ASEAN INDUSTRY IN FIGURES

Prepared by the
Industrial Policy and Perspectives Division

5

The designations employed and the presentation of the material in this document do not imply the expression of any opinion whatsoever on the part of the Secretariat of the United Nations Industrial Development Organization concerning the legal status of any country, territory, city or area or of its authorities, or concerning the delimitation of its frontiers or boundaries. This document has not been edited.

Explanatory notes

Unless otherwise indicated, "manufacturing" includes the industry groups listed under major division 3 in the International Standard Industrial Classification of All Economic Activities (United Nations publication, Sales No. E.68.XVII.8).

International Standard Industrial Classification of All Economic Activities (ISIC) code numbers are accompanied by a descriptive title (for example, ISIC 323: "Manufacture of leather and products of leather, leather substitutes and fur, except footwear and wearing apparel"). For considerations of space, however, the description is sometimes shortened (that is, ISIC 323 may be described simply as "Leather and fur product"). For the same reason, the descriptive titles of code numbers of the Standard International Trade Classification (United Nations publication, Sales No. E.61.XVII.6) and the names of countries and country groups are sometimes shortened.

The German Democratic Republic and the Federal Republic of Germany with effect from 3 October 1990, have united to form one sovereign state. The People's Democratic Republic of Yemen and the Yemen Arab Republic were merged into a single sovereign state called the Republic of Yemen on 22 May 1990. The data presented in this publication relate to periods before 1990 and thus refer to these four countries separately.

References to dollars (\$) are to United States dollars. For production and wages data, national currencies have been converted to dollar equivalents by using exchange rates as published in International Financial Statistics (International Monetary Fund publication). The data on international trade have been presented in dollar terms by using the exchange rates published in Commodity Trade Statistics (United Nations publication).

Data converted to dollars by using current exchange rates are of course influenced by fluctuations in exchange rates. Annual variations of data converted in that manner may not reflect movements in the national currency data.

Periods set off by a hyphen (for instance, 1980-1989) include the beginning and end years.

Apparent arithmetical discrepancies, such as percentages that do not add up to totals, result from the rounding of basic data or figures known to different degrees of precision.

Three dots (...) indicate that data are not available or are not separately reported.

Two dots (..) indicate that data are not applicable.

A dash (-) indicates that an amount is nil or negligible.

The letter "x" designates the item applicable to a country when several options exist.

The following abbreviations are used:

| | |
|--------|---|
| ASEAN | Association of South-East Asian Nations |
| DGs | developing countries |
| DEM | dynamic exporters of manufactures as a subgroup of developing countries |
| EC | European Community |
| GDP | gross domestic product |
| ILO | International Labour Office |
| ISIC | International Standard Industrial Classification of All Economic Activities |
| MVA | manufacturing value added |
| n.e.c. | not elsewhere classified |
| n.e.s. | not elsewhere specified |
| OECD | Organization for Economic Co-operation and Development |
| RCA | revealed comparative advantage |
| R & D | research and development |
| SITC | Standard International Trade Classification, Revised |
| UNIDO | United Nations Industrial Development Organization |
| UNSO | Statistical Office of the United Nations Secretariat |

| 34. Annual direct foreign investment ASEAN countries, in current dollars | 90 |

INTRODUCTION

The present publication "ASEAN Industry in Figures" focuses on the member countries of the Association of South East Asian Nations (ASEAN). ASEAN includes the following countries: Brunei Darussalam, Indonesia, Malaysia, the Philippines, Singapore and Thailand. In this publication, however, Brunei Darussalam could not be taken into account due to the scarcity of data. All five remaining countries belong to a group of developing countries that have recorded extraordinarily high rates of growth for manufactured exports over the 1970s¹. In this publication this group will be referred to as dynamic exporters of manufactures (DEM).

During the past two decades the member countries of the ASEAN achieved remarkable industrial growth and their economies underwent deep structural changes. The purpose of the present publication is to provide statistical indicators describing these processes. Data are presented for ASEAN countries as a group, for individual ASEAN countries and for other selected country groups and countries in order to facilitate comparison.

While relying largely on readily available data - particularly data compiled by the Statistical Office of the United Nations Secretariat (UNSO) - the presentation of data in ASEAN Industry in Figures is original in three ways. First, the basic data have been accumulated from several sources and have been combined to form indicators such as ratios, growth rates and indices. Second, many of the indicators presented are derived from estimates made by UNIDO to supplement missing data. Third, trade data have been aggregated to make them comparable to production data, the aggregation is described under Sources and methods.

Sources and methods

The source of industrial statistics is the UNIDO database which is composed mainly of data communicated to the United Nations by official national sources and published by UNSO in the Yearbook of Industrial Statistics. To facilitate the comparability of data over time and across countries, they have been supplemented from sources that include industrial censuses, statistics supplied by national and international organizations, as well as estimates by the UNIDO secretariat.²

Manufacturing value added (MVA) is estimated i. accordance with the national accounting concept, which represents the net contribution of the manufacturing sector to gross domestic product (GDP). Value added by manufacturing branch and its total (ISIC 3) are taken from the UNIDO database.

¹Industry in the 1980s, Structural Change and Interdependence, UNIDO, ID/331, 1985, p.4.

²The estimation procedures followed by UNIDO are described in "The UNIDO data base: primary sources and data base design" (UNIDO/IS.463) and "Industrial Statistics for research purposes - methodology applied in the development and maintenance of the UNIDO Industrial Statistics Data Base" (UNIDO/PPD.192).

Data on employment come from the ILO Yearbook of Labour Statistics, various volumes, while data on manufacturing employment are taken from the UNIDO database.

The source of the trade data used in this publication is the United Nations trade tapes. In order to be able to present trade data comparable to production data, trade data following the Standard International Trade Classification, Revised (SITC) are reclassified in accordance with the four-digit code of the International Standard Industrial Classification (ISIC), by employing a concordance developed by the Organization for Economic Co-operation and Development (OECD) and, where required, these data are aggregated into the three-digit code of ISIC.

Appendix I to the present introduction gives the groupings of countries as used in this publication. Due to insufficient data, China could not be included in any country grouping or world totals. As a trading partner of the ASEAN countries, data for China are, however, shown in table 22.

Appendix II to this introduction lists the SITC items that correspond to ISIC manufactured goods and classifies them by final use, as well as by research-and-development-intensity (R & D intensity).

Trade figures are presented in this publication in current dollars, national accounts data are shown in constant 1980 dollars. The industrial statistics are presented partly in current and partly in constant dollars.

Average annual growth rates for national accounts data are calculated from the data available for each year of a given period (for example, 1980-1989), using a semi-log regression over time. For industrial statistics and trade data average annual growth rates are calculated as compound growth rates from the first and last years of a period. All growth rates are expressed in percentages.

Trade data not reported by a country are estimated from data reported by trading partners. Due to incomplete reporting from trading partners this is likely to bring about an underestimation, particularly in recent years.

The tables and figures

Tables 1 and 2 show the distribution of GDP by sector of origin for selected country groups and the ASEAN countries respectively. Instead of using data on GDP as a whole GDP is calculated as the sum of the sectoral components.

Table 3 shows the shares of selected country groups in world MVA and in world manufactured exports.

Table 4 shows the GDP per capita and MVA per capita and the average annual growth rates of the per capita data for the ASEAN countries and selected country groups in constant 1980 dollars.

Table 5 shows the shares of the ASEAN countries and selected developing countries from South and East Asia in the total MVA for the developing countries of this region.

Table 6 shows the growth in both total and manufacturing employment for the ASEAN countries, selected country groups and Japan.

Table 7 lists the share of manufacturing in GDP and GDP per capita to show the structural transformation during the period 1965 to 1989 for the ASEAN and selected Asian developing countries. Although for the ASEAN countries these figures are given in tables 2 and 4, they are repeated here and supplemented with data for additional years in order to facilitate a comparison with the selected Asian developing countries.

Figure 1 which is based on the data presented in table 7 shows the patterns of structural transformation with 1965 and 1989 as end points. The data are presented in semi-log form.

Tables 8 and 9 give the ratios of commodity exports and imports (SITC 0-9) to GDP and manufactured exports and imports (SITC 5 to 8, less 68) to total commodity exports and imports for selected countries and country groups and the ASEAN countries respectively.

Table 10 shows the value indices (1981=100), i.e. based on current dollars, of production, imports and exports for selected manufacturing industries defined at the four-digit level of ISIC for the ASEAN countries. The selection of industries was based on a high growth in current values of either production, imports or exports for at least one of the ASEAN countries. Indices were chosen to show the magnitude of growth or decline for the individual ASEAN countries. Since Thailand does not report production data at the four-digit level, Thailand could not be included in this table.

Figure 2 presents in graph form the development of production, imports and exports in current values on the same scale per industry for selected ASEAN countries.

Tables 11 and 12 show the percentage distribution of MVA among the 28 manufacturing branches (i.e. the 28 major groups within division 3 of ISIC), for selected country groups and Japan and for the ASEAN countries, respectively.

It should be noted that some indicators for the Philippines, i.e. distribution of value added among the manufacturing branches (table 12) and the indices of relative specialization (table 15) as well as manufacturing employment by branch (table 16) for the period after 1980, although shown, are not comparable to the earlier period. Up to 1983 the Philippines included data on establishments with one or more persons engaged, as of 1983 only those with more than 10 persons engaged and as of 1987 data for establishments with average monthly sales or receipts of not less than 1 million pesos are included.

Tables 13 and 14 show yearly compound growth rates of value added for the 28 manufacturing branches for selected country groups and Japan and for the ASEAN countries respectively. For the Philippines growth rates for the period after 1980 could not be shown, since data are not comparable to the earlier period, due to changes in data coverage.

Table 15 shows the relative specialization in manufacturing for the ASEAN countries using the formula:

$$((VA_i/VA_{300})_j)/((VA_i)/(VA_{300})_w)$$

where VA_i = value added in branch i , VA_{300} = value added in total manufacturing and subscripts j and w denote country j and world respectively. A figure close to 1.00 means that the branch's importance in a country's manufacturing structure is similar to that of the world aggregate. The higher the figure, the greater the specialization in this branch relative to the world average.

Table 16 shows the percentage distribution of manufacturing employment among the 28 manufacturing branches and the annual growth rates for the ASEAN countries. Growth rates for the Philippines for the period after 1980 could not be shown, since the data are not comparable to the earlier period, due to changes in data coverage. Data for Thailand could not be obtained.

Table 17 shows data for the Asean countries by industry at the four-digit level of ISIC, such as wages and salaries per employee, value added per employee, value added by establishment, value added as a percentage of gross output and wages and salaries as a percentage of value added. The data are presented in current dollars. The number of employees refer in the case of Malaysia to those employed at the end of December of the given year, in the case of Singapore to those employed at 30 June of the reference year, no details on the reference period are given for the other countries. The number of establishments included in the reported data refer in the case of Indonesia to those employing 20 or more workers, for Malaysia to all establishments registered under the Industrial Co-ordination Act of 1975. For the Philippines and Singapore the coverage is establishments with 10 or more workers. Since Thailand does not report production data at the four-digit level, Thailand could not be included in table 17.

Table 18 shows imports and exports of goods and services per capita at constant 1980 prices and the per capita growth rates. These data are presented for the individual ASEAN countries, ASEAN as a group, selected country groups and Japan. In this instance, national accounts data are shown.

Table 19 shows the export trade flow of manufactured goods (SITC 5 to 8, less 68) by origin and destination for selected countries and country groups, as a percentage of total manufactured exports.

Table 20 shows the annual growth rates for exports and imports by manufacturing branch as well as the percentage distribution of exports and imports among the 28 manufacturing branches for the ASEAN countries.

Table 21 shows the main manufactured exports of the ASEAN countries, based on value, at the four-digit level of ISIC for 1989 and a comparison to earlier years.

Table 22 shows the main trading partners of the ASEAN countries in products made in selected manufacturing branches. Country groups used in this table differ from those used in the other tables and are more disaggregated.

The countries included in the relevant country groups are given in Appendix I. By presenting only the most significant trading partners, rather than a fixed number (e.g. the three major partners), this table also gives an indication of the concentration or diversification of trade in the selected manufacturing branches.

Table 23 shows net exports (exports less imports) as a percentage of total trade for the 28 manufacturing branches for the ASEAN countries, where the percentages were calculated as:

$$(X_{ij} - M_{ij}) / (X_{ij} + M_{ij}) * 100$$

where X_{ij} = exports in branch i by country j, and
 M_{ij} = imports in branch i by country j

Table 24 presents for the ASEAN countries the ratio of the share of branch i in total export for country j over the share of branch i in total export for the world as an indicator of revealed comparative advantage, using the formula:

$$((X_i/X_w))_j / ((X_i/X_w)_w)$$

where X = exports and subscripts i, w, j and w denote respectively branch i, total manufacturing, country j and world, where world excludes China.

Tables 25, 26 and 27 present data on trade among the ASEAN countries as a percentage of total exports to world. Three broad groups of manufactures were chosen, i.e. "consumer non-durables", "intermediates" and "capital goods". The selected groups are defined as follows:

consumer non-durables: SITC 541, 61, 666, 821, 831, 84, 851 and 89 less 896.

intermediates: SITC 231 less 2311, 243, 251, 2626, 2627, 2628, 2629, 263, 266, 267, 51, 521, 53, 55, 561, 571, 581, 599, 62, 63, 64, 65, 661, 663, 664, 665, 67 and 68.

capital goods: SITC 69, 7, 812 and 86 less 863.

Table 28 shows selected indicators of self-sufficiency, trade dependence and demand-supply balance concerning the 81 manufacturing industries at the four-digit level of ISIC for the ASEAN countries. Output refers to census output. Apparent consumption is defined as output plus imports less exports. Net exports are exports less imports. Total supply is the sum of output and imports. Since Thailand does not report production data at the four-digit level, Thailand could not be included in this table.

Table 29 shows selected indicators of trade in manufactures by end-use and R & D intensity for the ASEAN countries. A classification by end-use and R & D intensity is given in Appendix II.

Tables 30, 31, 32 and 33 are based on data extracted from publications prepared by or obtained directly from the National Statistical Offices. These data are not available for all the ASEAN countries.

Table 30 shows the number of establishments, grouped by the numbers of workers per establishment, for the 28 manufacturing branches, for those ASEAN countries for which data could be obtained.

Table 31 shows the number of establishments by type of ownership for the 28 manufacturing branches for those ASEAN countries for which data could be obtained.

Table 32 shows additions to fixed assets by type of transaction in current dollars for those ASEAN countries for which data could be obtained. The totals given are the sum of new purchases, second-hand purchases, alterations and improvements, less sales.

Table 33 is based on table 32 and shows additions to fixed assets (sales deducted) per establishment as well as the percentage distribution among the 28 manufacturing branches.

Table 34 shows the annual direct foreign investment in the ASEAN countries. The data shown for 1984 to 1990 refer to approved investment and cover all sectors of the economy for Indonesia, the Philippines and Thailand and the manufacturing sector only for Malaysia and Singapore. For earlier years data could only be obtained for average annual foreign investment. The data are compiled by the Institute of Developing Economies, Japan, from national sources.

APPENDIX I
LIST OF COUNTRIES AND AREAS INCLUDED IN SELECTED GROUPINGS
 (ALL TABLES EXCEPT TABLE 22)

| ASEAN | Non-ASEAN Asian developing countries | Non-ASEAN DF | EC | South and East Asian developing countries |
|-------------|--------------------------------------|-------------------|--------------------------|---|
| Indonesia | Bahrain | Argentina | Belgium | Bangladesh |
| Malaysia | Bangladesh | Brazil | Denmark | Bhutan |
| Philippines | Bhutan | Colombia | France | Cambodia |
| Singapore | Cambodia | Cyprus | Germany, Federal Rep. of | Hong Kong |
