicates that a branch of industry is not represented in a given country and is consequently not included in calculations.

A dash (—) indicates that an amount is nil or negligible.

The letter x designates the item applicable to a country when several options exist.

A minus (—) sign before a figure denotes a decrease.

An inequality sign (>1,000) refers to growth rates higher than one thousand per cent.

The following abbreviations are used:

cap. and cons. dur. goods	capital and consumer durable goods
cons. non-dur. goods	consumer non-durable goods
FAO	Food and Agriculture Organization of the United Nations
GDP	gross domestic product
ISIC	International Standard Industrial Classification of all Economic Activities
MVA	manufacturing value added
n.e.s.	not elsewhere specified
NMP	net material product
SITC	Standard International Trade Classification, Revised
UNIDO	United Nations Industrial Development Organization
UNSO	Statistical Office of the United Nations Secretariat

## NOTES EXPLICATIVES

Sauf indication contraire, l'expression "industries manufacturières" s'entend des groupes d'industries figurant dans la "branche 3" de la *Classification internationale type, par industrie, de toutes les branches d'activité économique* (publication des Nations Unies, numéro de vente : F.68.XVII.8).

Les indicatifs de la Classification internationale type, par industrie, de toutes les branches d'activité économique sont accompagnés d'un titre descriptif (par exemple, CITI 323: "Industrie du cuir, des articles en cuir et en succédanés du cuir, et de la fourrure, à l'exclusion des chaussures et des articles d'habillement"). Cependant, le manque de place conduit parfois à abrégé le texte (ainsi, la classe 323 de la CITI peut s'intituler simplement "Industrie du cuir et des articles en cuir"). Pour la même raison, on abrège parfois les titres descriptifs correspondant aux indicatifs de la *Classification type pour le commerce international, révisée* (publication des Nations Unies, numéro de vente : F.61.XVII.6) ainsi que les noms des pays.

Dans les tableaux et dans les figures présentant des pays particuliers, les pays sont classés par ordre alphabétique en cinq catégories : les pays à économie planifiée; les pays développés à économie de marché; les pays en développement à revenus faibles (ceux dont le produit intérieur brut [PIB] par habitant était de moins de 600 dollars en prix courants en 1978); les pays en développement à revenus moyens (entre 600 et 1 320 dollars); les pays en développement à revenus élevés (plus de 1 320 dollars). Dans le cas du tableau 6, il a fallu créer une catégorie supplémentaire ("autres") qui réunit les pays ou zones qui ne peuvent être classés ailleurs. Par suite du manque de données, il y a des pays qui ne sont pas inclus dans certains tableaux ou dans certaines figures.

Le terme "dollar" s'entend du dollar des Etats-Unis d'Amérique. Les données sur la production et les salaires en monnaie nationale ont été converties en dollars en utilisant le taux de change officiel chaque fois que cela se justifiait. Dans plusieurs cas, c'est le taux de change du marché libre qui a été utilisé. Dans le cas d'économies à taux de change multiples, un taux de change opérationnel a été établi à partir des données de commerce publiées à la fois en monnaie nationale et en dollars dans *Statistiques financières internationales* (publication du Fonds monétaire international). Les taux de change utilisés pour les pays à économie planifiée sont les "taux non commerciaux appliqués au tourisme et aux transferts provenant du dehors de la zone rouble", publiés dans le *Bulletin mensuel de statistique* (publication des Nations Unies). Les données sur le commerce utilisées dans la section 4 ont été converties en dollars en utilisant les taux de change publiés dans *Commodity Trade Statistics* (publication des Nations Unies).

Sauf indication contraire, les taux annuels de croissance ou de variation ont été déterminés à partir de données relatives à chaque année d'une période donnée, et calculés selon une régression semi-logarithmique sur série chronologique.

Un trait d'union (-) entre deux millésimes, par exemple 1963-1981, indique qu'il s'agit de la période tout entière, y compris la première et la dernière année mentionnées.

Tout écart apparent dans les chiffres (par exemple, un total qui ne correspond pas exactement à la somme des montants détaillés) est attribuable soit au fait que l'on a arrondi les données de base, soit au fait que des données, dont le degré de précision variait, ont été arrondies.

Un point (.) indique qu'une branche d'industrie n'est pas représentée dans un pays donné et n'est, par conséquent, pas incluse dans les calculs.

Trois points (...) indiquent, soit que l'on ne possède pas de renseignements, soit que les renseignements en question n'ont pas été fournis séparément.

Un tiret (-) indique que le montant est nul ou négligeable.

La lettre x désigne la rubrique qui s'applique à un pays lorsque plusieurs options se présentent.

Le signe moins devant un nombre, par exemple -2, indique un déficit ou une diminution.

Un signe d'inégalité (>1 000) se réfère à des taux de croissance supérieurs à mille pour cent.

Les sigles suivants ont été utilisés dans la présente publication :

Biens de capit. et d. cons. dur.	Biens de capital et de consommation durables
Biens de cons. non durables	Biens de consommation non durables
CITI	Classification internationale type, par industrie, de toutes les branches d'activité économique
CTCI	Classification type pour le commerce international, révisée
FAO	Organisation des Nations Unies pour l'alimentation et l'agriculture
n.d.a.	non désigné ailleurs
Pays dev. à économie de marché	Pays développés à économie de marché
PIB	Produit intérieur brut
PMN	Produit matériel net
VALE	Valeur ajoutée manufacturière

# Introduction

The main purpose of the present *Handbook* is to provide statistical indicators relevant to drawing international comparisons of the process of industrialization. While relying largely on existing data—particularly data compiled by the Statistical Office of the United Nations Secretariat (UNSO)—the *Handbook* is original in two ways. First, the basic data accumulated have been combined to form indicators such as ratios, growth rates, indices and rank-orderings which facilitate comparison. Second, many of the indicators presented are derived from estimates made by UNIDO to supplement data missing from the traditional sources.

The tables and figures that comprise the *Handbook* are presented in four sections. The first three sections provide indicators of manufacturing production, employment, wages and consumption. They deal with the manufacturing sector as a whole; with its branches; and with its products. Section 4 provides indicators of trade in manufactures.

## Sources and methods

The UNIDO data base, on which the *Handbook* also draws, is composed mainly of data communicated to the United Nations by official national sources and published by UNSO in the *Yearbook of Industrial Statistics*. To facilitate the comparability of these data over time and across countries, they have been supplemented from sources that include industrial censuses, statistics supplied by national and international organizations, unpublished data collected in the field by UNIDO as well as estimates by the UNIDO Secretariat.<sup>1</sup>

In section 1, manufacturing value added (MVA) is estimated in accordance with the "national accounting" concept, which represents the manufacturing sector's net contribution to GDP. In section 2, the measure generally used is "census" value added. Thus, the costs of non-

<sup>1</sup>The estimating procedures followed by UNIDO are described in "The UNIDO data base: primary sources and data base design" (UNIDO/IS.463) and "Industrial statistics for research purposes—methodology applied in compiling UNIDO's international data on the number of employees, wages and salaries, gross output and value added" (UNIDO/IS.558).

industrial services are included, whereas the receipts for these services are excluded.

## Section 1: *The manufacturing sector as a whole*

This section comprises tables 1 and 2 and figure 1. It draws heavily on data provided by UNSO and the *Data Bank of World Development Statistics* developed by the United Nations Office for Development Research and Policy Analysis.

Table 1 shows individual countries' total and per capita MVA at current prices, expressed in dollars. It also shows growth rates of total and per capita MVA derived from data in constant 1980 prices. Table 2 shows the percentage shares of MVA in GDP and in GDP less services for individual countries and for selected country groupings, in which case the aggregated shares of MVA are calculated by dividing the sum of MVA by the sum of GDP or GDP less services. In the case of the centrally planned economies, the data available refer to net material product (NMP) rather than GDP. As the two concepts are not strictly comparable, the centrally planned economies have been omitted from tables 1 and 2. Figure 1 shows curves representing the index numbers of industrial production (1980 = 100) for selected country groupings. Growth rates referring to the periods 1973-1979 and 1979-1984 are also presented. The countries included in the income and economic groupings are those listed under the appropriate headings in table 1 plus the centrally planned economies of Europe and USSR. Appendix I to this Introduction lists the countries grouped together under Africa; South and East Asia; West Asia; and Latin America; as well as those countries classified as "least developed".

## Section 2: *The manufacturing branches*

This section provides indicators of the branch structure of the manufacturing sector (table 3 and figure 2) as well as indicators of selected branch characteristics (tables 4 and 5 and figure 3). Branches are defined as "major groups" of the ISIC, reported in accordance with a three-digit code. The ISIC definition of manufacturing comprises 28 major groups (i.e. 28 branches). Information concerning the following branches, however, is not included in tables 3, 4 and 5, or in

figure 3: beverages (ISIC 313); tobacco (ISIC 314); petroleum refineries (ISIC 353); and petroleum and coal products (ISIC 354). Production indicators (gross output, value added) for these four branches are highly sensitive to the valuation method (which may or may not include indirect taxes and subsidies), but because this method is not applied uniformly among countries, international comparison of the branches concerned is not advisable.

Table 3 shows the percentage distribution of value added and employment among manufacturing branches in 1973-1975 and 1982-1984 (or, more exactly, a weighted average of the years for which data were available in the two periods). In table 3, the valuation may be in producers' prices, in factor values (the equivalent of producers' prices less indirect taxes plus subsidies), or unspecified (when no information is available regarding indirect taxes or subsidies). In the case of "manufacturing employment", preference has been given, whenever possible, to "employees" (meaning the number of persons engaged by an establishment, less working proprietors and unpaid workers) over "persons engaged" (meaning the total number of persons working for the establishment). (Further information concerning the prices used, the method of valuation employed, and the employment data relevant to each country will be found in appendix II to this Introduction.)

Table 3 also presents the inter-branch dispersion of three ratios: value added per employee; non-wage component of value added; and wages per employee. In this *Handbook*, the term "wages" refers to wages and salaries. It includes all payments, in cash or in kind, made to employees in return for work done.

The inter-branch dispersion is measured with an index. For each ratio, a base is calculated as the unweighted mean of the value taken by the ratio in the branches represented in the country. The index then relates the ratio of each branch to the base. The rankings of the branches in terms of the value of this ratio are also given. Table 3 focuses on the dispersion of the ratios among existing branches. Thus, branches not represented in a given country are omitted instead of being given a zero value (indicated by a single dot (.)).

Figure 2 shows the distribution of value added, at constant 1980 prices, among selected manufacturing branches, grouped as follows, according to end use:

- Consumer non-durable goods (ISIC 311/2, 313, 314, 321, 322)
- Intermediate goods (ISIC 351,371)
- Capital and consumer durable goods (ISIC 382, 383, 384).

The description of these groups should not be taken too literally, as the composition of the groups, in terms of manufacturing branches, does

not always permit the segregation of activities not associated with those indicated by the description.

Table 4 and figure 3 present branch growth rates calculated on the basis of industrial production index numbers (1980 = 100). In some cases, original data were not provided in the ISIC three-digit form applicable to a single branch but in a "combined" form covering several branches. In these cases the index relating to the combination has been applied to each component branch. In the table, the growth rates are ranked in order to facilitate identification of each country's position within its particular grouping, in terms of the speed of growth of a given branch.

The growth rates have been calculated over several periods, some of them ending in 1983. Where data for 1983 were not available, the rates were calculated for periods ending in 1982.

Table 5 presents indicators which are characteristic of the manufacturing branches in various countries. These indicators are derived from data on value added, gross output, wages (all at current prices) and employment.

Since several fields of data are involved, the closest year common to all variables has been selected as the reference year for each branch. The preferred year is 1983; however, in many cases 1982 or 1981 have had to be accepted instead.

In many instances, the estimates for recent years used in table 3 were not considered reliable enough to serve as indicators of branch characteristics and, consequently, were excluded from the table.

Where "employees" data were not available, "persons engaged" data were used instead (see earlier definition).

Appendix III to this Introduction provides notes on certain aspects of the data used (employment, value added and gross output) and it is recommended that the reader consult them when using the *Handbook*. A considerably amplified version of these notes is given in the *Yearbook of Industrial Statistics*, which also covers deviations from the standards applied. In general, the notes are also applicable to the estimates which supplement the *Yearbook* data. Exceptions include some estimates which are based on manufacturing censuses and whose coverage, therefore, is different from those published in the *Yearbook*, which are based on information derived from annual inquiries and national account calculations.

Figure 3 shows value-added growth rates in manufacturing branches in selected country groupings. The data used are basically the same as those used in table 4. Using 1980 base weights, the individual country data have been aggregated to form value-added estimates for each grouping. (It should be noted that the countries normally belonging to aggregate country groupings may be more numerous than those listed in table 4.)

With respect to the developing country groupings, the growth rates for some branches are

not given because the data from which they would have been derived are too scanty, in terms of country coverage, to meet the minimum standards needed for representative grouping.

### **Section 3: The manufactured products**

This section is comprised of table 6, which presents indicators of apparent consumption (production plus imports less export.) at the most detailed level of product specification possible given the basic data available. The indicators are derived from the data or estimates available for 92 products in two separate periods, 1973-1975 and 1981-1983. The primary sources of data included the following United Nations publications: *Yearbook of Industrial Statistics*, vol. II, Commodity Production Statistics; *Commodity Trade Statistics*, Series D; and *Yearbook of International Trade Statistics*. The supply/utilization account tapes of the Food and Agriculture Organization of the United Nations (FAO) were used, as were United Nations energy, trade and commodity production tapes. Supplementary data were drawn from various statistical and industrial publications.

In table 6, as well as in section 4, data for Belgium cover the Belgium-Luxembourg Economic Union. Data for South Africa cover the South African Common Customs Area, which includes Botswana, Lesotho, Namibia, South Africa and Swaziland. Data for the United States cover Puerto Rico.

The first step in estimating apparent consumption is to achieve a concordance between ISIC and SITC data. Production data are reported in the *Yearbook of Industrial Statistics*, vol. II, at a 6-digit level of specification which does allow for a rather close concordance with SITC; however, even at this level of disaggregation, a simple one-to-one comparison between the two classifications can not be made in the case of a number of products. Consequently, in order to arrive at a homogeneous definition of trade and production in the equation of apparent consumption, it has sometimes been necessary to combine items in one classification, and even in both.

All estimates of apparent consumption have been made in terms of physical units. Some difficulty was experienced, however, because of the need to express the trade and production figures in common units of measurement. Reporting countries are not always consistent in this respect. For instance, trade data may be reported in metric tons and the relevant production statistics in cubic metres. Moreover, a country may, from one year to the next, change the unit of measurement used in compiling its trade statistics. In such cases, the conversion factors used by the United Nations (in, for example, the *Yearbook of Industrial Statistics*, vol. II) have been used.

In order to obtain an accurate picture of apparent consumption it is important to note those

cases where there is no domestic production, where consumption is met entirely through imports. The lack of production statistics, however, does not always permit distinction between instances where production is non-existent or negligible and instances where it does exist, but is not reported. If both these situations were treated in the same manner, the result would be occasional underestimation of consumption levels for countries that provide data on imports and produce domestically, but do not report their production. In order to safeguard against this result, various sources, including the *Yearbook of Industrial Statistics*, vol. I, and journals and statistical reports concerning the industry in question were consulted. When these failed to indicate any domestic production, a further check was made through trade sources. There is always the possibility of confusion resulting from the re-export of goods, but in general exports of a given product should be zero when there is no domestic production. Consequently, the assumption of zero domestic production in any country has been tested against existing data for the product concerned, not only in the export data of the country itself, but also the import data of potential trading partners. This last check helps in coping with instances of non-reported exports.

A further problem occurs when a country does not report any trade at all. To safeguard against the erroneous conclusion that no trade took place, when it may simply not have been reported, the data for all countries trading with the one in question have been examined. Where evidence of trade has been noted, the data reported by the trading partners have been summed up in order to obtain an estimate of the volume of non-reported trade. Thus, the imports/exports of the world from/to a given country are regarded as that country's exports/imports to/from the world.

Where trade data were reported only in value terms, UNIDO has endeavoured to produce estimates in volume terms, using two methods. The first one applies when data for one or two years of the three-year period under consideration are available in terms of both volume and value. In this instance, the average number of physical units per unit of value have been applied to all three years. The second method applies when a country has provided no data, in volume terms, for any year of a period, but when one of its trading partners has provided such data, as well as data in value terms, on its imports from the country concerned. In such cases, a unit value coefficient has been calculated and applied, as in the first method.

### **Section 4: Trade in manufactures**

UNSO is the source of the trade data used in section 4. Data on gross output in manufacturing are from the UNIDO data base.

The products included in trade in manufactures are defined as those items of the SITC (a commodity classification) that correspond to the manufactured goods listed in Major Division 3 of the ISIC (an activity classification). These manufactured goods are classified in four end-use categories. Appendix IV to this Introduction lists the SITC items that correspond to ISIC manufactured goods and classifies them by final use.

Only the countries that provided data at the level of disaggregation required to fit into the setting of appendix IV over the time periods under consideration are included in section 4. In this section, the coverage of data for Belgium, South Africa and the United States is the same as in table 6 (see above). All the indicators included in the section are based on data expressed in current dollar terms.

Table 7 shows the average annual growth rates of manufactured and total exports and imports, by country, over a period generally

spanning the years 1973-1983. These averages have been obtained as geometric means. The percentage shares of manufactures in total exports and in total imports are shown in the form of arithmetic means of the annual shares over a period generally spanning the years 1981-1983. In table 8, selected indicators of trade in manufactures are presented for each country for the latest year for which data were available within the period 1981-1983. These indicators cover per capita exports and imports of manufactures; the shares of exports in gross output and of imports in apparent consumption; the contribution of each country to world exports of manufactures; and the ratio of net exports to the sum of exports and imports of manufactures. Finally, table 9 presents the percentage distribution of manufactured exports and imports, by country, across the four end-use categories. This structure is shown in the form of three-year arithmetic averages of annual shares for the reference periods which are, in general, 1972-1974 and 1981-1983.

# Introduction

Ce *Manuel* a essentiellement pour but de regrouper des indicateurs statistiques utilisables pour l'analyse du processus d'industrialisation au plan international. Bien que fondé en grande partie sur des données disponibles ailleurs, en particulier les séries établies par le Bureau de statistique des Nations Unies, le présent *Manuel* se veut original à deux égards : en premier lieu, les données de base réunies sont présentées sous des formes analytiques telles que ratios, taux de croissance, indices et classements par ordre de grandeur, qui facilitent les comparaisons; en second lieu, un grand nombre d'indicateurs sont établis à partir d'estimations faites par l'Organisation des Nations Unies pour le développement industriel (ONUDI) afin de compléter à l'information existante.

Les tableaux et figures du Manuel sont distribués en quatre sections. Les trois premières sections regroupent divers indicateurs se rapportant à la production manufacturière, à l'emploi, aux salaires et à la consommation. Elles traitent de l'ensemble du secteur manufacturier, de ses branches et de ses produits. La section 4 fournit des indicateurs ayant trait au commerce d'articles manufacturés.

## Sources et méthodes

La base de données de l'ONUDI, où puise aussi le présent *Manuel*, comprend surtout les données communiquées aux Nations Unies par des sources officielles nationales et publiées par le Bureau de statistique de l'ONU dans le *Yearbook of Industrial Statistics*. Toutefois, pour faciliter les comparaisons dans le temps et entre les pays, ces données ont été complétées à partir d'autres sources, parmi lesquelles il convient de citer des recensements industriels, des statistiques fournies par diverses organisations nationales et internationales, des données non publiées qui ont été recueillies sur le terrain par l'ONUDI ainsi que des estimations faites par le Secrétariat de l'ONUDI<sup>1</sup>.

Dans la section 1, la valeur ajoutée manufacturière (VAM) est estimée selon la méthode de

<sup>1</sup>Les méthodes d'évaluation appliquées par l'ONUDI sont décrites dans "The UNIDO data base: primary sources and data base design" (UNIDO/IS.463) et "Industrial statistics for research purposes—methodology applied in compiling UNIDO'S international data on the number of employees, wages and salaries, gross output and value added" (UNIDO/IS.558).

comptabilité nationale et représente donc la participation nette du secteur manufacturier au PIB. Dans la section 2, la mesure généralement appliquée est celle qu'adoptent les recensements industriels et qui inclut les coûts et déduit les recettes provenant des services non industriels.

## Section 1: le secteur manufacturier dans son ensemble

Cette section regroupe les tableaux 1 et 2 ainsi que la figure 1. L'information présentée doit beaucoup aux données du Bureau de statistique des Nations Unies et à la *Data Bank of World Development Statistics* établie par le Bureau de la recherche et de l'analyse des politiques en matière de développement des Nations Unies.

Le tableau 1 indique, par pays, les montants en dollars et à prix courants de la VAM totale et de la VAM par habitant. Les taux de croissance de la VAM totale et de la VAM par habitant basés sur des données à prix constants de 1980 sont également présentés dans ce tableau. Le tableau 2 montre les parts de la VAM des pays et de certains groupements de pays dans le PIB et dans le PIB moins les services.

Les parts agrégées de la VAM dans les activités économiques des groupements ont été obtenues en divisant la somme des VAM des pays par la somme de leur PIB ou de leur PIB moins les services. Les données sur les pays à économie planifiée se rapportent au produit matériel net (PMN) plutôt qu'au PIB. Comme ces deux agrégats ne sont pas exactement comparables, les pays à économie planifiée ne sont pas présentés dans les tableaux 1 et 2. La figure 1 représente les indices de la production industrielle (base 100 en 1980) de certains groupements de pays ainsi que les lignes de tendance de ces indices durant les périodes 1973-1979 et 1979-1984. Les pays inclus dans les groupes de revenus et dans les groupements économiques sont ceux qui se trouvent sous les rubriques correspondantes dans le tableau 1 plus les pays à économie planifiée d'Europe et d'URSS. Les listes des pays groupés sous Afrique, Amérique latine, Asie du Sud et de l'Est, Asie occidentale et des pays classés parmi les "moins avancés" se trouvent dans l'appendice I à cette introduction.

## Section 2 : les branches manufacturières

Cette section comprend des indicateurs se rapportant à la structure du secteur manufacturier (tableau 3 et figure 2) et à certaines caractéristiques des branches d'industrie (tableaux 4 et 5, et figure 3).

Les expressions "branches d'industrie" ou "branches" utilisées dans le présent *Manuel* recouvrent les classes d'industries désignées par les indicatifs à trois chiffres figurant sous la rubrique "branche 3" de la CITI. Selon cette définition, le secteur manufacturier devrait comprendre 28 branches. Certaines de ces branches, cependant, ne sont pas incluses dans les tableaux 3, 4 et 5, ni dans la figure 3 : boissons (CITI 313); tabac (CITI 314); raffineries de pétrole (CITI 353); dérivés du pétrole et du charbon (CITI 354). Dans le cas de ces quatre branches, les taxes indirectes et les subsides sont souvent élevés par rapport à la valeur de la production; il n'est donc pas judicieux de comparer ces branches sur le plan international alors que la méthode d'évaluation varie de pays à pays.

Le tableau 3 montre la distribution de la VAM et de l'emploi parmi les branches d'industrie en 1973-1975 et en 1982-1984 (ou, plus exactement, une moyenne pondérée des années pour lesquelles les données étaient disponibles durant les deux périodes).

Dans le tableau 3, l'évaluation peut être en prix à la production, au coût des facteurs (c'est-à-dire aux prix à la production moins les taxes indirectes plus les subsides), ou même être indéterminée (lorsque aucune information sur les taxes indirectes et les subsides n'a pu être obtenue). Pour représenter l'emploi dans le secteur manufacturier la préférence est allée, chaque fois que c'était possible, au nombre de "salariés" (nombre de personnes occupées dans un établissement moins les propriétaires actifs et les travailleurs non salariés) plutôt qu'au nombre de "personnes occupées" (nombre total de personnes travaillant dans ou pour l'établissement). Pour chaque pays, des précisions concernant les prix utilisés, la méthode d'évaluation employée et la définition de l'emploi figurent dans l'appendice II à l'introduction.

Le tableau 3 montre aussi la dispersion entre branches d'industries des valeurs de trois ratios : valeur ajoutée par emploi, part non salariale de la valeur ajoutée, et salaire par emploi. Dans le présent *Manuel*, le terme "salaires" désigne en fait les "salaires et prestations" qui comprennent tous les paiements, en espèces ou en nature, faits aux salariés pour un travail effectué.

La dispersion interbranches est mesurée par un indice. La base en est la moyenne non pondérée des valeurs prises par le ratio considéré dans les branches représentées dans le pays. L'indice mesure la valeur du ratio dans chaque branche par rapport à cette base. Le tableau contient en sus le classement des branches par ordre de grandeur du

ratio considéré. Comme le centre d'intérêt du tableau est la dispersion des valeurs prises par les ratios parmi les branches existantes dans les pays étudiés, les branches qui ne sont pas représentées dans un pays sont omises au lieu de prendre la valeur zéro et indiquées dans le tableau par un point (.)

La figure 2 représente la distribution de la valeur ajoutée en prix constants de 1980 de certaines branches manufacturières, groupées comme suit, selon l'usage final :

Biens de consommation non durables (CITI 311/2, 313, 314, 321, 322);

Biens intermédiaires (CITI 351, 371);

Biens de capital et de consommation durables (CITI 382, 383, 384).

Il faut se garder d'une interprétation trop littérale de ces titres descriptifs car, faute d'une ventilation assez fine des données, il n'a pas toujours été possible d'écarter les activités ne répondant pas au titre du groupe.

Le tableau 4 et la figure 3 présentent les taux de croissance des branches calculés à partir d'indices de la production industrielle basés sur 1980. Il est des cas où l'information originelle n'est pas disponible dans une présentation conforme à l'indicatif à trois chiffres de la CITI, c'est-à-dire se rapportant à une seule branche, mais bien sous une forme regroupant plusieurs branches. Dans ces cas, l'indice se rapportant à l'agrégat a été appliqué à chacune des branches qui y sont regroupées. Dans le tableau, les taux de croissance sont indiqués dans l'ordre de façon à permettre de déterminer la position de chaque pays au sein du groupe du point de vue de la vitesse de croissance d'une branche donnée.

Les taux de croissance sont calculés sur plusieurs périodes dont certaines se terminent en 1983. A défaut de données pour 1983 les taux ont été calculés sur des périodes se terminant en 1982.

Le tableau 5 présente des indicateurs caractéristiques de la situation des branches manufacturières dans divers pays. Ces indicateurs sont fondés sur des données en prix courants relatives à la valeur ajoutée, la production brute et les salaires ainsi que sur des données se rapportant à l'emploi.

Comme il s'agit de combiner des variables différentes, il a été nécessaire de choisir pour chaque branche une année présentant des données pour toutes les variables en jeu. La préférence a été donnée à 1983; à défaut, les années 1982 ou 1981 ont été retenues.

Il arrive souvent que des estimations se rapportant à des années récentes figurant dans le tableau 3 ne présentent pas la fiabilité voulue, pour établir des indicateurs caractérisant une branche isolée. Ces estimations n'ont pas été prises en compte dans l'élaboration du tableau.

A défaut de données sur le nombre de "salariés", il a été fait usage de données sur le

nombre de "personnes occupées" (voir la définition qui en a été donnée précédemment).

L'appendice III à cette introduction informe sur certains aspects des données qui ont été utilisées pour chaque pays (définition de l'emploi, évaluation de la production brute et de la valeur ajoutée). On trouvera plus de détails dans le *Yearbook of Industrial Statistics*, qui contient également des notes résumant ce qui est connu de la pratique des pays en matière de définition des variables et en matière de couverture des données. En général, ces précisions s'appliquent aussi aux estimations qui complètent les données du *Yearbook*. Il y a, cependant, des exceptions, dont les plus notables sont les estimations fondées sur des recensements du secteur manufacturier et qui se rapportent donc à une couverture différente de celle des données, fondées sur des enquêtes annuelles et sur des calculs de comptabilité nationale, que publie le *Yearbook*.

La figure 3 présente les taux de croissance de la valeur ajoutée des branches dans certains groupements de pays. Les données qui ont été utilisées sont essentiellement les mêmes que celles du tableau 4. Les coefficients de pondération de 1980 ont permis d'agréger les données relatives à chacun des pays pour obtenir les estimations de la valeur ajoutée dans les groupements de pays. (On notera que les pays faisant partie de ces groupements peuvent être plus nombreux que ceux que l'on trouve dans le tableau 4.)

Dans le cas de groupements de pays en développement, les taux de croissance de certaines branches ont été omis, eu égard au trop petit nombre de pays présentant des données pour ces branches.

### Section 3 : les produits manufacturés

Cette section comprend le tableau 6, qui saisit le niveau le plus détaillé possible des données sur les produits manufacturés pour présenter des indicateurs de la consommation apparente définie comme étant la somme de la production et des importations moins les exportations. Ces indicateurs ont été établis à partir de données ou d'estimations portant sur 92 produits pendant deux périodes distinctes: 1973-1975 et 1981-1983. Les principales sources de données sont des publications des Nations Unies telles que *Annuaire de statistiques industrielles*, vol. II, *Statistiques de production* (par produit), *Commodity Trade Statistics*, séries D, *Annuaire statistique du commerce international*, les supports magnétiques de la FAO, les supports magnétiques des Nations Unies sur les statistiques de l'énergie, du commerce et de la production, ainsi que des estimations faites par le Secrétariat de l'ONUDI. Des données complémentaires ont été recueillies dans différentes publications statistiques et industrielles.

Comme dans la section 4, les données du tableau 6 relatives à la Belgique se réfèrent à l'Union économique belgo-luxembourgeoise. Les données relatives à l'Afrique du Sud se réfèrent à l'Union douanière d'Afrique du Sud qui comprend l'Afrique du Sud, le Botswana, le Lesotho, la Namibie et le Swaziland. Les données relatives aux Etats-Unis incluent Porto Rico.

La première étape de la démarche suivie pour estimer la consommation apparente a été d'établir une correspondance entre les données de la CITI et de la CTCI. Les données sur la production proviennent du *Yearbook of Industrial Statistics*, vol. II, qui présente une information détaillée jusqu'à un indicatif à six chiffres permettant d'établir une correspondance assez étroite avec la CTCI; cependant, même à ce stade de subdivision, il n'existe pas de bijection entre les deux classifications pour un certain nombre de produits. Dès lors, pour définir de façon homogène la production et le commerce dans l'équation de la consommation apparente, il a quelquefois été nécessaire de regrouper des données provenant de l'une ou de l'autre classification.

Tous les indicateurs de la consommation apparente sont en unités physiques. On a eu, cependant, certaines difficultés, car il arrive que les données du commerce et de la production se rapportant à un même produit soient exprimées dans des unités de mesure différentes, par exemple des tonnes dans un cas et des mètres cubes dans l'autre. En outre, un pays peut changer d'une année à l'autre l'unité de mesure utilisée pour un produit donné. Dans de tels cas, il a été fait usage des facteurs de conversion utilisés par les Nations Unies dans, par exemple, le *Yearbook of Industrial Statistics*, vol. II.

L'absence de statistiques pour un produit ne permet pas toujours de faire la différence entre les cas où il n'y a pas, ou presque pas, de production et ceux où la production existe mais où il n'y a pas d'information à ce sujet. Si ces deux situations sont traitées de la même manière, il y a un risque de sous-estimer la consommation des pays qui fournissent des données sur leurs importations mais qui ne présentent aucune donnée sur leur production intérieure. Afin d'éviter ce genre d'écueil, le *Yearbook of Industrial Statistics*, vol. I, ainsi que des revues et rapports statistiques sur l'industrie d'où provient le produit en question ont été consultés. Lorsque ces sources n'ont pu apporter d'information complémentaire sur la production intérieure, un dernier contrôle a été fait à l'aide des données du commerce. Si l'on excepte la possibilité d'une réexportation, lorsqu'il n'y a pas de production intérieure d'un produit donné il ne peut non plus y avoir d'exportation de ce produit. L'hypothèse selon laquelle il n'y a pas de production nationale a donc été testée en vérifiant l'inexistence de données se rapportant au produit en cause non seulement dans les statistiques d'exportation du pays mais aussi dans les

statistiques d'importation de ses principaux partenaires commerciaux, cette dernière précaution étant nécessaire au cas où des exportations non enregistrées auraient eu lieu.

Un problème similaire s'est présenté lorsque aucune donnée sur le commerce n'était disponible. Pour ne pas conclure erronément à l'absence de commerce alors que peut-être les exportations ou importations n'étaient tout simplement pas enregistrées, l'information disponible auprès de tous les partenaires commerciaux potentiels a été vérifiée. Lorsque cette recherche a révélé qu'un produit donné était exporté ou importé, les quantités en cause ont été estimées en prenant la somme de toutes les exportations du reste du monde vers le pays considéré ou de toutes les importations en provenance de celui-ci faites par le reste du monde.

L'ONUDI s'est efforcée d'estimer le commerce en volume là où seules des données en valeur étaient disponibles. Deux méthodes d'estimation ont été utilisées. La première a été utilisée lorsque les données pour une ou deux des trois années d'une période étudiée étaient disponibles à la fois en valeur et en volume. Dans ce cas, le nombre moyen d'unités physiques par unité de valeur a été appliqué aux trois années. La seconde méthode a été appliquée quand le pays en question ne présentait d'information en termes de quantité pour aucune des trois années mais lorsque l'un de ses partenaires commerciaux déclarait des importations en provenance de ce pays à la fois en termes de volume et en valeur. Dans ce cas, le coefficient de valeur unitaire a été calculé et utilisé comme dans la première méthode.

#### *Section 4 : commerce d'articles manufacturés*

Les données sur le commerce utilisées dans la section 4 proviennent du Bureau de statistique des Nations Unies; les données sur la production brute du secteur manufacturier proviennent de la base de données de l'ONUDI.

Les produits relevant du commerce d'articles manufacturés ont été définis, dans la mesure du possible, comme les produits relevant des rubriques

de la CTCI (classification des marchandises) qui correspondent aux rubriques de la branche 3 de la CITI (classification des activités). Les articles manufacturés sont répartis selon leur usage final en quatre catégories. On trouve dans l'appendice IV à cette introduction, la liste des rubriques CTCI représentant les produits manufacturés ainsi que leur répartition par l'usage final. Seuls les pays disposant pour les périodes requises de données ventilées assez finement pour se prêter à la présentation décrite dans l'appendice IV ont été inclus dans la présente section. Dans la section 4, la couverture des données pour l'Afrique du Sud, la Belgique et les Etats-Unis est la même que celle qui s'applique au tableau 6 (voir ci-dessus). Tous les indicateurs de la section 4 sont construits à partir de données exprimées en dollars courants.

Le tableau 7 présente, par pays, les taux de croissance annuels, définis comme la moyenne géométrique des taux annuels d'une période qui va généralement de 1973 à 1983, des exportations et importations totales et des articles manufacturés. Le tableau présente aussi les parts respectives des articles manufacturés dans les exportations et importations totales, calculées comme la moyenne arithmétique des parts annuelles mesurées au cours d'une période qui va en général de 1981 à 1983.

Le tableau 8 présente, par pays, certains indicateurs du commerce d'articles manufacturés pour la plus récente des années qui vont de 1981 à 1983 pour laquelle on dispose de données. Ces indicateurs comprennent les exportations et importations d'articles manufacturés par habitant; la part des exportations dans la production brute; la part des importations dans la consommation apparente; la participation de chaque pays aux exportations mondiales d'articles manufacturés et le rapport des exportations nettes à la somme des exportations et importations d'articles manufacturés.

Le tableau 9, enfin, présente la distribution par pays des exportations et importations d'articles manufacturés par catégorie d'usage final. Cette structure est calculée comme la moyenne arithmétique des parts annuelles observées au cours des périodes de référence qui sont, en général, 1972-1974 et 1981-1983.

851	Footwear		<i>Mainly capital goods and consumer durables</i>
89	Miscellaneous manufactured articles, n.e.s.		
less: 896	less: works of art, collectors' pieces etc.	69	Manufactures of metal, n.e.s.
		7	Machinery and transport equipment
		812	Sanitary, plumbing, heating fixtures etc.
	<i>Mainly supplies and intermediates</i>	86	Professional, scientific and controlling instruments
231	Crude rubber (including synthetic and reclaimed)	less: 863	less: developed cinematographic film
less: 231.1	less: natural rubber and similar natural gums		
243	Wood, shaped or simply worked		<i>Other manufactures</i>
251	Pulp and waste paper		
262.6	Wool shoddy	01	Meat and meat preparations
262.7	Wool or other animal hair, carded or combed	02	Dairy products and eggs
262.8	Wool tops	032	Fish, in airtight containers, n.e.s. and fish preparations
262.9	Waste of wool and other animal hair, n.e.s.	042.2	Rice, glazed or polished
263	Cotton	046	Meal and flour of wheat or of meslin
266	Synthetic and regenerated (artificial) fibres	047	Meal and flour of cereals other than 046
267	Waste materials from textile fabrics	048	Cereal preparations etc.
51	Chemical elements and compounds	052	Dried fruit
521	Mineral tar etc.	053	Fruit, preserved and fruit preparations
53	Dyeing, tanning and colouring materials	055	Vegetables, roots and tubers, preserved or prepared
55	Essential oils and perfume materials	06	Sugar, sugar preparations and honey
561	Manufactured fertilizers	071.3	Coffee extracts, essences etc.
571	Explosives and pyrotechnic products	072.2	Cocoa powder, unsweetened
581	Plastic materials etc.	072.3	Cocoa butter and cocoa paste
599	Chemical materials and products, n.e.s.	073	Chocolate etc.
62	Rubber manufactures, n.e.s.	074	Tea and maté
63	Wood and cork manufactures	081	Feeding-stuff for animals
64	Paper, paperboard and manufactures thereof	09	Miscellaneous food preparations
65	Textile yarns, fabrics, made-up articles etc.	11	Beverages
		122	Tobacco manufactures
		221.9	Flour and meal of oil-seeds etc.
		332	Petroleum products
		4	Animal and vegetable oils and fats

*Appendice IV*

**DÉFINITION ET CLASSIFICATION PAR UTILISATION FINALE DU COMMERCE  
D'ARTICLES MANUFACTURÉS**

<i>Indicatif CITI</i>	<i>Description</i>	<i>Indicatif CITI</i>	<i>Description</i>
	<i>Principalement, biens de consommation non durables</i>	663	Articles minéraux manufacturés, n.d.a.
		664	Verre
541	Produits médicaux et pharmaceutiques	665	Verrerie
61	Cuirs, articles manufacturés en cuir, etc.	67	Fer et acier
666	Poterie	68	Métaux non ferreux
821	Meubles		<i>Principalement, biens d'équipement et de consommation durables</i>
831	Articles de voyage, sacs à main, etc.	69	Articles manufacturés en métal, n.d.a.
84	Vêtements	7	Machines et matériel de transport
851	Chaussures	812	Appareils sanitaires et appareillage de plomberie, de chauffage et d'éclairage
89	Articles manufacturés divers, n.d.a.		Instruments professionnels, scientifiques et de contrôle
moins : 896	moins : objets d'art, de collection, etc.	86	moins : pellicules cinématographiques impressionnées, développées
	<i>Principalement, fournitures et biens intermédiaires</i>		<i>Autres produits manufacturés</i>
231	Caoutchouc brut (y compris le caoutchouc synthétique et le caoutchouc régénéré)	moins : 863	
moins : 231.1	moins : caoutchouc naturel et gommes naturelles similaires	01	Viandes et préparations de viande
243	Bois équarris ou dégrossis	02	Produits laitiers et œufs
251	Pâte à papier et déchets de papier	032	Poisson contenu dans des récipients fermés hermétiquement, n.d.a., et produits à base de poisson
262.6	Laine d'effilochage		Riz, glacé ou poli
262.7	Laine ou poils, cardés ou peignés (non compris la laine en mèches [tops])	042.2	Semoule et farine de froment ou de méteil
262.8	Laine en mèches (tops)	046	Semoule et farine de céréales autres que 046
262.9	Déchets de laine et d'autres poils d'origine animale, n.d.a.	047	Produits à base de céréales
263	Coton	048	Fruits séchés
266	Fibres synthétiques et artificielles	052	Préparations et conserves de fruits
267	Déchets de textiles	053	Légumes, racines et tubercules, en conserve ou préparations à base de légumes
51	Éléments chimiques et composés	055	Sucre, préparations à base de sucre, et miel
521	Goudron minéral, etc.		Extraits ou essences de café
53	Produits pour teinture, tannage et colorants	06	Poudre de cacao, non sucrée
55	Huiles essentielles et produits utilisés en parfumerie		Beurre de cacao et pâte de cacao
561	Engrais manufacturés	071.3	Chocolat, etc.
571	Explosifs et articles de pyrotechnie	072.2	Thé et maté
581	Matières plastiques, etc.	072.3	Nourriture destinée aux animaux
599	Matières et produits chimiques, n.d.a.	073	Préparations alimentaires diverses
62	Caoutchouc manufacturé, n.d.a.	074	Boissons
63	Articles manufacturés en bois et en liège	081	Tabacs manufacturés
64	Papier, carton et articles manufacturés en papier, carton ou pâte de bois	09	Farines de graines oléagineuses, non déshuilées, etc.
65	Filés, tissus, articles textiles façonnés, etc.	11	Produits dérivés du pétrole
661	Chaux, ciment, etc.	122	Huiles et graisses d'origine animale ou végétale
662	Matériaux de construction en argile, etc.	221.9	
		332

**RECENT SALES PUBLICATIONS PREPARED BY THE INDUSTRIAL  
STATISTICS AND INDUSTRIAL DEVELOPMENT SURVEY SECTION  
OF THE UNITED NATIONS INDUSTRIAL DEVELOPMENT ORGANIZATION**

**Industry in the 1980s: Structural Change and Interdependence (Sales No. E.85.II.B.8 \$15.50)**

This publication provides a wide-ranging review of structural change in manufacturing, production, trade and employment, and in the consumption of manufactures. It focuses on aspects of industrial interdependence that have international dimensions as well as on those that are predominantly domestic in character. A number of industrial studies illustrate these and other characteristics of interdependence such as the role of small-scale industries and their contribution to employment and industrial growth; the relationship between agriculture and industry; and trade performance according to stages of industrial processing.

**International Comparative Advantage in Manufacturing: Changing Profiles of Resources and Trade (Sales No. E.85.II.B.9 \$17.00)**

This publication deals with the determinants of trading patterns, changes in these patterns and attendant policy implications. Both the empirical analysis and the presentation of data contain several novel features. The analysis rests on a methodological approach which offers a fruitful alternative to traditional methods and is supported by recent extensions in trade theory. A new version of net indicators of revealed comparative advantage is presented in a collection of country tables which provide detailed information on the trade structures of developed and developing countries.

**World Non-Electrical Machinery—An Empirical Study of the Machine-Tool Industry (Sales No. E.83.II.B.5 \$12.00)**

This analysis of long-term trends in production and trade in a number of countries focuses on key aspects of the machine-tool industry, including: the growth of export capacity; lines of product specialization; and the changing competitive abilities of countries.

UNIDO publications may be obtained from book stores and distributors throughout the world or by ordering by title and sales number from one of the following:

**INDUSTRIAL DATA AND RECENT STATISTICAL STUDIES  
PREPARED BY THE INDUSTRIAL STATISTICS AND  
INDUSTRIAL DEVELOPMENT SURVEY SECTION OF THE  
UNITED NATIONS INDUSTRIAL DEVELOPMENT ORGANIZATION**

**Industrial Data in Machine-Readable Form**

UNIDO maintains a data base of industrial statistics which serves as the primary source of information in publications such as the *Industrial Development Survey* and the *Handbook of Industrial Statistics*. The data base is updated annually and copies can be purchased by users outside the Organization. Statistics are compiled for value added, gross output, wages and salaries, employment and production indices. Time series are reported by country for up to 28 industrial branches. All data are annual, beginning in 1963, up to the most recent year for which data are available. Further details may be obtained from the Industrial Statistics and Industrial Development Survey Section, UNIDO, P.O. Box 300, A-1400 Vienna, Austria.

\* \* \* \* \*

**Industrial Statistics for Research Purposes—Methodologies and a Data Inventory of Production Indexes and Base Weights—Volume I (UNIDO/IS.309)**

This study outlines the methods adopted by UNIDO to ensure data consistency and comparability in its international analyses. It describes the methods employed to compensate for missing data as well as the procedures used to reconcile different reporting practices.

**Industrial Statistics for Research Purposes—Volume II (UNIDO/IS.558)**

This study describes the methodologies employed by UNIDO statisticians in the development of the UNIDO data base. The major shortcomings in the data are summarized and the adjustments introduced to compensate for them are discussed. Finally, UNIDO methods for determining data consistency and reliability are outlined. The data involved are principally international statistics on value added, gross output, employment, and wages and salaries.

**The UNIDO Data Base: Primary Sources and Data Base Design (UNIDO/IS.463)**

This study describes the organization of the UNIDO data base. It covers the statistical orientation and priorities accorded to various sources of industrial data—as determined in terms of international, regional or national suppliers—and provides an overview of major shortcomings in the field of industrial statistics. It also summarizes, in general terms, UNIDO's approach to these shortcomings and explains the structure of the UNIDO data base as it has been designed to deal with the various sources, as well as the nature, of the data involved.

**An Inventory of Industrial Statistics: UNIDO Data Base, 1986 (UNIDO/IS.629)**

This study provides details of the coverage and types of data maintained in the UNIDO data base. It deals with 28 industrial branches in the manufacturing sector for the period 1963-1984. It gives an indication of the quality of the available data and notes the exceptions to the United Nations International Standard Industrial Classification of All Economic Activities.

### **L'industrie africaine en chiffres**

**Vol. I—Burundi, Mali (UNIDO/IS.474)**

**Vol. II—République Populaire du Bénin (UNIDO/IS.603)**

**Vol. III—Burkina Faso (UNIDO/IS.612)**

This series is based on previously unpublished industrial statistics, all of which were compiled as part of a special exercise on African industry.

### **Structural Change and Comparative Advantage in Manufacturing: An Overview of Recent Developments in Developed and Developing Countries (UNIDO/IS.625)**

This study assesses recent changes in the structure of manufacturing employment and output in 14 developed countries and an equal number of developing countries. An attempt is made to relate these changes to concomitant changes in comparative advantage of the countries studied. The underlying data on employment, production and trade cover 28 branches of the manufacturing sector between the mid-1970s and the early 1980s.

### **Africa in Figures (forthcoming)**

This study is the second in a series that attempts to provide the latest statistical information on industry in Africa. A detailed statistical description reveals the importance of the manufacturing sector in the African economies. It also provides indicators of production, structural change and consumption within manufacturing. Data are included for up to 24 branches in the manufacturing sector as well as for a large number of more specifically defined manufacturing commodities. Trade statistics for imports and exports of manufactures for selected African countries are also included.

These studies may be obtained, free of charge, by writing to the Industrial Statistics and Industrial Development Survey Section, UNIDO, P.O. Box 300, A-1400 Vienna, Austria.

**OUVRAGES RÉCENTS DESTINÉS A LA VENTE  
PRÉPARÉS PAR LA SECTION DES STATISTIQUES INDUSTRIELLES ET  
DE L'ÉTUDE DU DÉVELOPPEMENT INDUSTRIEL DE L'ORGANISATION  
DES NATIONS UNIES POUR LE DÉVELOPPEMENT INDUSTRIEL**

**L'industrie dans les années 80 : changement structurel et interdépendance** (numéro de vente : F.85.II.B.8; prix : 15,5 dollars).

Cette publication passe en revue les grandes tendances qui affectent le changement structurel dans le secteur manufacturier, l'emploi dans le secteur ainsi que la production, le commerce et la consommation de produits manufacturés. L'accent est mis sur l'interdépendance industrielle telle qu'elle se manifeste tant à l'échelon international qu'à l'intérieur de l'économie des pays. Un certain nombre d'aspects de l'interdépendance sont illustrés par des études consacrées au rôle des petites industries en matière d'emploi et de croissance, aux liens entre l'agriculture et l'industrie ou aux relations entre performance commerciale et degrés de transformation industrielle.

**L'avantage comparé, au plan international, dans l'industrie manufacturière : évolution des profils des ressources et des échanges** (numéro de vente : E.85.II.B.9; prix : 17 dollars).

Cet ouvrage traite des déterminants des schèmes commerciaux, des changements qui affectent ces schèmes et des conséquences qui en découlent en matière de politique économique. Tant l'analyse empirique que la présentation des données présentent des caractéristiques originales. L'analyse se conduit par une méthode nouvelle, fondée sur les récents développements de la théorie du commerce, qui offre une alternative fructueuse aux méthodes habituelles. Une nouvelle version de l'indicateur net de l'avantage comparatif révélé est présentée dans un ensemble de tableaux par pays qui donnent une information détaillée sur les structures du commerce des pays développés et en voie de développement.

**World Non-Electrical Machinery—An Empirical Study on the Machine Tool Industry** (numéro de vente : E.83.II.B.5; prix : 12 dollars).

Analyse des tendances à long terme de la production et du commerce de divers pays axée sur les principaux aspects de l'industrie des machines-outils, notamment : croissance de la capacité d'exportation, spécialisation de la production, évolution des capacités compétitives des pays.

Les publications de l'ONUDI sont en vente dans les librairies et les agences dépositaires du monde entier ou peuvent être obtenues sur commande (en précisant le titre et le numéro de vente) adressée à :

**DONNÉES INDUSTRIELLES ET OUVRAGES RÉCENTS  
DE STATISTIQUES PRÉPARÉS PAR LA SECTION DES STATISTIQUES  
INDUSTRIELLES ET DE L'ÉTUDE DU DÉVELOPPEMENT INDUSTRIEL  
DE L'ORGANISATION DES NATIONS UNIES POUR  
LE DÉVELOPPEMENT INDUSTRIEL**

**Données industrielles sur support magnétique**

L'ONUDI a mis en place une base de données en matière de statistiques industrielles qui constitue la principale source d'information pour l'établissement de publications comme l'*Etude du développement industriel* et le *Manuel de statistiques industrielles*. Les données sont mises à jour chaque année et présentées sur support magnétique. Des copies des bandes peuvent être obtenues à titre onéreux. Les statistiques portent sur la valeur ajoutée, la production brute, les traitements et salaires, l'emploi et les indices de production. Les séries sont présentées par pays pour 28 branches industrielles, et vont jusqu'à la dernière année pour laquelle les données sont disponibles à partir de 1983. Pour plus de détails, s'adresser à la Section des statistiques industrielles et de l'Etude du développement industriel, ONUDI, B.P. 300, A-1400 Vienne (Autriche).

\* \* \* \* \*

**Industrial Statistics for Research Purposes—Methodologies and a Data Inventory of Production Indexes and Base Weights—Volume I (UNIDO/IS.309)**

Etude exposant les méthodes qu'applique l'ONUDI pour assurer la cohésion et la comparabilité des données dans ses analyses internationales ainsi que les méthodes d'estimation utilisées pour compenser l'absence de données et les procédés employés en cas de divergences entre les modes de présentation des informations.

**Industrial Statistics for Research Purposes—Volume II (UNIDO/IS.558)**

Cette étude décrit les méthodes appliquées par les statisticiens de l'ONUDI pour l'élaboration de la base de données de l'Organisation. On y trouve également un aperçu des procédés permettant de déterminer la cohésion et la fiabilité des données, ainsi que des principales insuffisances constatées dans les données et des ajustements effectués pour les pallier. Les données en question sont principalement des statistiques internationales sur la valeur ajoutée, la production brute, l'emploi, et les traitements et salaires.

**The UNIDO Data Base: Primary Sources and Data Base Design (UNIDO/IS.463)**

Cette étude décrit l'organisation de la base de données de l'ONUDI, la nature des données considérées et les sources utilisées, indique l'orientation statistique et la priorité donnée aux diverses sources (fournisseurs internationaux, régionaux et nationaux), et expose les principales lacunes existant dans le domaine des statistiques industrielles ainsi que la méthode adoptée par l'ONUDI pour y remédier.

**An Inventory of Industrial Statistics: UNIDO Data Base, 1986 (UNIDO/IS.629)**

Etude présentant des informations sur la portée et la nature des données incluses dans la base de données de l'ONUDI. Cette étude, qui couvre 28 branches du secteur manufacturier pour la période 1963-1984, fournit des indications sur la qualité des données disponibles et signale les exceptions à la Classification internationale type, par industrie, de toutes les branches d'activité économique.

### **L'industrie africaine en chiffres**

Vol. I : Burundi, Mali (UNIDO/IS.474)

Vol. II : République populaire du Bénin (UNIDO/IS.603)

Vol. III : Burkina Faso (UNIDO/IS.612)

Etudes fondées sur des statistiques industrielles non publiées antérieurement, qui ont toutes été utilisées pour une analyse consacrée à l'industrie africaine.

### **Structural Change and Comparative Advantage in Manufacturing—An Overview of Recent Developments in Developed and Developing Countries (UNIDO/IS.625)**

Cette étude évalue les changements intervenus récemment dans les structures de l'emploi et de la production du secteur manufacturier de quatorze pays développés et d'autant de pays en développement. On y tente d'établir un lien entre les changements structurels et les modifications des avantages comparatifs. Les données sur l'emploi, la production et le commerce utilisées dans cette étude se rapportent à 28 branches manufacturières et couvrent une période allant du milieu des années 70 au début des années 80.

### **Africa in Figures (à paraître)**

Cette étude est le deuxième volume d'une série qui a pour but de publier les informations statistiques les plus récentes sur l'industrie africaine. Une description statistique détaillée situe l'importance du secteur manufacturier dans les économies des pays africains. On y trouve aussi des indicateurs se rapportant au changement structurel dans le secteur manufacturier, ainsi qu'à la production et à la consommation de produits manufacturés. Les données détaillent jusqu'à 24 branches manufacturières ainsi qu'un grand nombre de produits manufacturés définis plus finement. Enfin, on y trouve des statistiques d'importations et d'exportations de produits manufacturés dans certains pays africains.

Les études mentionnées ci-dessus peuvent être obtenues à titre gratuit sur demande écrite adressée à la Section des statistiques industrielles et de l'Etude du développement industriel, ONUDI, B.P. 300, A-1400 Vienne (Autriche).

**كيفية الحصول على منشورات الأمم المتحدة**  
يمكن الحصول على منشورات الأمم المتحدة من المكتبات ودور التوزيع في جميع أنحاء العالم. استلم منها من المكتبة التي تتعامل معها  
أو اكتب إلى: الأمم المتحدة، قسم البيع في نيويورك أو في جنيف.

**如何获取联合国出版物**

联合国出版物在全世界各地的书店和经销处均有发售。请向书店或邮购地址到联合国总部或日内瓦的联合国销售处。

**HOW TO OBTAIN UNITED NATIONS PUBLICATIONS**

United Nations publications may be obtained from bookstores and distributors throughout the world. Consult your bookstore or write to: United Nations, Sales Section, New York or Geneva.

**COMMENT SE PROCURER LES PUBLICATIONS DES NATIONS UNIES**

Les publications des Nations Unies sont en vente dans les librairies et les agences dépositaires du monde entier. Informez-vous auprès de votre libraire ou adressez-vous à : Nations Unies, Section des ventes, New York ou Genève.

**КАК ПОЛУЧИТЬ ИЗДАНИЯ ОРГАНИЗАЦИИ ОБЪЕДИНЕННЫХ НАЦИЙ**

Издания Организации Объединенных Наций можно купить в книжных магазинах и агентствах во всех районах мира. Наводите справки об изданиях в вашем книжном магазине или пишите по адресу: Организация Объединенных Наций, Секция по продаже изданий, Нью-Йорк или Женева.

**COMO CONSEGUIR PUBLICACIONES DE LAS NACIONES UNIDAS**

Las publicaciones de las Naciones Unidas están en venta en librerías y casas distribuidoras en todas partes del mundo. Consulte a su librero o diríjase a: Naciones Unidas, Sección de Ventas, Nueva York o Ginebra.
