Appendix I - Definition of variables	196

Explanatory Notes

The attached print-outs are an inventory of industrial statistics available in the UNIDO data base (UDB), covering the period 1963 to 1988. The UDB was created and is maintained by the Industrial Statistics and Sectoral Surveys Branch (STAT), Industrial Policies and Perspectives Division. This inventory has been designed for the convenience of users who wish to evaluate quickly the general condition of the data for many applications. Comments and suggestions for its improvement will be greatly appreciated.

For all tables based on the industrial statistics file of the UDB, the following source note is suggested:

"Source: UNIDO data base; information supplied by the Statistical Office of the United Nations, with estimates by the UNIDO secretariat."

A description of the format of the inventory, a general definition of the variables included, and a key to table numbers and symbols used, are provided below. These notes refer specifically to the inventory, and therefore special characteristics of the data are described only where it would be necessary for correct interpretation of the print-outs. Users requiring detailed information on the contents of the industrial statistics data base should contact STAT.

A. Format. For every country the status of the industrial data is summarized on at least one page. This page is divided into six panels, each showing the availability of statistics concerning the six most commonly used variables (employment, wages and salaries, gross output, value added, gross fixed capital formation and the production indexes) at the 3-digit (branch) level of the International Standard Industrial Classification^{1/} (ISIC). A column vector shows available data for one year, all ISIC branches and a row vector shows the available time-series for one ISIC branch. Wherever data are available, either an asterisk or a 'C' is placed in the appropriate cell - an asterisk to denote that the data refer only to a single ISIC branch, and a 'C' to denote that data for the branch are combined with data for one or more other branches.^{2/}

Just above the year headings on the panels, the character 'D' appears wherever data at more detail, i.e. at 4-digit level of ISIC, is also available. In that case the availability of these detailed statistics concerning employment, wages and salaries, gross output and value added is shown on the subsequent page.

1/ International Standard Industrial Classification of All Economic Activities (ST/STAT/SER.M/4 Rev.2), United Nations, 1968.

2/ Within this format, it is not possible to distinguish which of the ISIC branches are combined. However, details on the ISIC composition of each item of data can be supplied, on request. ISIC combinations are also identified in the data base by means of a letter code, and a key to these combination codes is available on request.

3. Definition of variables. Although the data generally conform to the international definitions as recommended by the United Nations,^{1/} the UDB statistical series for tables 04, 14 and 20 require additional explanation. For each of these tables, the international recommendations recognize alternative definitions, and differences in definition will be reflected numerically in the data. At the same time, the primary purpose for developing the UDB series inventoried here was to store, at a single, machine-readable location, the greatest possible country coverage for each variable at the 3-digit level of ISIC, over the longest possible period of time. In order to achieve this end, certain concessions have had to be made regarding definitional differences, with the result that for the four consolidated tables mentioned above, the data may be mixed.

Consolidation produces some degree of incomparability in the data across countries, but this could be viewed as but one source of data incomparability. A more serious one concerns differences in country practices regarding variations in the coverage of establishments (often the exclusion of small establishments) in industrial inquiries on which the data are based. However, occasionally consolidation also results in incomparability of the data within an individual country over time, and this may present more serious problems for some applications of the data set.^{2/}

The main features of the consolidation process are as follows:

For table 04, employment, the preferred indicator is the average number of employees, although the number of persons engaged is accepted if it is the only series available. However, if both series are available for some years, selection of one or the other definition is guided by the criterion that consistency of the definition through time is more important than entering data on the number of employees everywhere possible. For this reason, data on the number of persons engaged has sometimes been selected for the consolidated table.

1/ International Recommendations for Industrial Statistics
(ST/STAT/SER.M/48), United Nations, 1968.

2/ Users engaged in analyses for which the numerical effects of this mixing would present a serious limitation on the data's utility are advised that unconsolidated series are also available in the UDB, but of course with more limited time depth and country coverage. For further information, please consult STAT.

For tables 14 and 20, the variation in definition relates to the valuation of gross output and value added. The coding system of the UDB distinguishes between two commonly used valuation concepts, producers' prices and factor values. Either valuation is accepted,^{1/} and as in the case of the employment data, the main criterion for selecting one or the other (when there is a choice) is to assure maximum consistency of the valuation concept within a country, both between variables and through time.

An overview of the country data for each of the four consolidated tables affected by differences in definition is provided in the appendix.

Key to Table Numbers and Symbols Used

Tables:

- 04 = Employment (average number of employees or persons engaged).
- 05 = Wages and salaries paid to employees, in current national currency.
- 14 = Gross output in current national currency (valuation at factor values or producers' values or unknown).
- 20 = Value added in current national currency (valuation at factor values or producers' values or unknown).
- 21 = Gross fixed capital formation current national currency.
- 51 = Index numbers of industrial production, 1980 = 100.

Symbols:

- blank = Data are not available.
- * = Data available at the 3-digit (or 4-digit) level of ISIC.
- C = Data covering this ISIC are available but are combined with data for one or more other ISICs.
- D = Detailed statistics (i.e. at 4-digit level of ISIC) are also available for this table and year.

^{1/} In cases where the valuation is unknown, the data are also accepted in the consolidation process.

Dissemination of UNIDO's Industrial Statistics Data Base

Since 1984, UNIDO has been making available to researchers outside the United Nations system its data base of industrial statistics. The data is sold on magnetic tape or diskettes at the following rates:

	Secondary disseminators (e.g. commercial firms) \$	Universities, research institutions, government agencies \$
<u>Tape</u> (entire data base) ^{1/}		
First buyer	2,000	500
Subsequent yearly updates ^{2/}	600	250
<u>Diskette(s)</u> ^{3/}		
First buyer (entire data base)	2,400	600
Subsequent yearly updates ^{2/}	600	200
Subsets of data base (per single-industry/country)	100	35

All buyers, except secondary disseminators, are enjoined from transferring copies of this tape to users outside their respective institution or firm. Payment should be made in advance through bank draft or cheque in favour of UNIDO, or through a direct bank deposit to UNIDO, Creditanstalt Bankverein US dollar account no. 29-05115. Payments should be forwarded to the Industrial Statistics and Sectoral Surveys Branch, UNIDO, Box 300, A-1400 Vienna, Austria. Purpose of payment and account code number UN 552-02-04 should be indicated.

The following is a brief description of the data base. More detailed information can be found in the document UNIDO Data Base: Primary Sources and Data Base Design, available on request.

Objectives and Purpose: In the development of the data base, which was set up in 1979 to meet the needs of economists and other researchers in UNIDO, first priority was to meet requirements arising in connection with multinational, or cross-country, studies. Thus, much of the work has been to develop a set of data which is comparable and consistent, both between countries and over time. Statisticians have given particular attention to the need to reconcile differences in national statistical practices such as different classifications and definitions employed and variations in the scope and coverage of the data.

- 1/ On request, the data can be dispatched by special courier at the following rates:
Tape: Europe \$32, USA and Canada \$47, all other destinations \$50.
Diskette: Europe \$23, USA and Canada \$28, all other destinations \$36.
- 2/ Special rate applies to buyers of entire data base.
- 3/ 5 1/4 or 3 1/2 inch IBM PC or compatible.

The methods used and the extent to which comparability and consistency have been achieved to date are documented in a UNIDO publication.^{1/}

Sources of Information: Four major sources have been used in compiling and cleaning the data contained in the UNIDO data base. First, data on industry reported in country questionnaires are incorporated. The second major source of information is national publications - industrial censuses, annual surveys and input-output tables. Over 1,000 such publications have been collected by UNIDO during the course of the project. Third, international sources, both published and unpublished, have been used. Finally, a fourth source has been national data compiled by statisticians engaged by UNIDO to work in specific countries.

Updating and Maintenance of the Data Base: The Industrial Statistics and Sectoral Surveys Branch maintains and updates the data annually as part of its responsibility to service UNIDO users. Future tapes will include data for an additional year as well as revisions, corrections and extensions in coverage which may include observations for earlier years dating back as far as 1963.

Tape Characteristics: Tapes will use blocked fixed-length record format, one record per ISIC. Users may, however, specify a maximum block size and choose from the following physical characteristics:

Labels = No label/IBM OS Standard
Code = EBCDIC/ASCII
Density = 1600/6250 BPI 9 tracks
