LIST OF TABLES AND ANNEXURES

	<u>Pages</u>
Table I - National Demand of Çorum Product-Mix -October '83 -----	7
Table II - Summary of National Demand according to manufacturing characteristics -----	8
Table III - Demand/Capacity balance -----	9
Table IV - National Demand of Çorum Product-mix - December '83 -----	10
Table V - Capacity of Plate Fabricated Equipment Manufacture -----	11-13
Ann. I - Sample, Code for Plate Fabricated Equipment (SITC Code 69211) -----	14
Ann. II - Industry wise demand for fabricated equipment as per parameters of manufacturing characteristics -----	15-23
Ann. III - National totals of demand for fabricated equipment as per parameters of manufacturing characteristics -----	24-28

UNITED NATIONS DEVELOPMENT PROGRAMME IN TURKEY
UNIDO-CAPITAL GOODS DEVELOPMENT PROJECT IN TURKEY

PAGE 2

- 1.6. This study was conducted by Mr. Hasan Yilmaz, SPO expert, under the direction of Mr. M.M. Luther, Chief Technical Adviser, Capital Goods Development Project.
- 1.7. The project management is grateful to MKEK General Manager Mr. Akin Cakmakci, now Undersecretary, Ministry of Industry and Technology, Mr. Gunay Gungen, deputy General Manager of MKEK who made themselves available for discussions at different stages of the study.
- 1.8. Mr. Vahit Erden, National Project Coordinator of the Capital Goods Project and Head, Sectoral Planning Division, SPO, Mrs. Nimet Ipek and Mr. Fatih Ozatay, experts, SPO, were continuously associated with the study.

31.12.83
M.M. LUTHER,
C.ENG., F.I.MECH.E. (LOND) F.I.PROD.E. (LOND),
CHIEF TECHNICAL ADVISER,
CAPITAL GOODS PROJECT IN TURKEY.

2.2. The demand for these items as conceived in the feasibility reports is expected to arise from AZOT Sanayi, SEKA, PETKIM, CIMENTO,SEKER FABRIKASI, ETIBANK and TICI. The future demand of capital goods of all these enterprises has been studied by the Capital Goods Development Project and recently updated on the basis of projections by SPO in the context of preparation of the 5th. Five Year Development Plan. The national demand of the proposal product-mix of Çorum factory is given in Table I.

2.3. PLATE FABRICATED EQUIPMENT

2.3.1. Demand of each enterprise for these items has been analysed by CGDP on the basis of the permutation of 12th., 13th., and 14th. digits of the corresponding 15 digit code evolved by CGDP on the basis of SITC code. Annexure I gives a typical 15 digit code for plate fabricated equipment. Annexure II gives permutation of weight, material thickness of plate-fabricated items in MKEK's proposed product-mix according to enterprises. Annexure III gives classification of the permutation results according to each 5 digit SITC code. A summary is in Table II.

2.3.2. As in the original feasibility report of MKEK, this detailed analysis does not cover the demand of TEK.

2.3.3. The total demand, yearly average demand between 1985-1994 and demand/capacity balance for MKEK's proposed Çorum plant product-mix is given in Table III.

2.3.4. A statement of capacity for steel fabrication at present available in public and private sectors including Gerkonsan is in Table VI.

2.3.5. In view of the large capacity for this type of work already available it is recommended that MKEK should give up its plans for manufacture of plate fabricated equipment, namely condensers, equipment for cellulose pulp, heat exchangers, heating and cooling equipments, dryers, reaction vessels, filtering equipment for liquids.

2.3.6. This data is being supplied to Gerkonsan, which is being set up for a capacity of 10.000 tonnes of technological structures of the type of items foreseen by MKEK for its proposed Corum plant. It is recommended that Gerkonsan should make a further study of its planned capacity considering the weight, material and the thickness of the items covered in this report. This should cover in particular limiting factors of production capacity such as capacity of cranes, bending machines, guillotines. e.t.c.

2.4. MACHINERY

2.4.1. The five items considered by MKEK (Paper making machinery screens and classifiers, curshers and grinding mills, compressors and gearboxes) require different kinds of facilities considering their range of weight and complexity as well as manufacturing operations. Some capacity is already available in public sector units for manufacture of these items not only in existing plants of MKEK but also in plants of SEKER MAKINA FABRIKASI and private sector units.

2.4.2. Considering this as well as the facts that

(i) the total demand is limited

(ii) a large part of the future demand is expected upto 1990 by which time any factories planned now will barely reach optimum capacity.

(iii) the sizes and specifications of the items have not yet been determined, it is felt that existing units in public and private sector should be encouraged to fill the gap between demand and capacity.

- 2.4.3. It is recommended that paper-making machinery and screens and classifiers should in any case, be taken up by Seker Makina Fabrikasi while crushers and grinders should be included in the product-mix of the proposed new plant at Polatli for manufacture of earth moving machinery.
- 2.4.4. Now that national demands with detailed specifications as coded by the Capital Goods Development Programme are available a comparison of the figures as previously computed and these latest projections is at Table IV. The revised figures, however, do not change the conclusions.

TABLE I

NATIONAL DEMAND (in tonnes) OF CORUM PRODUCT-MIX - OCTOBER 1983

ITEMS	1985	1986	1987	1988	1989	1990	1991	1992	1993	1994	1995	1996	1997	1998	1999	2000
