## ***Introduction: Knowledge management and the United Nations Industrial Development Organization (UNIDO)***

UNIDO, among its knowledge management activities, has developed a database of industrial information sources in order to search, for its clients, the most appropriate sources of technology and equipment. The database, International Referral System, contains profiles of information providers such as information and documentation centres, banks, training institutes, development agencies and manufacturers' associations that are prepared to provide entrepreneurs in developing countries with tailor-made answers to their industrial needs.

The **World Directory of Industrial Information Sources** is the printed product of this database. With this product, the Information Technology and Knowledge Management Section of UNIDO wishes to share its knowledge and provide its users with a useful instrument for locating sources of information in all industrial sectors.
