for a sustainable future

OCCASION

This publication has been made available to the public on the occasion of the 50th anniversary of the United Nations Industrial Development Organisation.

TOGETHER
for a sustainable future

DISCLAIMER

This document has been produced without formal United Nations editing. The designations employed and the presentation of the material in this document do not imply the expression of any opinion whatsoever on the part of the Secretariat of the United Nations Industrial Development Organization (UNIDO) concerning the legal status of any country, territory, city or area or of its authorities, or concerning the delimitation of its frontiers or boundaries, or its economic system or degree of development. Designations such as “developed”, “industrialized” and “developing” are intended for statistical convenience and do not necessarily express a judgment about the stage reached by a particular country or area in the development process. Mention of firm names or commercial products does not constitute an endorsement by UNIDO.

03 MAY 1991

BUENOS AIRES, April 26, 1991

Mr. Kohomen, M.
Acting Chief, Contracts Sections
General Services Division
Department of Administration
UNIDO, P.O. Box 300
A 1400 Vienna, Austria

Dr. Mr. Kohomen:

We are glad to submit the report about the course: Protein and Peptide Purification, Microsequencing, Biotechnological Applications.

It was held as per the program and schedule submitted.

Dr. Michel W. Hunkapiller was not able to participate and due to the very short notice it was not possible to find a suitable substitute.

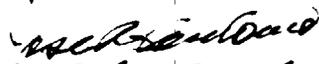

We should like to point out the great value of the contribution given by Professors Hellman, Wernsterdt and Asenjo.

The above also applies to the local professors and assistant professors.

In the selection of participants we endeavoured to bring representatives from as many as possible Latin American countries, as well as, from various Argentine regions. In all cases it was ascertained that the participants were to apply the knowledge and techniques to be acquired during the course, in their future research.

Dr. Alejandro C. Paladini

Sincerely,

Dr. José A. Santomé

Experimental Work

It consisted of daily individual practice for 6 hours and participants were trained in the following techniques:

- HPLC in its different modes: reverse phase, ionic exchange, size exclusion. Microbore and narrowbore columns.
- Two - aqueous - phase partition.
- Polyacrylamide gel electrophoresis.
- SDS - polyacrylamide gel electrophoresis.
- High density polyacrylamide gel electrophoresis. Staining methods: Coomassie Brilliant Blue, silver, protein identification through its enzymatic activity.
- Isoelectrofocusing.
- Transfer of proteins to immobilizing membranes.
- Isolation of gel band material in order to analyze its sequence.
- Automatic microsequencing.
- Separation of amino acid phenylthiohydantoins by reverse phase HPLC.
- Amino acid analysis

Evaluation

At the end of the course the participants presented their plans to apply the knowledge acquired and their statements and answers to questions were evaluated.
