AN INVENTORY OF INDUSTRIAL STATISTICS:
UNIDO DATA BASE, 1987*

Prepared by the
Industrial Statistics and Industrial
Development Survey Section
Studies and Research Division

---

* The designations employed and the presentation of material in this document do not imply the expression of any opinion whatsoever on the part of the Secretariat of the United Nations Industrial Development Organization concerning the legal status of any country, city or area or its authorities, or concerning the delimitation of its frontiers or boundaries. This document has been reproduced without formal editing.

CONTENTS

Country tables

Explanatory Notes

The attached print-outs are an inventory of industrial statistics available in the UNIDO data base (UDB), covering the period 1963 to 1985. The UDB was created and is maintained by the Industrial Statistics Section (STAT), Division of Studies and Research. This inventory has been designed for the convenience of users who wish to evaluate quickly the general condition of the data for many applications. Comments and suggestions for its improvement will be greatly appreciated.

For all tables based on the industrial statistics file of the UDB, the following source note is suggested:

"Source: UNIDO data base; information supplied by the Statistical Office of the United Nations, with estimates by the UNIDO secretariat."

A description of the format of the inventory, a general definition of the variables included, and a key to table numbers and symbols used, are provided below. These notes refer specifically to the inventory, and therefore special characteristics of the data are described only where it would be necessary for correct interpretation of the print-outs. Users requiring detailed information on the contents of the industrial statistics data base should contact STAT.

A. Format. Each page summarizes the status of the industrial data for one country. The page is divided into six panels, each showing the availability of statistics concerning the six most commonly used variables (employment, wages and salaries, gross output, value added, gross fixed capital formation and the production indexes) at the 3-digit (branch) level of the International Standard Industrial Classification[1] (ISIC). A column vector shows available data for one year, all ISIC branches and a row vector shows the available time-series for one ISIC branch. Wherever data are available, either an asterisk or a 'C' is placed in the appropriate cell – an asterisk to denote that the data refer only to a single ISIC branch, and a 'C' to denote that data for the branch are combined with data for one or more other branches.[2]

Details on the ISIC location of available data are also supplemented by an indicator of the relative importance of those ISIC branches to which available data refer. Just above the year headings on the panels, a plus sign (+) appears wherever the sum of the 1980 base weights[3] corresponding to

---

1/ International Standard Industrial Classification of All Economic Activities (ST/STAT/SER.M/4 Rev.2), United Nations, 1968.

2/ Within this format, it is not possible to distinguish which of the ISIC branches are combined. However, details on the ISIC composition of each item of data can be supplied, on request. ISIC combinations are also identified in the data base by means of a letter code, and a key to these combination codes is available on request.

3/ The base weights, i.e. value added, 1980, in U.S. dollars, at the 3-digit (branch) level of ISIC, are regarded as the best available indicator of the significance of a particular branch of industrial activity within a country's manufacturing sector.

ISIC branches covered by data exceeds 80 per cent of all the 1980 base weights within the manufacturing sector.

Under the six panels is a summary, by year, of the number of ISIC 3-digit branches (out of a possible 28) that are covered by data for each of the six variables in the industrial statistics file.[4]

3. Definition of variables. Although the data generally conform to the international definitions as recommended by the United Nations,[5] the UDB statistical series for tables 04, 14 and 20 require additional explanation. For each of these tables, the international recommendations recognize alternative definitions, and differences in definition will be reflected numerically in the data. At the same time, the primary purpose for developing the UDB series inventoried here was to store, at a single, machine-readable location, the greatest possible country coverage for each variable at the 3-digit level of ISIC, over the longest possible period of time. In order to achieve this end, certain concessions have had to be made regarding definitional differences, with the result that for the four consolidated tables mentioned above, the data may be mixed.

Consolidation produces some degree of incomparability in the data across countries, but this could be viewed as but one source of data incomparability. A more serious one concerns differences in country practices regarding variations in the coverage of establishments (often the exclusion of small establishments) in industrial inquiries on which the data are based. However, occasionally consolidation also results in incomparability of the data within an individual country over time, and this may present more serious problems for some applications of the data set.[6]

The main features of the consolidation process are as follows:

For table 04, employment, the preferred indicator is the average number of employees, although the number of persons engaged is accepted if it is the only series available. However, if both series are available for some years, selection of one or the other definition is guided by the criterion that consistency of the definition through time is more important than entering data on the number of employees everywhere possible. For this reason, data on the number of persons engaged has sometimes been selected for the consolidated table.

For tables 14 and 20, the variation in definition relates to the valuation of gross output and value added. The coding system of the UDB

4/ Actually, the industrial statistics file in the UDB contains 14 data fields, although only six belong to the "consolidated" subset covered by this inventory. For further discussion of this point, see section B, "Definition of variables".

5/ International Recommendations for Industrial Statistics (ST/STAT/SER.M/48), United Nations, 1968.

6/ Users engaged in analyses for which the numerical effects of this mixing would present a serious limitation on the data's utility are advised that unconsolidated series are also available in the UDB, but of course with more limited time depth and country coverage. For further information, please consult STAT.

distinguishes between two commonly used valuation concepts, producers' prices and factor values. Either valuation is accepted,[1] and as in the case of the employment data, the main criterion for selecting one or the other (when there is a choice) is to assure maximum consistency of the valuation concept within a country, both between variables and through time.

An overview of the country data for each of the four consolidated tables affected by differences in definition is provided in the appendix.

Key to Table Numbers and Symbols Used

Tables:

04	=	Employment (average number of employees or persons engaged).
05	=	Wages and salaries paid to employees, in current national currency.
14	=	Gross output in current national currency (valuation at factor values or producers' values or unknown).
20	=	Value added in current national currency (valuation at factor values or producers' values or unknown).
21	=	Gross fixed capital formation in current national currency.
51	=	Index numbers of industrial production, 1980 = 100.

Symbols:

blank	=	Data are not available.
*	=	Data available at the 3-digit (branch) level of ISIC.
C	=	Data covering this ISIC branch are available but are combined with data for one or more other branches.
+	=	1980 base weight coverage of country data for this table and year exceeds 80 per cent of the base weights for all manufacturing industries.

---

[1]   In cases where the valuation is unknown, the data are also accepted in the consolidation process.
