### EXPLANATORY NOTES

References to dollars (\$) are to United States dollars.

Unless otherwise indicated, growth rates are calculated from the data available for each year of a given period (e.g. 1963-1981), using a semi-log regression over time. Growth rates are expressed in percentages.

Three dots (...) indicate that data are not available or are not separately reported.

A dash ( - ) indicates that an amount is nil or negligible.

The letter x designates the item applicable to a country when several options exist.

A minus (-) sign before a figure denotes a decrease.

An inequality sign (>1 000) refers to growth rates higher than one thousand per cent.

The following abbreviations are used:

CEAO	West African Economic Community
CEPGL	Economic Community of the Great Lakes Countries
ECOWAS	Economic Community of West African States
FAO	Food and Agriculture Organization of the United Nations
GDP	gross domestic product
ISIC	International Standard Industrial Classification of all Economic Activities
LDC	least developed countries
MARIUN	Mano River Union
MVA	manufacturing value added
n.e.s.	not elsewhere specified
SADCC	South African Development Co-operation Council
SITC	Standard International Trade Classification, Revised
UDEAC	Customs and Economic Union of Central Africa
UNIDO	United Nations Industrial Development Organization
UNSO	Statistical Office of the United Nations Secretariat

The cut-off date for all data is 1 September 1988.

## INTRODUCTION

The main purpose of this document is to provide statistical indicators relevant to an international comparison of the process of industrialization in Africa. The interest in such indicators arises in connection with the Industrial Development Decade for Africa. The decade's goals call for new approaches to industrial planning. It stresses the need to assess natural resource and raw material endowments in Africa and to guide industrial development in each country towards activities that will complement, rather than duplicate, industrial developments in other African countries.

The decade's success will ultimately be determined by developments within Africa, since the main responsibility for action lies with the countries themselves. Nevertheless, an important ingredient for this success - and for attaining the necessary degree of co-operation (both regionally and internationally) - is a comprehensive statistical basis assessing progress and the opportunities for co-operation.

Statistical information on manufacturing is, in many African countries, scanty. In several instances, the task of collecting information from the manufacturing establishments is considered as being too costly; instead, countries would rely on imputations. As a result, many of the figures presented here are estimates. A related problem is that the available statistics often lack timeliness. In general, it has been preferred to present figures referring to an earlier year better documented with statistics, rather than to present more up to date figures heavily dependent on imputations.

The conversion of national currencies into US dollars, taken as common numeraire, brings about further problems. Often, the official exchange rate reported by a country is a purely conventional one in the sense that few transactions would actually take place at this rate. More realistic rates must be used if the country is to be given a reasonable proportion in international comparison. However, the selection of a proper exchange rate would require information and analysis which are outside the scope of this publication. In general, national currencies have been converted to dollar equivalents by using official rates of exchange. In several instances, however, unofficial exchange rates proposed by other organizations have been retained. The data used in section 4 have been presented in dollar form by using the exchange rates published in Commodity Trade Statistics (United Nations publication).

Information has been compiled in the form of indicators, e.g. ratios, growth rates and indices that are designed to facilitate international comparisons. The tables comprising this document are organized in four sections. The first three sections provide several indicators on manufacturing production, employment, wages and consumption. The three sections respectively show the tables dealing with the sector as a whole, with the branches and with the products. Section 4 includes indicators of trade in manufactures.

### Sources and methods

The UNIDO data base, on which the document draws, is composed mainly of data communicated to the United Nations by official national sources and published by the Statistical Office of the United Nations Secretariat (UNSO) in the Yearbook of Industrial Statistics. To facilitate the comparability of the data over time and across countries, they have been supplemented from sources that include industrial censuses, statistics supplied by national and international organizations, unpublished data collected in the field by UNIDO as well as estimates by the UNIDO secretariat.<sup>1/</sup>

In section 1, manufacturing value added (MVA) is estimated in accordance with the national accounting concept, which represents the net contribution of the manufacturing sector to gross domestic product (GDP). In section 2, the measure generally used is census output and value added. Thus, the costs of non-industrial services are included, whereas the receipts for these services are excluded.

#### Section 1: The manufacturing sector as a whole

Section 1 comprises tables 1 to 5. It draws heavily on data provided by UNSO. Table 1 shows the distribution of world MVA among economic groupings and developing regions. Economic groupings are defined as follows: "Developing countries" includes the Caribbean area, Central and South America, Africa (other than South Africa), West Asia (other than Israel), and South and East Asia (other than Japan) and developing countries of Europe (Malta and Yugoslavia). "Developed market economies" includes North America (Canada and the United States of America), Europe (other than Eastern Europe, Malta and Yugoslavia), Australia, Israel, Japan, New Zealand and South Africa. "Centrally planned economies" includes Albania, Bulgaria, Czechoslovakia, the German Democratic Republic, Hungary, Poland, Romania, and the Union of the Soviet Socialist Republics. Owing to lack of data, China is not included in world totals.

Table 2 shows the distribution of African MVA among individual countries, subregional groups and economic associations. See appendix I for the country composition of the various groupings.

Table 3 shows the share of income groups in MVA and in population of all African countries. Income groups are defined in terms of the 1978 levels of GDP per capita (at current prices) as follows: low income, less than \$600; middle income, \$600-\$1,320; and high income, more than \$1,320.

Table 4 shows total and per capita MVA at current prices. It also shows growth rates and index numbers of total and per capita MVA derived from data

---

1/ The estimating procedures followed by UNIDO are described in "The UNIDO data base: primary sources and data base design" (UNIDO/IS.463) and "Industrial statistics for research purposes methodology applied in compiling UNIDO's international data on the number of employees, wages and salaries, gross output and value added" (UNIDO/IS.558).

in constant 1980 prices. The data are presented by individual countries and, at the bottom of the table, by selected groupings.

Table 5 shows the percentage shares of MVA in GDP estimated both at constant 1980 prices and at current prices. The data are presented by individual countries and, at the bottom of the table, by selected groupings. The share of MVA in GDP is derived at the level of a grouping by dividing the sum of MVA by the sum of GDP.

## Section 2: The manufacturing branches

Section 2 comprises tables 6 to 9. It focuses on the branches of the manufacturing sector. Branches are defined as major groups of the International Standard Industrial Classification (ISIC),<sup>1/</sup> reported in accordance with a three-digit code. The ISIC definition of manufacturing comprises 28 major groups (that is, 28 branches).

Table 6 shows the share of Africa in world value added of 23 branches. Five branches are omitted from the table because the data is too scanty to ensure comparability between years.

Table 7 shows the branch structure of MVA for Africa and for developing countries. In the case of Africa the data coverage is limited; it includes 23 countries, which in 1980, the best covered year, accounted for 92 per cent of the MVA of all African countries. The sample for developing countries includes 68 countries, which in 1980 accounted for 95 per cent of MVA of all developing countries.

Tables 8 and 9 present data on individual branches arranged in a way that facilitates inter-country comparisons. Information concerning the following branches is excluded: beverages (ISIC 313); tobacco (ISIC 314); petroleum refineries (ISIC 353); and petroleum and coal products (ISIC 354). Production indicators (output, value added) for those four branches are highly sensitive to the valuation method (which may or may not include indirect taxes and subsidies), but because that method is not applied uniformly among countries, international comparison of the branches concerned is not advisable.

Table 8 presents branch growth rates and indices calculated on the basis of industrial production index numbers (1980 = 100). In some cases, original data were provided not in the ISIC three-digit form applicable to a single branch but in a combined form covering several branches. In those cases the index relating to the combination has been applied to each component branch. In addition to the data shown for individual countries, growth rates and indices are also presented for Africa as a whole. Using 1980 base weights, the individual country data have been aggregated to form value-added estimates of branches. Following data availability, the number of countries varies widely from branch to branch. The growth rates have been calculated over several periods, some of which end in 1985. Where data for 1985 were not available, the growth rates were calculated for the respective periods ending in 1984 or 1983. The branches plastic products (ISIC 356), professional and scientific equipment (ISIC 385), and other manufactures (ISIC 390) were excluded from presentation in table 8 due to lack of sufficient information.

---

<sup>1/</sup> International Standard Industrial Classification of All Economic Activities, (United Nations publication, Sales No. E.68.XVII.8).

Table 9 presents indicators that are characteristic of the manufacturing branches in various countries. Those indicators are derived from data on value added, output, wages (all at current prices) and employment. Since several series are involved, the closest year common to all variables has been selected as the reference year.

The term wages refers to wages and salaries. It should include all payments, in cash or in kind, made to employees in return for work done.

Appendix II to this Introduction provides notes on certain aspects of the data. A considerably amplified version of the notes is given in the Yearbook of Industrial Statistics, which also covers deviations from the standards applied. In general, the notes are also applicable to the estimates that supplement the Yearbook data. Exceptions include some estimates that are based on manufacturing censuses and whose coverage, therefore, is different from those published in the Yearbook, which are based on information derived from annual inquiries and national account calculations.

Due to lack of sufficient information the branch other manufactures (ISIC 390) was excluded from presentation in table 9.

### Section 3: The manufactured products

Section 3 consists of table 10, which presents indicators of apparent consumption (production plus imports less exports) at the most detailed level of product specification possible given the basic data available. The indicators are derived from the data or estimates available for 60 products during two periods, 1975-1977 and 1983-1985. The primary sources of data included the following United Nations publications: Yearbook of Industrial Statistics, vol. II, Commodity Production Statistics; Commodity Trade Statistics, Series D; and Yearbook of International Trade Statistics. The supply-utilization account tapes of the Food and Agriculture Organization of the United Nations (FAO) were used, as were United Nations energy, trade and commodity production tapes. Supplementary data were drawn from various statistical and industrial publications.

The first step in estimating apparent consumption is to achieve a concordance between data of ISIC and those of the Standard International Trade Classification (SITC).<sup>1/</sup> Production data are reported in the Yearbook of Industrial Statistics, vol. II, at a six-digit level of specification that allows for a rather close concordance with SITC; however, even at that level of disaggregation, a simple one-to-one comparison between the two classifications cannot be made for a number of products. Consequently, in order to arrive at a homogeneous definition of trade and production in the equation of apparent consumption, it has sometimes been necessary to combine items in one classification, or even in both.

All estimates of apparent consumption have been made in terms of physical units. Some difficulty was experienced, however, because of the need to express the trade and production figures in common units of measurement.

---

1/ Standard International Trade Classification (United Nations publication, Sales No. E.61.XVII.6).

Reporting countries are not always consistent in that respect. For instance, trade data may be reported in metric tons and the relevant production statistics in cubic metres. Moreover, a country may, from one year to the next, change the unit of measurement used in compiling its trade statistics. In such cases, the conversion factors used by the United Nations (in, for example, the Yearbook of Industrial Statistics, vol. II) have been used.

In order to obtain an accurate picture of apparent consumption it is important to note those cases where there is no domestic production and consumption is met entirely through imports. The lack of production statistics, however, does not always permit a distinction between instances where production is non-existent or negligible and instances where it does exist, but is not reported. If both situations were treated in the same manner, the result would be occasional underestimation of consumption levels for countries that provide data on imports and produce domestically, but do not report their production. In order to safeguard against such a result, various sources, including the Yearbook of Industrial Statistics, vol. I, and journals and statistical reports concerning the industry in question were consulted. When the latter failed to indicate any domestic production, a further check was made through trade sources. There is always the possibility of confusion resulting from the re-export of goods, but in general, exports of a given product should be zero when there is no domestic production. Consequently, the assumption of zero domestic production in any country has been tested against existing data for the product concerned, including not only the export data of the country itself, but also the import data of potential trading partners. The latter check helps in dealing with instances of non-reported exports.

A further problem occurs when a country does not report any trade at all. To safeguard against the erroneous conclusion that no trade took place, when it may simply not have been reported, the data for all countries potentially trading with the one in question have been examined. Where evidence of trade has been noted, the data reported by the trading partners have been summed up in order to obtain an estimate of the volume of non-reported trade. Thus, the imports (exports) of the world from (to) a given country are regarded as that country's exports (imports) to (from) the world.

Where trade data were reported only in value terms, UNIDO has endeavoured to produce estimates in volume terms, using two methods. The first one applies when data for one or two years of the three-year period under consideration are available in terms of both volume and value. In that case, the average number of physical units per unit of value have been applied to all three years. The second method applies when a country has provided no data, in volume terms, for any year of a period, but when one of its trading partners has provided such data, as well as data in value terms, on its imports from the country concerned. In such cases, a unit value coefficient has been calculated and applied, as in the first method.

#### Section 4: Trade in manufactures

UNSO is the source of the trade data used in section 4. Data on output in manufacturing are from the UNIDO data base.

The products included in trade in manufactures are defined as those items of the SITC (a commodity classification) that correspond to the manufactured

goods listed in Major Division 3 of the ISIC (an activity classification). These manufactured goods are classified in four end-use categories. Appendix III to this Introduction lists the SITC items that correspond to ISIC manufactured goods and classifies them by final use.

Only the countries that provided data at the level of disaggregation required to fit into the setting of appendix III over the time periods under consideration are included in section 4. All the indicators included in this section are based on data expressed in current dollar terms.

Table 11 shows the average annual growth rates of manufactured and total exports and imports, by country, over periods that range from 1975 to the latest year for which data were available. These averages have been obtained as geometric means. The percentage shares of manufactures in total exports and in total imports are shown in the form of arithmetic means of the annual shares over periods of one to three years ending in the latest year for which information could be obtained.

In table 12 selected indicators of trade in manufactures are presented for each country for 1975 and the latest year for which data were available within the period 1983-1985. These indicators cover per capita exports and imports of manufactures; the shares of exports in output and of imports in apparent consumption; and the ratio of net exports to the sum of exports and imports of manufactures.

Finally, table 13 presents the percentage distribution of manufactured exports and imports, by country, across the four end-use categories. This structure is shown in the form of three-year arithmetic averages of annual shares for the reference periods which are 1974-1976 and 1983-1985. However, for countries where data were not available for the years 1983-1985 the latter period refers to the latest year(s) for which information could be obtained.

Appendix III

DEFINITION AND CLASSIFICATION BY END-USE OF TRADE IN MANUFACTURES

SITC code	Description
<u>Mainly consumer non-durables</u>	
541	Medicinal and pharmaceutical products
61	Leather, leather manufactures etc.
666	Pottery
821	Furniture
831	Travel goods, handbags etc.
84	Clothing
8.1	Footwear
89	Miscellaneous manufactured articles, n.e.s.
less: 896	less: works of art, collectors' pieces etc.
<u>Mainly supplies and intermediates</u>	
231	Crude rubber (including synthetic and reclaimed)
less: 231.1	less: natural rubber and similar natural gums
243	Wood, shaped or simply worked
251	Pulp and waste paper
262.6	Wool shoddy
262.7	Wool or other animal hair, carded or combed
252.8	Wool tops
262.9	Waste of wool and other animal hair, n.e.s.
263	Cotton
266	Synthetic and regenerated (artificial) fibres
267	Waste materials from textile fabrics
51	Chemical elements and compounds
521	Mineral tar etc.
53	Dyeing, tanning and colouring materials
55	Essential oils and perfume materials
561	Manufactured fertilizers
571	Explosives and pyrotechnic products
581	Plastic materials etc.
599	Chemical materials and products, n.e.s.
62	Rubber manufactures, n.e.s.
63	Wood and cork manufactures
64	Paper, paperboard and manufactures thereof
65	Textile yarns, fabrics, made-up articles etc.
661	Lime, cement etc.

SITC code	Description
662	Clay construction materials etc.
663	Mineral manufactures, n.e.s.
664	Glass
665	Glassware
67	Iron and steel
68	Non-ferrous metals
<u>Mainly capital goods and consumer durables</u>	
69	Manufactures of metal, n.e.s.
7	Machinery and transport equipment
812	Sanitary, plumbing, heating fixtures etc.
86	Professional, scientific and controlling instruments
less: 863	less: developed cinematographic film
<u>Other manufactures</u>	
01	Meat and meat preparations
02	Dairy products and eggs
032	Fish, in airtight containers, n.e.s. and fish preparations
042.2	Rice, glazed or polished
046	Meal and flour of wheat or of meslin
047	Meal and flour of cereals other than 046
048	Cereal preparations etc.
052	Dried fruit
053	Fruit, preserved and fruit preparations
055	Vegetables, roots and tubers, preserved or prepared
06	Sugar, sugar preparations and honey
071.3	Coffee extracts, essences etc.
072.2	Cocoa powder, unsweetened
072.3	Cocoa butter and cocoa paste
073	Chocolate etc.
074	Tea and maté
081	Feeding-stuff for animals
09	Miscellaneous food preparations
11	Beverages
122	Tobacco manufactures
221.9	Flour and meal of oil-seeds etc.
332	Petroleum products
4	Animal and vegetable oils and fats
